The Future is Now Eric Cohen, William Kristol, 2002 This book looks at both the past and the future of the debate over whether there are moral limits to scientific progress and what life will look like in the genetic age *Future Is Now* William Kristol, 2002-01-01 The Future Is Now looks both to the past and the future of the genetics debate It includes articles essays speeches and testimony from genetic enthusiasts and critics scientists and moralists politicians and scholars Transformed States Martin Halliwell, 2024-11-15 Transformed States offers a timely history of the politics ethics medical applications and cultural representations of the biotechnological revolution from the Human Genome Project to the COVID 19 pandemic In exploring the entanglements of mental and physical health in an age of biotechnology it views the post Cold War 1990s as the horizon for understanding the intersection of technoscience and culture in the early twenty first century The book draws on original research spanning the presidencies of George H W Bush and Joe Biden to show how the politics of science and technology shape the medical uses of biotechnology Some of these technologies reveal fierce ideological conflicts in the arenas of cloning reproduction artificial intelligence longevity gender affirmation vaccination and environmental health Interweaving politics and culture the book illustrates how these health issues are reflected in and challenged by literary and cinematic texts from Oryx and Crake to Annihilation and from Gattaca to Avatar By assessing the complex relationship between federal politics and the biomedical industry Transformed States develops an ecological approach to public health that moves beyond tensions between state governance and private enterprise To that end Martin Halliwell analyzes thirty years that radically transformed American science medicine and policy positioning biotechnology in dialogue with fears and fantasies about an emerging future in which health is ever more contested Along with the two earlier books Therapeutic Revolutions 2013 and Voices of Mental Health 2017 Transformed States is the final volume of a landmark cultural and intellectual history of mental health in the United States journeying from the combat zones of World War II to the global emergency of COVID 19 Geopolitics and the Great Powers in the 21st Century C. Dale Walton, 2007-06-11 This book argues that in the twenty first century Eastern Eurasia will replace Europe as the theatre of decision in international affairs and that this new geographic and cultural context will have a strong influence on the future of world affairs For half a millennium the great powers have practised what might be called world politics yet during that time Europe and small portions of the Near East and North Africa strategically vital to Europe were the centres of gravity in international politics This book argues that the unipolar moment of the post Cold War era will not be replaced by a US China Cold War but rather by a long period of multipolarity in the twenty first century Examining the policy goals and possible military political strategies of several powers this study explains how Washington may play a key role in eastern Eurasian affairs if it can learn to operate in a very different political context Dale Walton also considers the rapid pace of technological change and how it will impact on great power politics Considering India China the US Russia Japan and other countries as part of a multipolar

system he addresses the central questions that will drive US policy in the coming decades Geopolitics and the Great Powers in the 21st Century will be of interest to students of international security military history geopolitics and international relations

Cloning Stephen D. Fairbanks, 2004 The terms recombinant DNA technology DNA cloning molecular cloning or gene cloning all refer to the same process the transfer of a DNA fragment of interest from one organism to a self replicating genetic element such as a bacterial plasmid The DNA of interest can then be propagated in a foreign host cell This technology has been around since the 1970s and it has become a common practice in molecular biology labs today Reproductive cloning is a technology used to generate an animal that has the same nuclear DNA as another currently or previously existing animal Dolly was created by reproductive cloning technology In a process called somatic cell nuclear transfer SCNT scientists transfer genetic material from the nucleus of a donor adult cell to an egg whose nucleus and thus its genetic material has been removed The reconstructed egg containing the DNA from a donor cell must be treated with chemicals or electric current in order to stimulate cell division Once the cloned embryo reaches a suitable stage it is transferred to the uterus of a female host where it continues to develop until birth Therapeutic cloning also called embryo cloning is the production of human embryos for use in research The goal of this process is not to create cloned human beings but rather to harvest stem cells that can be used to study human development and to treat disease Stem cells are important to biomedical researchers because they can be used to generate virtually any type of specialised cell in the human body This new book presents an up to date Chronology of Cloning along with current and selected abstracts dealing with cloning as well as a guide to books on the topic Access to the abstract and books sections is provided by title subject and author indexes

