Strategies for Engineered Negligible Senescence International Association of Biomedical Gerontology. International Congress,2004 This volume focuses squarely on the fact that as a result of a wide range of advances over recent years increasingly many specialists in the biology of aging are revising their traditional view that mammalian aging will remain essentially immutable for many decades to come This is exemplified by three carefully argued analyses of the current state of biomedical gerontology published recently by a variety of experts in fields spanning most major aspects of mammalian aging We are therefore at an unprecedented turning point in the study of aging in which the curiosity driven exploratory research that has justifiably monopolized the field until now can at last be legitimately accompanied by goal directed biotechnological efforts rationally designed on the basis of solid scientific knowledge The purpose of this volume is to consolidate that advance by making those at the forefront of each aspect of aging and its control more aware of each other's work and by drawing attention to the comprehensiveness and therefore the potential efficacy of foreseeable anti aging biotechnology

Barbagallo-Sangiorgi,A.N. Exton-Smith,2012-12-06 One of the greatest advances in Geriatric Medicine during the last quarter of a century has been the increased realization of the possibilities of treatment for elderly patients Neglect has been replaced by a more optimistic therapeutic endeavour and countless old people have benefitted from this approach But there is also a drawback and this is the risk of hazardous side effects of medication which are often directly proportional to the biological potency of the drug and may be unpredictably increased due to changes in the senile organism In fact the anatomical and biological changes in old age alter both the kinetics of most drugs and the receptor response On account of these changes the individual tolerance of aged patients to drug therapy may be quite different from that of younger subjects Thus for a variety of reasons elderly patients receive more drugs but they are at a higher risk of encountering adverse reactions which often show atypical clinical features We can therefore speak of geriatric iatrogenic disorders and point out that some of these side effects are determined by a complex pathogenesis due to the particular pathophysiological condition in the elderly It is important to encourage the habit of individually evaluating potential risk versus expected advantages of drugs in keeping with the same principles adopted in the evaluation of cost benefit ratio **Drugs and the Elderly** James Crooks,Ian H.
