Ocular Motility and Strabismus Marshall M. Parks,1975 **Diagnostic Imaging in Ophthalmology** Carlos F. Gonzales,Melvin H. Becker,Joseph C. Flanagan,2012-12-06 This book has been written for radiologists ophthalmologists neurologists neurosurgeons plastic surgeons and others interested in the evaluation of disorders with ophthalmologic signs and symptoms It is designed to provide recent knowledge in this area derived from ultrasonography computed tomography CT and magnetic resonance imaging MRI In the past decade the advent of ultrasonography computed tomography and more recently magnetic resonance imaging has provided diagnostic images of the eye orbit and brain in a fashion that had been a dream of many prior to the development of these techniques These newer modes of diagnosis have replaced some previous techniques such as nuclear medicine imaging and to some degree vascular studies and orbitography There are three sections to this book The first section is a discussion of the imaging techniques The second is devoted to the role of these imaging methods in the evaluation of ophthalmic disorders The last section dealing with radiotherapy for ophthalmologic tumors is included because the current imaging techniques are needed for treatment planning We wish to thank the many people who have assisted us in preparing this manuscript Among these are many librarians secretaries trainees and photographers We are especially indebted to artist Peter Clark for his illustrations and to Mr Martin Leibo vici Associate Curator of New York University Medical School and Director of Health Sciences Library of Goldwater Memorial Hospital New York City Also we wish to thank our families for their help and patience **Perceiving in Depth, Volume 1** Ian P. Howard,2012-02-24 The three volume work Perceiving in Depth is a sequel to Binocular Vision and Stereopsis and to Seeing in Depth both by Ian P Howard and Brian J Rogers This work is much broader in scope than the previous books and includes mechanisms of depth perception by all senses including aural electrosensory organs and the somatosensory system Volume 1 reviews sensory coding psychophysical and analytic procedures and basic visual mechanisms Volume 2 reviews stereoscopic vision Volume 3 reviews all mechanisms of depth perception other than stereoscopic vision The three volumes are extensively illustrated and referenced and provide the most detailed review of all aspects of perceiving the three dimensional world Volume 1 starts with a review of the history of visual science from the ancient Greeks to the early 20th century with special attention devoted to the discovery of the principles of perspective and stereoscopic vision The first chapter also contains an account of early visual display systems such as panoramas and peepshows and the development of stereoscopes and stereophotography A chapter on the psychophysical and analytic procedures used in investigations of depth perception is followed by a chapter on sensory coding and the geometry of visual space An account of the structure and physiology of the primate visual system proceeds from the eye through the LGN to the visual cortex and higher visual centers This is followed by a review of the evolution of visual systems and of the development of the mammalian visual system in the embryonic and post natal periods

with an emphasis on experience dependent neural plasticity An account of the development of perceptual functions especially depth perception is followed by a review of the effects of early visual deprivation during the critical period of neural plasticity on amblyopia and other defects in depth perception Volume 1 ends with accounts of the accommodation mechanism of the human eye and vergence eye movements **Current Catalog** National Library of Medicine (U.S.),1982 First multi year cumulation covers six years 1965 70 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1982 **Fundamentals of Neurosurgery** Andrei Fernandes Joaquim, Enrico Ghizoni, Helder Tedeschi, Mauro Augusto Tostes Ferreira, 2019-07-12 The aim of this book is to provide clinicians and medical students with basic knowledge of the most common neurosurgical disorders There is a vast array of signs and symptoms that every clinician should recognize as neurosurgical affectations allowing them to identify when to refer the patient to a neurosurgeon In this text the editors intend to bridge the gap between clinical medicine and neurosurgery making neurosurgical practice understandable to a wider medical public The book provides a smooth transition from neuroanatomy neurophysiology and neurological examination to neurosurgery focusing more on the knowledge underlying neurosurgical practice rather than on surgical technique The core of the book is composed of chapters discussing each of the most important medical conditions that deserve neurosurgical intervention providing key information on diagnosis clinical aspects disease management surgical procedures and prognosis Moreover complementary discussion of the frontiers and advances in neurosurgery are also covered In this sense this book has two main goals and intended audiences First and primarily it is intended for clinicians in a wide array of non surgical medical specialties such as general practitioners neurologists pediatricians oncologists and others aiming to give an overview on important characteristics and initial management of the most prevalent disorders treated by neurosurgeons Second and to a lesser degree it is intended to be used as a practical guide for medical students who are initiating their study in neurosurgical sciences **Fundamentals of Neurosurgery A Guide for Clinicians and Medical Students** intends to be a comprehensive guide for all non neurosurgeons who want to broaden their knowledge of neurosurgery

The Skeffington Perspective of the Behavioral Model of Optometric Data Analysis and Vision Care Earl P. Schmitt O.D Ed.D D.O.S., 2006-04-28 No systematic analysis of optometric clinical data can be undertaken unless the findings are referred to a logical model that allows comparisons to be made of interaction characteristics that exist between the accommodative and convergence mechanisms inherent to the human vision system Concomitantly many of the concepts applied during any such analytical process are based on hypothetical constructs This text re examines the elements originally proposed by Dr A M Skeffington and offers a revised insight into how performance changes may occur as individual visual behavior adapts to the impact of environmental demands In depth research and extensive references attempt to substantiate the Skeffington paradigm of professional vision analysis Long standing challenges to the optometric profession are identified As presented the contents are appropriate for use as a classroom text for reference and for identifying areas for clinical research
