Geothermics In Basin Analysis:

Geothermics in Basin Analysis Andrea Förster, Daniel F. Merriam, 2012-12-06 Geothermics in Basin Analysis focuses on the study of sedimentary basins stressing essential parts of problems in which geothermics is involved Subject matter includes the measuring of temperature logs and capturing of industrial temperature data and their interpretation to delineate subsurface conditions and processes the importance of porosity and pore filling for modeling thermal fields the thermal insulation of shales geothermal anomalies associated with mud diapirs and basin hydrodynamic regimes temperatures related to magmatic underplating and plate tectonics

Basin Analysis, Global Sedimentary Geology and Sedimentology Baojun Liu, Li Sitian, 1997-05 The 30th International Geological Congress was held in Beijing China in August 1997 Leading scientists convened to present their findings and views to the international geological research community Volume 8 of 26 focuses on basin analysis global sedimentary geology and sedimentology All articles in the proceedings have been refereed and keynote papers have been included in Volume 1 These proceedings aim to present a view of contemporary geology and should be of interest to researchers in the geological sciences

Basin Analysis Philip A. Allen, John R. Allen, 2013-05-30 Basin Analysis is an advanced undergraduate and postgraduate text aimed at understanding sedimentary basins as geodynamic entities The rationale of the book is that knowledge of the basic principles of the thermo mechanical behaviour of the lithosphere the dynamics of the mantle and the functioning of sediment routing systems provides a sound background for studying sedimentary basins and is a pre requisite for the exploitation of resources contained in their sedimentary rocks The third edition incorporates new developments in the burgeoning field of basin analysis while retaining the successful structure and overall philosophy of the first two editions The text is divided into 4 parts that establish the geodynamical environment for sedimentary basins and the physical state of the lithosphere followed by a coverage of the mechanics of basin formation an integrated analysis of the controls on the basin fill and its burial and thermal history and concludes with an application of basin analysis principles in petroleum play assessment including a discussion of unconventional hydrocarbon plays The text is richly supplemented by Appendices providing mathematical derivations of a wide range of processes affecting the formation of basins and their sedimentary fills Many of these Appendices include practical exercises that give the reader hands on experience of quantitative solutions to important basin analysis processes Now in full colour and a larger format this third edition is a comprehensive update and expansion of the previous editions and represents a rigorous yet accessible guide to problem solving in this most integrative of geoscientific disciplines Additional resources for this book can be found at www.wiley.com/go/allen/basinanalysis

Computerized Basin Analysis Jan Harff, Daniel F. Merriam, 2012-12-06 This symposium on Computerized Basin Analysis for Prognosis of Energy and Mineral Resources was organized by Dr Jan Harff chairman of the Scientific Committee for the meeting in Giistrow in what was then East Germany Sponsors of this meeting were the International Union of Geological Sciences Commission on Storage

Automatic Processing and Retrieval of Geologic Data COGEO DATA Academy of Sciences of the German Democratic Republic GDR National Oil and Gas Trust of the GDR and the International Association for Mathematical Geology IAMG Main topics of the symposium held from 19-22 June 1990 were application of computer methods to the exploration and exploitation of oil and gas coal and other energy and mineral resources There were computer demonstrations as well as a one day field trip to the geothermic heating plant in Waren The Regional Group for Eastern Europe of COGEO DATA also met during the conference Fifty one papers were presented including eight poster sessions by authors from 14 countries As was to be expected there was a large percentage of papers from the East Bloc of European countries especially the GDR USSR and the CSSR with a fair representation from the FRG and USA and a smattering from the nine others Most of the papers were application oriented and related to the mineral industries There was ample time for exchange of ideas and dissemination of material

Geologic Modeling and Simulation Daniel F. Merriam, John C. Davis, 2012-12-06 Modeling and simulation were introduced to the earth sciences about four decades ago Modeling has proven its worth and now it is an accepted procedure for analyzing and solving geological problems The papers in this collection are focused on modeling sediment deposition and sedimentary sequences and have a decidedly practical flavor Some of the leading simulation packages such as CORRELATOR SEDFLUX SEDpak SEDSIM STRATA and STRATSIM are applied to problems in hydrocarbon exploration oil production groundwater development coal bed appraisal geothermics and environmental diagnosis All of these subjects fall under the broad heading of sedimentary basin analysis The fifteen papers in this volume are written by internationally recognized experts from academia and industry The contributions represent the status of geologic modeling and simulation at the start of the 21st century and will give the reader an insight into current research problems and their possible solutions

Applied Geothermics Lev Eppelbaum, Izzy Kutasov, Arkady Pilchin, 2014-04-29 This book describes origin and characteristics of the Earth's thermal field thermal flow propagation and some thermal phenomena in the Earth Description of thermal properties of rocks and methods of thermal field measurements in boreholes

Integrated Fault Seal Analysis S. Ogilvie,S. Dee,R.W. Wilson,W. Bailey,2020-08-03 Faults commonly trap fluids such as hydrocarbons and water and therefore are of economic significance During hydrocarbon field development smaller faults can provide baffles and or conduits to flow There are relatively simple well established workflows to carry out a fault seal analysis for siliciclastic rocks based primarily on clay content There are however outstanding challenges related to other rock types to calibrating fault seal models with static and dynamic data and to handling uncertainty The variety of studies presented here demonstrate the types of data required and workflows followed in today s environment in order to understand the uncertainties risks and upsides associated with fault related fluid flow These studies span all parts of the hydrocarbon value chain from exploration to production but are also of relevance for other industries such as radioactive waste and CO2 containment