The Ethics of Human Enhancement Steve Clarke, Julian Savulescu, C. A. J. Coady, Alberto Giubilini, Sagar Sanyal, 2016-10-13 We humans can enhance some of our mental and physical abilities above the normal upper limits for our

species with the use of particular drug therapies and medical procedures We will be able to enhance many more of our abilities in more ways in the near future Some commentators have welcomed the prospect of wide use of human enhancement technologies while others have viewed it with alarm and have made clear that they find human enhancement morally objectionable The Ethics of Human Enhancement examines whether the reactions can be supported by articulated philosophical reasoning or perhaps explained in terms of psychological influences on moral reasoning An international team of ethicists refresh the debate with new ideas and arguments making connections with scientific research and with related issues in moral philosophy

The End Mark Hatch, 2006-10-06 A few vocal futurists have publicly admitted that we are likely to destroy ourselves by the year 2050 Many more admit that for the first time in human history we cannot confidently predict the broad outlines of the human condition a mere 50 years from now Here is a fascinating look at why many of today's scientists and futurists believe the end is near and how that should inform our Christian journey Pointing out that secular and Christian observers can already see that we have entered the final season this resource explores credible doomsday scenarios and compares those theories with the biblical indicators of the very last days This is a call to live our lives with commitment and consistency in light of the end's reality and proximity

Biotechnology and the Human Good C. Ben Mitchell, 2007-04-23 Some of humankind's greatest tools have been forged in the research laboratory Who could argue that medical advances like antibiotics blood transfusions and pacemakers have not improved the quality of people's lives But with each new technological breakthrough there comes an array of consequences at once predicted and unpredictable beneficial and hazardous Outcry over recent developments in the reproductive and genetic sciences has revealed deep fissures in society's perception of biotechnical progress Many are concerned that reckless technological development driven by consumerist

impulses and greedy entrepreneurialism has the potential to radically shift the human condition and not for the greater good Biotechnology and the Human Good builds a case for a stewardship deeply rooted in Judeo Christian theism to responsibly interpret and assess new technologies in a way that answers this concern The authors jointly recognize humans not as autonomous beings but as ones accountable to each other to the world they live in and to God They argue that to question and critique how fields like cybernetics nanotechnology and genetics might affect our future is not anti science anti industry or anti progress but rather a way to promote human flourishing common sense and good stewardship A synthetic work drawing on the thought of a physician ethicists and a theologian Biotechnology and the Human Good reminds us that although technology is a powerful and often awe inspiring tool it is what lies in the heart and soul of who wields this tool that truly makes the difference in our world

Imperiled Whiteness Penelope Ingram, 2023-06-23 In *Imperiled Whiteness* Penelope Ingram examines the role played by media in the resurgence of white nationalism and neo Nazi movements in the Obama to Trump era As politicians on the right stoked anxieties about whites losing ground and being left behind media platforms turned whiteness into a commodity that was packaged and disseminated to a white populace Reading popular film and television franchises Planet of the Apes Star Trek and The Walking Dead through political flashpoints such as debates over immigration reform gun control and Black Lives Matter protests Ingram reveals how media cultivated feelings of white vulnerability and loss among white consumers By exploring the convergence of entertainment news and social media in a digital networked environment Ingram demonstrates how media s renewed attention to imperiled whiteness enabled and sanctioned the return of overt white supremacy exhibited by alt right groups in the Unite the Right rally in Charlottesville in 2017 and the Capitol riots in 2021

The Fountain of Youth Stephen G. Post, Robert H. Binstock, 2004-04-08 A wide variety of ambitions and measures to slow stop and reverse phenomena associated with aging have been part of human culture since early civilization From alchemy to cell injections to dietary supplements the list of techniques aimed at altering the processes of aging continues to expand Charlatans quacks and entrepreneurs proffering anti aging products and practices have always exploited uniformed customers and instilled doubt and apprehension toward practices intended to extend life Recently however the pursuit of longevity has developed into a respectable scientific activity Many biologists are substantially funded by the government and the private sector to conduct research that they believe will lead to effective anti aging interventions While many embrace this quest for prolongevity extended youth and long life others fear its

consequences If effective anti aging interventions were achieved they would likely bring about profound alterations in the experiences of individual and collective life What if aging could be decelerated to the extent that both average life expectancy and maximum life span would increase by forty percent What if all humans could live to be centenarians free of the chronic diseases and disabilities now commonly associated with old age What if modern scientists could find the modern equivalent to the Fountain of Youth that Ponce de Leon sought This book addresses these questions by exploring the ramifications of possible anti aging interventions on both individual and collective life Through a series of essays it examines the biomedical goal of prolongevity from cultural scientific religious and ethical perspectives offering a sweeping view into the future of aging
