Automating Linguistics Jacqueline Léon, 2021-04-26 Automating Linguistics offers an in depth study of the history of the mathematization and automation of the sciences of language In the wake of the first mathematization of the 1930s two waves followed machine translation in the 1950s and the development of computational linguistics and natural language processing in the 1960s These waves were pivotal given the work of large computerised corpora in the 1990s and the unprecedented technological development of computers and software Early machine translation was devised as a war technology originating in the sciences of war amidst the amalgamate of mathematics physics logics neurosciences acoustics and emerging sciences such as cybernetics and information theory Machine translation was intended to provide mass translations for strategic purposes during the Cold War Linguistics in turn did not belong to the sciences of war and played a minor role in the pioneering projects of machine translation Comparing the two trends the present book reveals how the sciences of language gradually integrated the technologies of computing and software resulting in the second wave mathematization of the study of language which may be called mathematization automation The integration took on various shapes contingent upon cultural and linguistic traditions USA ex USSR Great Britain and France By contrast working with large corpora in the 1990s though enabled by unprecedented development of computing and software was primarily a continuation of traditional approaches in the sciences of language sciences such as the study of spoken and written texts lexicography and statistical studies of vocabulary **Journal of Linguistics**, 1983

Quantification and Syntactic Theory R. Cooper, 2013-03-09 The format of this book is unusual especially for a book

about linguistics The book is meant primarily as a research monograph aimed at linguists who have some background in formal semantics e.g. Montague Grammar However I have two other audiences in mind Linguists who have little or no experience of formal semantics but who have worked through a basic mathematics for linguists course e.g. using Wall 1972 or Partee 1978 should perhaps with the help of a sympathetic Montague grammarian be able to discover enough of how I have adapted some of the basic ideas in formal semantics to make the developments that I undertake in the rest of the book accessible Logicians and computer scientists who know about model theoretic semantics and formal systems should be able to glean enough from Chapters I and II about linguistic concerns and techniques to be able to read the remainder of the book again possibly with the help of a sympathetic Montague grammarian However readers should beware Chapter II is not meant as a general introduction either to formal semantics or to linguistics and while much of the presentation there is going over ground that is already well covered in the literature the particular formulation and the emphases are very much oriented to the developments to be undertaken later in the book

Theoretical Foundations, 2019-05-20 No detailed description available for Theoretical Foundations

The Prague School of Structural and Functional Linguistics Philip A. Luelsdorff, 1994-11-07 The importance of the Prague School for the rise of structuralism and for integration of the theoretical linguistics of today can hardly be overestimated The volume brings together 13 papers showing the main results of the research of the Prague School and of its continuation in the domains of phonemics and written language morphemics and word formation lexicon syntax and semantics text structures stylistics and typology The authors all actively contributed to the domain they are treating here

Edge-based Clausal Syntax Paul Martin Postal, 2010 An argument that there are three kinds of English grammatical objects each with different syntactic properties In *Edge Based Clausal Syntax* Paul Postal rejects the notion that an English phrase of the form V DP invariably involves a grammatical relation properly characterized as a direct object He argues instead that at least three distinct relations occur in such a structure The different syntactic properties of these three kinds of objects are shown by how they behave in passives middles able forms tough movement wh movement Heavy NP Shift Ride Node Raising re prefixation and many other tests This proposal renders Postal's position sharply different from that of Chomsky who defined a direct object structurally as NP VP and with the traditional linguistics text's definition of the direct object as the DP sister of V According to Postal's framework sentence structures are complex graph structures built on nodes vertices and edges arcs The node that

heads a particular edge represents a constituent that bears the grammatical relation named by the edge label to its tail node This approach allows two DPs that have very different grammatical properties to occupy what looks like identical structural positions The contrasting behaviors of direct objects which at first seem anomalous even grammatically chaotic emerge in Postal's account as nonanomalous as symptoms of hitherto ungrasped structural regularity The Alternative Mathematical Model of Linguistic Semantics and Pragmatics Vilém Novák, 2013-06-29 In opposition to the classical set theory of natural language Novák's highly original monograph offers a theory based on alternative and fuzzy sets This new approach is firmly grounded in semantics and pragmatics and accounts for the vagueness inherent in natural language filling a large gap in our current knowledge The theory will foster fruitful debate among researchers in linguistics and artificial intelligence
