Genetic Origins Of Tumor Cells:

Genetic Origins of Tumor Cells F.J. Cleton, J.W.I.M. Simons, 2012-12-06 In 1978 the Dutch Genetic Society organized a symposium on the genetic aspects of the origin of tumor cells. The objective of this symposium was to reach an overview of the state of knowledge in a number of quite different fields related to each other through the genetics of the initiation of tumor cells. This monograph contains the brought up to date contributions of this symposium. Herein discussed is the extent that characteristics of tumor cells can be considered as a phenotype. The possible role of somatic mutation and repair of genetic damage is studied and the analysis of genes with oncogenic potential is pursued. Also the influence of host factors in the response to oncogenic action is dealt with. This volume describes in a clear and concise manner the current status in these research areas and it is hoped will stimulate the exchange of information and ideas between them. The Molecular Biology of Cancer Harris Busch, 2013-10-22 The Molecular Biology of Cancer discusses the state of progress in the molecular biology of cancer. The book describes the effects of anticancer agents on nucleolar ultrastructure, the role of chromosomes in the causation and progression of cancer and leukemia, the replication modification and repair of DNA. The text also describes the metabolism and utilization of messenger RNA and other high molecular weight RNA and low molecular weight nuclear RNA, the characteristics, structures and functions of nuclear proteins and the process of protein synthesis. Nucleotides are reviewed with regard to its biosynthesis, inhibition of synthesis and development of resistance to inhibitors. The book further tackles the biochemical mechanisms of chemical carcinogenesis, the oncogenic viruses and the molecular correlation concept. The text also demonstrates phenotypic variability as a manifestation of translational control and plasmacytomas. Molecular biologists, virologists, pathologists, cell biologists, oncologists, pharmacologists and students taking related courses will find the book useful. **Encyclopedia of Cancer**, 2018-10-12 Encyclopedia of Cancer Third Edition Three Volume Set provides a comprehensive up to date overview of the multiple facets of the disease including research, treatment and societal impact. Evolution by Tumor Neofunctionalization Andrei P. Kozlov, 2014-02-15 Evolution by Tumor Neofunctionalization explores the possibility of the positive role of tumors in evolution of multicellular organisms This unique perspective goes beyond recent publications on how evolution may influence tumors to consider the possible role of tumors in evolution Widespread in nature tumors represent a much broader category than malignant tumors only The majority of tumors in humans and other animals may never undergo malignant transformation Tumors may differentiate with the loss of malignancy and malignant tumors may spontaneously regress Cellular oncogenes and tumor suppressor genes play roles in normal development Many features of tumors could be used in evolution and there are examples of tumors that have played a role in evolution This book will stimulate thinking on this topic by specialists in the fields of evolutionary biology oncology molecular biology molecular evolution embryology evo devo tumor immunology pathology and clinical oncology Covers the role that tumors might play in evolution Provides multidisciplinary approach that will appeal to a wide circle of professionals in the fields of evolutionary biology oncology molecular biology and more

RNA/DNA and Cancer Joseph G. Sinkovics, 2016-04-01 In this book the author Joseph G Sinkovics liberally shares his views on the cancer cell which he has been observing in vivo and in vitro over a life time Readers will learn how as an inherent faculty of the RNA DNA complex the primordial cell survival pathways are endogenously reactivated in an amplified or constitutive manner in the multicellular host and are either masquerading as self elements or as placentas to which the multicellular host is evolutionarily trained to extend full support The host obliges The author explains that there is no such evidence that malignantly transformed human cells survive in nature However when cared for in the laboratory these cells live and replicate as immortalized cultures These cells retain their vitality upon storage in liquid nitrogen One can only imagine an astrophysical environment in which such cells could survive perhaps first their seemingly humble exosomes would populate that environment Immortal cell populations so created may survive as individuals or may even re organize themselves into multicellular colonies as representatives of life for the duration of the Universe This thought provoking book is the work of a disciplined investigator and clinician with an impeccable reputation and he enters a territory that very few if any before him have approached from the same angles It will appeal to researchers with an interest in cell survival pathways and those researching cancer cells
