Ecosystems and Human Well-Being Millennium Ecosystem Assessment (Program). Sub-global Assessments Working Group, 2005-12-14 One of the major innovations of the Millennium Ecosystem Assessment is the incorporation of local and regional assessments 33 in all in a global portrait of the planet's health It is the first global assessment of ecosystems to include not only a diversity of ecosystems but to draw on a wide range of cultural orientations and intellectual traditions including those of indigenous peoples The Sub global Assessments Working Group integrated information from multiple sources and found that biophysical factors such as land use change climate change and variability pollution and invasive species have a significant effect on human well being across cultures For example in places where there are no other social safety nets diminished human well being tends to increase immediate dependence on ecosystem services which can damage the capacity of those local ecosystems which in turn appears to increase the probability of natural disaster or conflict Representing the baseline and framework for ongoing assessments of ecosystem and human well being on a variety of scales around the world Multiscale Assessments provides students researchers and policy makers with the most comprehensive methodology for assessing ecosystems at local national and regional scales Ecosystems and Human Well-being, 2005 Of the MA conceptual framework Overview of the MA sub global assessments Linking ecosystem services and human well being in the sub global assessments The multiscale approach Using multiple knowledge systems in sub global assessments benefits and challenges Assessment process Drivers of ecosystem change Condition and trends of ecosystem services and biodiversity Responses to ecosystem changes and their impacts on human well being lessons from sub global assessments Sub global scenarios Communities ecosystems and livelihoods Reflections and lessons learned Ecosystems and Human Well-Being Neville Ash, 2010-04-05 The Millennium Ecosystem Assessment MA is the most extensive study ever of the linkages between the world's ecosystems and human well being It is one of the most important conservation initiatives ever undertaken and the ecosystem services paradigm on which it is based provides the standard for practice This manual supplies the specific tools that practitioners of the paradigm need in order to extend their work into the future The manual is a stand alone how to guide to conducting assessments of the impacts on humans of ecosystem changes It builds on the experiences and lessons learned from the MA global and sub global assessment initiatives with chapters written by well known participants in those initiatives It also includes insights gained from service focused assessment activities since the completion of the MA in 2005

Restoring Natural Capital James Aronson, Suzanne J. Milton, James N. Blignaut, 2012-09-26 How can environmental degradation be stopped How can it be reversed And how can the damage already done be repaired The authors of this volume argue that a two pronged approach is needed reducing demand for ecosystem goods and services and better management of them coupled with an increase in supply through environmental restoration Restoring Natural Capital brings together economists and ecologists theoreticians practitioners policy makers and scientists from the developed and developing worlds to consider the costs and benefits of repairing ecosystem goods and services in natural and socioecological systems It examines the business and practice of restoring natural capital and seeks to establish common ground between economists and ecologists with respect to the restoration of degraded ecosystems and landscapes and the still broader task of restoring natural capital The book focuses on developing strategies that can achieve the best outcomes in the shortest amount of time as it considers conceptual and theoretical issues from both an economic and ecological perspective examines specific strategies to foster the restoration of natural capital and offers a synthesis and a vision of the way forward Nineteen case studies from around the world illustrate challenges and achievements in setting targets refining approaches to finding and implementing restoration projects and using restoration of natural capital as an economic opportunity Throughout contributors make the case that the restoration

of natural capital requires close collaboration among scientists from across disciplines as well as local people and when successfully executed represents a practical realistic and essential tool for achieving lasting sustainable development

Ecosystem Services Mark Everard, 2021-12-30

Revised and fully updated this textbook provides a detailed yet accessible introduction to the key aspects of ecosystem services. Ecosystem services is one of the most powerful guiding principles for ecology, biodiversity conservation and the management of natural resources. It provides the basis of assessing the multiple values and services that ecosystems can provide to humankind, including diverse issues such as carbon sequestration, flood control, crop pollination and aesthetic and cultural services. The second edition of *Ecosystem Services: Key Issues* has been fully revised and updated to address policy and scientific developments as well as new and emerging issues such as nature-based solutions, zoonotic diseases and environmental justice. It includes new and updated case studies from across the world and each chapter contains further reading, learning objectives and discussion questions to aid student learning. The book details the historical roots of ecosystem services in the second half of the twentieth century through initiatives such as the Millennium Ecosystem Assessment, The Common International Classification of Ecosystem Services (CICES) and the United Nations Sustainable Development Goals. It shows how ecosystem goods and services can be categorised and valued in economic as well as non-monetary terms while also highlighting some of the difficulties and limitations of valuation techniques. The author describes how themes such as systems thinking, social ecological resilience and natural capital relate to ecosystem services and how these can contribute to more sustainable and equitable development. This book will be essential reading for students and scholars of ecosystem services, ecology, environmental science, biodiversity conservation, environmental economics, natural resource management and sustainable development. It will also be of use to professionals and policymakers who are looking to integrate ecosystems and their services into their decision-making processes.

Integrating Climate Change Actions into Local Development Livia Bizikova, John Robinson, Stewart Cohen, 2015-02-13 To date, climate change adaptation and mitigation have been treated separately both in research and in the climate negotiations. However, a growing body of literature is now being developed that points to actual and potential synergies and trade-offs between responses to climate change and sustainability. This literature has evolved in a spontaneous way with diverse approaches and no common methodology to help practitioners explicitly plan for these synergies. This special issue of the *Climate Policy* journal addresses this gap between scientific knowledge and practitioners' needs by focussing on linkages between climate change and sustainable development at the level of conceptual framework and methods. In particular, the papers address in an integrated way local development options involving both adaptation and mitigation in order to promote resilience to climate change in human and natural systems. The special issue provides policy and methodological guidelines for linking local development pathways with responses to climate change based on collaboration between local practitioners, the public and scientists.

Sacred Ecology Fikret Berkes, 2017-09-01 *Sacred Ecology* examines bodies of knowledge held by indigenous and other

rural peoples around the world and asks how we can learn from this knowledge and ways of knowing Berkes explores the importance of local and indigenous knowledge as a complement to scientific ecology and its cultural and political significance for indigenous groups themselves With updates of relevant links for further learning and over 180 new references the fourth edition gives increased voice to indigenous authors and reflects the remarkable increase in published local observations of climate change
