Future Of Freedom In Rubia:

Still Sings the Nightbird Philo Ikonya, 2013-06-24 Do we live inside the breasts of our mothers In the mind and hearts of two women indeed at their breasts a nation lives The whole universe is in the lives of the people Philo writes about They hear the song of the nightjar and it has meaning Inside a mothers chest her daughter hangs like a silent unvenerated Pieta Wakabi has eyes inside her breast She sees from inside there She knows this story well A countrys literature is rooted in its history But when history is full of hardship can authors create books pregnant with optimism In *Still Sings the Nightbird* Philo Ikonya defies the currents of hopelessness to point her readers to a glimmer of light at the end of the tunnel of nightmares Out of the lonely cry of a nightjar the rape of Kabi and indeed of Kenya appears a light beaming into a brighter future

Scientific Modeling and Simulations Sidney Yip,Tomas Diaz Rubia,2010-04-07 Although computational modeling and simulation of material deformation was initiated with the study of structurally simple materials and inert environments there is an increasing demand for predictive simulation of more realistic material structure and physical conditions In particular it is recognized that applied mechanical force can plausibly alter chemical reactions inside materials or at material interfaces though the fundamental reasons for this chemomechanical coupling are studied in a material specific manner Atomistic level simulations can provide insight into the unit processes that facilitate kinetic reactions within complex materials but the typical nanosecond timescales of such simulations are in contrast to the second scale to hour scale timescales of experimentally accessible or technologically relevant timescales Further in complex materials these key unit processes are rare events due to the high energy barriers associated with those processes Examples of such rare events include unbinding between two proteins that tether biological cells to extracellular materials 1 unfolding of complex polymers stiffness and bond breaking in amorphous glass fibers and gels 2 and diffusive hops of point defects within crystalline alloys 3
