From Early Life:

Supplemental guidance for assessing susceptibility from early life exposure to carcinogens, 2005 *Personal Recollections, from Early Life to Old Age, of Mary Somerville* Mary Somerville, 2019-11-26 In *Personal Recollections from Early Life to Old Age of Mary Somerville* the renowned scientist and intellectual Mary Somerville offers a compelling autobiographical account that interweaves her personal experiences with the broader currents of 19th century science and society. Her narrative is marked by a vivid clarity and introspection showcasing not only her pioneering contributions to mathematics and astronomy but also her resilience in navigating a male dominated academic landscape. This work stands as both a testament to her lifelong quest for knowledge and an intricate depiction of the evolving role of women in science during a transformative era. Mary Somerville, often regarded as one of the first female scientists, was deeply influenced by the intellectual environment of her time, characterized by the Enlightenment's emphasis on reason and empirical observation. Her personal struggles, including overcoming societal constraints and educating herself in a variety of scientific disciplines, fueled her determination to contribute meaningfully to her fields of interest. This work encapsulates not only her biography but serves as a broader commentary on women's intellectual empowerment during the Victorian period. For readers interested in the intersection of science, feminism, and history, Somerville's recollections illuminate the significant challenges and triumphs of a pioneering woman in the sciences. This book is an essential read for anyone seeking inspiration from an extraordinary life dedicated to knowledge and advancement in the face of adversity.

Early Life Origins of Ageing and Longevity Alexander Vaiserman, 2019-07-29 This book provides a comprehensive overview of the field of developmental programming of ageing phenotypes. Although gerontological research has traditionally focused on later stages of the life cycle, growing evidence indicates that both the rate of ageing-associated functional declines and the risks of later life chronic pathological conditions can be traced to origins early in life. While other books in the field concentrate on the developmental origin of particular disorders, this volume offers a detailed guide to all important aspects of the role of early life conditions in programming both chronic pathological conditions and the ageing process. Interest in the study of ageing and longevity had its beginnings in research on the fetal origins of adult disease. This has evolved into a hypothesis on the Developmental Origins of Adult Health and Disease (DOHaD) which postulates that adverse environmental exposures during critical in utero and early postnatal stages of development may permanently change physiological responses and cause functional impairments and disorders in adult life. In this book, the contributing authors and leading experts from around the world describe research on mechanisms underlying the developmental programming phenomenon as well as interventional strategies aimed at restoring developmentally disrupted epigenetic patterns. *Early Life Origins of*
