Silver, 2006-05-30 Biotechnology is the oldest and most widespread of inventions providing sustenance for humankind since the beginning of civilization Until recently however its tools were crude and its implementation was opaque Today new understanding in the life sciences brings both precision and transparency to the process Modern inventions could alleviate human suffering feed the world and at the same time stem the tide of earth's ecological degradation Yet ironically biotechnology becomes evermore contentious On the left New Age secularists rail against genetically modified crops On the right religious Americans want embryo stem cell research to be a felony While they share seemingly little beyond mutual contempt Silver argues that both political camps are driven consciously or subconsciously by a fundamental fear of violating a higher spiritual authority imagined either as the creator God of the Bible who rules from above or a vague Mother Nature goddess here on earth In *Challenging Nature* Silver offers a provocative look at the collision of science religion pseudoscience and politics A hands on scientist who has actually manipulated genes he leaves the laboratory traveling the globe in what he calls one scientist's journey from a cloistered community in which life is assumed to be combinations of complex molecules and information flow between them to a world of humanity dominated by soul and spirits and to the intense chaos of Mother Nature at large The result is a fascinating book that could provide a wake up call for the West where the economic ramifications of pseudoscience may be enormous a future in which Asia becomes dominant in biotechnological advances
