Germ Cell Development Division Disruption And Death:

Germ Cell Development, Division, Disruption and Death Barry R. Zirkin, 2012-12-06 An exploration of germ cell development division disruption and death designed for reproductive endocrinologists microbiologists and physiologists Topics covered include cloning and characterization of genes expressed in germ cell lines spermatological transplantation and testicular ageing

Male Reproductive Function Christina Wang, 2007-05-28 Male Reproductive Function gives an up to date review on the physiology and disease processes associated with the male reproductive system The first few chapters describe the regulation of the functions of the testis and the integration of its components germ cells Sertoli cells and Leydig cells This is followed by a description of puberty and aging and the disorders or dysfunction that may be associated with these physiological processes Discussions on the current methods for the diagnosis and treatment of male hypogonadism male infertility and male sexual dysfunction follow with detailed descriptions of types of androgen replacement and the benefits and risks of such treatment The book concludes with the development of male contraception and the possible influence of the environment on the male reproductive system Male Reproductive Function represents a conglomeration of the efforts of experts in andrology from all over the world both in basic cellular molecular biology as well as in clinical science and practice This book is suitable for endocrinologists urologists general internists gynecologists and other students in the field of male reproduction

Male Sterility and Motility Disorders Samir Hamamah, Roger Mieuisset, Francois Olivennes, Rene Frydman, 2012-12-06 This conference dedicated to the etiology and treatment of motility disorders in spermatozoa and male sterility attracted some of the finest investigators in the field Standards were immensely high throughout and discussions were meaningful and detailed Analyses on disorders in sperm motility demand a broad based approach involving cytologists geneticists andrologists and embryologists because the topic has many clinical and scientific overtones Human spermatozoa are at the mercy of so many factors as they form and mature in the testis and epididymis Their survival and fundamental characteristics are essential for fertilization and the male genome imposes its influence on the embryo as it becomes active in male pronuclei very soon after sperm entry into the oocyte All of these fundamental aspects of sperm biology demanded a broad breadth of topics in the symposium The opening session quickly got down to fundamentals with contributions from J L Gatti J G Alvarez C Gagnon and H Breitbart They discussed the mechanism and regulation of motility the metabolic strategy of human spermatozoa the effects of exogenous factors such as antibodies infections and toxins and finally the role of intracellular calcium on sperm motility To these topics the postcoffee session on the first morning described the genetics of motility disorders and the etiology and management of necrozoospermia The excellent presentation provided the background detail of the symposium and opened the way for the discussion of various clinical aspects of the topic

Testicular Tangrams F.F.G. Rommerts, K.J. Teerds, 2013-06-29 During the past two decades research on the testis has created a vast number of publications New techniques such as cell and gene cloning germ cell

manipulation and transplantation as well as gene expression have surpassed the classical approaches that involved studies on receptor activation and endocrine paracrine and autocrine regulatory mechanisms. Due to the expansion of this field of research it has become increasingly difficult to integrate the large number of observations and relate them to the physiology and pathophysiology of the testis. More emphasis must therefore be put on the integration of isolated findings and the construction of the total picture. In order to stimulate this specific mental activity we have named this book Testicular Tangram. We hope that the chapters in this book will be used as pieces of the testicular puzzle and that the reader enjoys composing new shapes. The chapters of this book are representative of the plenary lectures presented at the 11th European Workshop on Molecular and Cellular Endocrinology of the Testis held in Doorwerth, The Netherlands from April 6-10, 2002. Publication of this book has been made possible by the generous support of the Ernst Schering Research Foundation. We would also like to thank the distinguished scientists who have provided us with their excellent manuscripts well before the start of the Workshop. We acknowledge the help of Dr. U. F. Habenicht, Dr. M.

Sex-Steroid Interactions with Growth Hormone Johannes D. Veldhuis, Andrea Giustina, 2012-12-06 Sex Steroid Interactions with Growth Hormone presents the proceedings of an international symposium held from October 22-25 in Naples, Florida. The proceedings provide new insights and concepts gained by molecular, cellular, and neuroendocrine research into mechanistic interactions of the reproductive and somatotrophic axes. Chapters include discussions of the impact of sex steroids on growth hormone secretion in both children and adults; sex steroids, growth hormone releasing factor, and somatostatin; how sex steroids modulate growth hormone action on target tissues; and differential effects of growth hormone secretagogues in men and women. This volume is designed for physicians, scientists, and other health professionals interested or trained in clinical and basic endocrinology, growth, or reproduction.

Male Fertility and Infertility T. D. Glover, C. L. R. Barratt, 2009-03-19 This contemporary account of male fertility provides a much needed bridge between those seeking to understand the subject from an evolutionary and biological perspective and those with clinical responsibility for the investigation and treatment of infertility. Accordingly, the first half of the book deals with the evolutionary aspects of male reproduction and sperm competition, sperm production and delivery in man and other animals, spermatogenesis, and epididymal function, sperm transport in the female tract, and the apparent decline in human sperm count. The second part of the book puts greater emphasis on clinical problems and opens with a discussion of intracytoplasmic sperm injection, its value and limitations. This is followed by a review of modern developments in the genetics of male fertility and proceeds to a further chapter on the role of surgical procedures used in the treatment. Semen analysis is critically reviewed and the molecular techniques now being used in preimplantation diagnosis and in the study of mitochondrial inheritance are fully described. Taken together, these chapters, written by an international team of authors, illustrate the breadth of vision needed to tackle the problem of male fertility.
