

## Mycoparasitism

The BCA directly attacks and parasitizes the pathogen. Moreover, some BCAs have a predatory behaviour under nutrient-limited conditions, this phenomenon is described as "microbial predation".

## Competition

## Nutrients

Macronutrients and micronutrients (e.g. carbohydrate and nitrogen sources, Fe subtraction, etc.)

## Space

Colonizing plant/fruit wounds, the BCA plays a key role in preventing pathogen attack (e.g. coping with ROS, biofilm formation, "site exclusion").

## Antibiosis

Production of antimicrobial diffusible or volatile compounds (lytic enzymes, antibiotics, VOCs, etc.)

## BCAs

## Induction of plant resistance

ISR (Induced Systemic Resistance) is mediated by JA and ET signals that can induce different responses in the plants, for example, accumulation of lignin, callose, low molecular weight antimicrobial substances, synthesis of various proteins such as pathogenesis-related (PR) and other bacterial and fungal elicitors (lipopolysaccharides, siderophores, etc.)

Snini, 2020-11-25 Mycotoxins are toxic secondary metabolites produced by fungi They cause deleterious effects on humans animals and plants More than one hundred mycotoxins are known which contaminate food and feed raw materials Fungal infection and mycotoxin contamination can occur directly in fields pre harvest stage during storage or during industrial processing post harvest stage Given the proven toxicity of mycotoxins and their widespread distribution it is necessary to prevent their occurrence in food and feed To limit mycotoxin contamination several techniques can be adopted at the pre harvest or post harvest stages These techniques can reduce mycotoxin concentration through fungal growth reduction or mechanisms leading to mycotoxin degradation or mycotoxin detoxification i.e reduction of the toxicity Until very recently fungicides were favored to limit mycotoxin contamination by reducing fungal growth Nonetheless the sanitary and environmental impacts of these products and their effects on food quality encourage the development of alternative strategies based on biocontrol agents BCAs or

natural compounds Moreover in some cases fungal growth reduction can stimulate mycotoxin production The focus of this Special Issue of Toxins is to gather the most recent advances related to reducing mycotoxin contamination in food and feed using BCAs and natural compounds In this context two main types of approaches can be proposed Preventive methods that could be applied in the field during storage or during industrial processing and curative methods that detoxify contaminated matrices by eliminating the produced mycotoxin
