Geomorphology and Sedimentology of Estuaries Gerardo M.E. Perillo, 1995-05-16 Approx 470 pages *High Resolution Morphodynamics and Sedimentary Evolution of Estuaries* Duncan M. FitzGerald, Jasper Knight, 2007-07-05 Estuaries occur along many of the world's coastlines irrespective of geologic setting energy regime and depositional environment They represent the interface between fluvial coastal and marine environments and they contain the sedimentary record of geological changes among these systems However detailed case studies on the morphodynamics and sedimentary evolution of different estuarine environments are notably lacking This book focuses on the use of high resolution geophysical techniques field observations and modeling to investigate the morphodynamics of estuaries on both glaciated and non glaciated coasts and on different time scales Papers in this book offer a new approach to nearshore and estuary studies with an emphasis on multidisciplinary techniques and data integration Results of these studies have important implications for estuary resource management and shoreline stability This book will be of interest to sedimentologists coastal and Quaternary geologists environmental scientists and coastal managers

Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and

Blue Carbon Reservoir of the Blue Planet Abhijit Mitra, Sufia Zaman, 2014-11-20 The ever increasing emission of carbon dioxide due to rapid industrialization urbanization unplanned tourism and alteration of land use pattern is causing unprecedented changes to marine biodiversity Irrespective of political philosophy nation caste sex and religion mankind is under the appalling

shadow of climate change Today nature based approaches for the mitigation of climate change are increasingly accepted as part of the low cost solution Thrust has been given by several scientific communities to assess the magnitude and viability of carbon sequestering potential of plants Coastal producer communities like mangroves salt marsh grass seagrass beds and seaweeds absorb atmospheric carbon dioxide during the process of photosynthesis This carbon known as the blue carbon is thus associated with the marine and estuarine ecosystems However a number of gaps in our scientific knowledge on blue carbon domain still exist Molluscs coral reefs phytoplankton which are amongst the important storehouses of carbon have not been addressed Very few scientific studies on the carbon stored in these valuable natural vaults have been performed and no data bank is available on their carbon sequestering capacity on global basis The methodologies for assessing blue carbon stock also need further standardization so that credit from blue carbon reservoir is accepted by the International bodies in the form of a concrete policy It is a matter of great appreciation that Conservation International CI the International Union for Conservation of Natural Resources IUCN and the Intergovernmental Oceanic Commission IOC of UNESCO is collaborating with governments research institutions non governmental and international organizations and communities around the world to develop management approaches financial incentives and policy mechanisms for ensuring conservation and restoration of blue carbon ecosystems and implement projects around the world that demonstrate the feasibility of blue carbon accounting management and incentive agreements The present book has critically presented the data bank for each community of blue carbon not merely in the form of text description but also through case studies that are the outcomes of research projects and pilot programmes

Pharmaceuticals in Marine and Coastal Environments Juan Carlos Duran-Alvarez, Blanca Jiménez-Cisneros, 2021-06-23 Pharmaceuticals in Marine and Coastal Environments Occurrence Effects and Challenges in a Changing World is divided into three sections that address a coastal areas as the main entrance of pharmaceuticals into the ocean b the occurrence and distribution of pharmaceuticals in the environmental compartments of the ocean media and c the effects that such pollutants may cause to the exposed marine organisms With its comprehensive discussions the book provides a wide depiction of the current state of the art on these topics in an effort to open new sources of investigation and find suitable solutions Includes maps edited by the Water Information Network System of the International Hydrological Program IHP WINS Provides a compilation of information regarding the occurrence and distribution of pharmaceuticals in the marine environment which will help establish new and more efficient monitoring programs and new research lines Depicts the most important results of environmental risk assessments that can be used as a first step for further toxicological studies

Carbon sequestration by coastal floral community Abhijit Mitra, 2014-01-01 As nature based approaches for the mitigation of climate change are increasingly seen as part of the solution blue carbon has recently been receiving greater international attention This has stimulated renewed interest in better management conservation and restoration of coastal ecosystems including mangrove forests seagrass meadows tidal salt marshes and

seaweed beds for the purpose of climate change mitigation. However, a number of gaps still exist in our scientific knowledge on coastal biodiversity which are critical to developing blue carbon projects for the international carbon market. The present book has focused on some of these important issues. Apart from standardizing ecological approach in estimating blue carbon in various vegetation compartments, the book also presents few important case studies as annexure which can serve as the basics of hand on scientific training in estimating the magnitude of stored carbon in mangroves, salt marsh, seagrass, seaweeds and phytoplankton. The influence of salinity, nutrients and several relevant hydrological parameters on the rate of blue carbon sequestration has also been critically analysed.

Oceanography and Marine Biology R.N. Hughes, D. J. Hughes, I. P. Smith, A.C. Dale, 2016-11-25. Ever increasing interest in oceanography and marine biology and their relevance to global environmental issues create a demand for authoritative reviews summarizing the results of recent research. Oceanography and Marine Biology: An Annual Review has catered to this demand since its founding by the late Harold Barnes more than 50 years ago. Its objectives are to consider annually the basic areas of marine research, returning to them when appropriate in future volumes to deal with subjects of special and topical importance and to add new subjects as they arise. The favourable reception and complimentary reviews accorded to all the volumes shows that the series is fulfilling a very real need. Volume 54 follows closely the objectives and style of the earlier volumes, continuing to regard the marine sciences with all their various aspects as a unity. Physical, chemical and biological aspects of marine science are dealt with by experts actively engaged in these fields. The series is an essential reference text for researchers and students in all fields of marine science and related subjects and it finds a place in libraries of universities, marine laboratories, research institutes and government departments. It is consistently among the highest ranking series in terms of impact factor in the marine biology category of the citation indices compiled by the Institute for Scientific Information Web of Science.

Muddy Coasts of the World Terry R. Healy, Ying Wang, Judy-Ann Healy, 2002. The SCOR Scientific Committee on Ocean Research of ICSU Working Group 106 was tasked with reviewing the geomorphic, sedimentary and oceanographic dynamics of muddy coasts, assessing the impact of sea level rise on muddy coasts, especially in estuaries, and to recommend future research pathways relating to muddy coasts. This book addresses these questions and includes chapters on the research issues of muddy coasts: the definition of muddy coasts, sea level rise effects on muddy coasts, fundamental dynamic processes effecting muddy coast formation, the role of mangrove and salt marsh vegetation, bio geochemistry of muddy coast deposits, storm surge effects on muddy coasts, human impacts on muddy coasts and a detailed geographical review of muddy coasts of the world. The volume presents examples of muddy coasts sedimentation from many different environments of the world, including the broad expanse muddy coast of China, muddy coasts of continental trailing edges, the Americas, muddy coasts in seasonally ice covered environments, muddy coasts in areas of tropical coral reefs, muddy coasts from the tropics, muddy coasts resulting from large river discharges and muddy coasts of mid latitude oceanic islands.
