Keith M. Zinn

Fundus Periphery:

The Fundus Periphery Pierre Bec, 1985 **Clinical Atlas of Peripheral Retinal Disorders** Keith M. Zinn, 2012-12-06 A comprehensive understanding of diseases of the peripheral retina is essential to the general ophthalmologist as well as to the vitreoretinal surgeon Expertise in direct ophthalmoscopy scleral depression and contact lens biomicroscopy serves as a basis for observing the peripheral retina These observations are then recorded on fundus drawing paper and the Tolentino vitreo retinal chart This orderly sequence of skills allows the ophthalmic surgeon to objectively diagnose and evaluate specific peripheral retinal disorders and plan for their therapeutic management The Clinical Atlas of Peripheral Retinal Disorders is a compilation of fundus paintings by David A Tilden based on our observations of a large number of patients over the past 15 years The atlas is organized along functional and anatomical lines After a brief introduction to the clinical anatomy of the peripheral retina the appearance of the fundus as a function of skin color and aging is presented Many of the diseases of the peripheral retina can be divided into trophic nutritional tractional and a combination of trophic plus tractional etiologies This classification system although somewhat simplistic appears adequate for our present level of understanding of the pathogenetic mechanisms of these disorders Undoubtedly once the molecular biology of these conditions is elucidated through future research the classification will be revised In addition there are other conditions that affect the peripheral retina that do not fit the proposed classification system and are covered under separate headings i e Dominant Exudative Vitreoretinopathy and other Vascular Developmental Disorders of the Peripheral Retina C.E. van Nouhuys, 2012-12-06 Dominant exudative vitreoretinopathy DEVR is an eye disease which has only recently received wider attention In 1969 Criswick and Schepens used the designation familial exudative vitreoretinopathy to describe a syndrome they observed in six patients belonging to two families The condition was characterized by several symptoms involving the vitreous and retina e g posterior vitreous detachment organized vitreous membranes heterotopia of the macula retinal neovascularizations subretinal and intraretinal exudates and localized retinal detachment The clinical features impressed the authors as strongly reminiscent of retrolental fibroplasia but none of the patients had a record of premature birth or postnatal oxygen administration In 1971 Cow and Oliver described the same syndrome in several members of one family They considered their findings to be compatible with autosomal dominant transmission Canny and Oliver 1976 were the first to demonstrate the fluorescein angiographic changes of DEVR in four members of the abovementioned family The most striking finding was abrupt cessation of the capillary network in a scalloped edge near the equator Fluorescein was seen to leak from the retinal vessels localized in this marginal zone and in some eyes from massive fibrovascular lesions as well Similar fluorescein angiographic changes have been described in recent years in other reports on families with DEVR Nijhuis et al 1979 Slusher and Hutton 1979 Dudgeon 1979 Ober et al 1980 Laqua 1980 In 1979 I commenced a clinical study of this still little known condition at the Nijmegen University Institute of Ophthalmology The Netherlands *The Eye Exam* Gary S. Schwartz, 2006

The Ophthalmic Exam An Introduction to Techniques and Instrumentation for Evaluation is an excellent reference for everyone new to the eye clinic With a primary focus on developing history and exam skills this handy reference delivers the fundamentals on a range of physical exam topics including refraction retina exam and alignment Written in an easy and practical format The Ophthalmic Exam presents the proper way to perform a history and physical examination on an eye patient The opening chapter will educate the reader on how to perform an eye history on adults and children Also included are chapters on the foundation of basic optics and how to perform a proper distance and near refraction exams The book concludes by teaching the reader how to perform various examination techniques and how to record the findings Dr Gary Schwartz includes only the essential information about ophthalmic examinations so as to not bog down the reader with in depth information about diseases Important concepts are reinforced by including a helpful question and answer section at the end of most chapters The Ophthalmic Exam is perfect for the eye clinic novice wanting to learn the basics and increase their familiarity with performing routine eye exams as well as the experienced physician looking to fine tune their skills Physical Exam topics include Subjective and Objective Refraction Near Refraction Color vision Pupil exam Motilities Alignment Slit lamp examination Intraocular pressure determination Gonioscopy and Retina examination **Ryan's Retina**
