

MAIN DIFFERENCES BETWEEN SIMULATED ANNEALING AND GENETIC ALGORITHMS

SEARCH SPACE

Simulated Annealing works well in continuous search spaces, where a range of values represents the solutions and many potential solutions. On the other hand, Genetic Algorithm is better suited for discrete search spaces, where a finite set of values represents the solutions, and there are fewer potential solutions.

EXPLORATION VS. EXPLOITATION

Simulated Annealing emphasizes exploration by randomly generating new solutions and exploring as much of the search space as possible. On the other hand, Genetic Algorithm emphasizes exploitation by selecting the best solutions and generating new solutions based on them.

CONVERGENCE RATE

Simulated Annealing converges more slowly but can avoid getting stuck in local optima. It does this by gradually reducing the temperature, which controls the probability of accepting new solutions. On the other hand, Genetic Algorithm converges faster but can get stuck in local optima.

SOLUTION QUALITY

Simulated Annealing can find the global optimum with a high probability. In contrast, Genetic algorithms can find good but only sometimes optimal solutions.

Genetic Algorithms And Simulated Annealing:

GENETIC ALGORITHMS AND SIMULATED ANNEALING Lawrence Davis,1987 **Parallel Genetic Algorithms and Simulated Annealing** Hao Chen,1996 Intelligent Optimisation Techniques Duc Pham,D. Karaboga,2012-12-06 This book covers four optimisation techniques loosely classified as intelligent genetic algorithms tabu search simulated annealing and neural networks Genetic algorithms GAs locate optima using processes similar to those in natural selection and genetics Tabu search is a heuristic procedure that employs dynamically generated constraints or tabus to guide the search for optimum solutions Simulated annealing finds optima in a way analogous to the reaching of minimum energy configurations in metal annealing Neural networks are computational models of the brain Certain types of neural networks can be used for optimisation by exploiting their inherent ability to evolve in the direction of the negative gradient of an energy function and to reach a stable minimum of that function Aimed at engineers the book gives a concise introduction to the four techniques and presents a range of applications drawn from electrical electronic manufacturing mechanical and systems engineering The book contains listings of C programs implementing the main techniques described to assist readers wishing to experiment with them The book does not assume a previous background in intelligent optimisation techniques For readers unfamiliar with those techniques Chapter 1 outlines the key concepts underpinning them To provide a common framework for comparing the different techniques the chapter describes their performances on simple benchmark numerical and combinatorial problems More complex engineering applications are covered in the remaining four chapters of the book A Comparison of Simulated Annealing and Genetic Algorithms for the Genome Mapping Problems John A. Gunnels,1993 The data used for the construction of genome maps is imperfect therefore the mapping of a physically linear structure must take place in a very uneven feature space As the number of genes to be ordered grows it appears to be impractical to use exhaustive search techniques to find the optimal mapping In this paper we compare genetic algorithms and simulated annealing two methods that are widely believed to be well suited to non smooth feature spaces and find that the genetic algorithm approach yields superior results Here we present performance profiles of comparable implementations of both genetic algorithms and simulated annealing We have translated the problem to a form comparable to the shortest path problem and found that the ability of a genetic algorithm to combine different partial solutions seems to be responsible for its superiority over the simulated annealing method This is because in the genome mapping problem as in the Traveling Salesman Problem good solutions tend to be rather sparse and because optimal subtours tend to be components of nearly optimal tours **A Comparison Between Genetic Algorithms and Simulated Annealing in Solving the Traveling Salesman Problem** Mark Prior,John I. McCool,1998 *An Adaptive Hybrid Genetic Algorithm - Simulated Annealing Approach* Manar Hosny,2010-04 Genetic algorithms GAs and simulated annealing SA are important search methods Combining both may improve the search quality for example by using SA as a genetic operator One problem in such

technique is to find annealing parameters that work for all stages of the run In this research we introduce a new adaptive hybrid GA SA algorithm in which SA acts as a mutation However the SA will be adaptive in the sense that its parameters are evolved during the search Adaptation should help guide the search towards optimum solutions with minimum parameter tuning The algorithm is tested on solving an important NP hard problem the MAP Maximum a Posteriori Assignment Problem on BBNs Bayesian Belief Networks The results obtained indicate that the adaptive hybrid algorithm provides an improvement of solution quality over that obtained by GA used alone and GA augmented with standard non adaptive SA Its effect however is more profound for large problems which are difficult for GA alone to solve The techniques reported in this book should be of interest to researchers in heuristics and meta heuristics and their application to combinatorial optimization problems

Image Registration with Simulated Annealing and Genetic Algorithms ,2006 **Simulated Annealing** Marcos Sales Guerra Tsuzuki,2012-10-17 This book presents state of the art contributes to Simulated Annealing SA that is a well known probabilistic meta heuristic It is used to solve discrete and continuous optimization problems The significant advantage of SA over other solution methods has made it a practical solution method for solving complex optimization problems Book is consisted of 13 chapters classified in single and multiple objectives applications and it provides the reader with the knowledge of SA and several applications We encourage readers to explore SA in their work mainly because it is simple and can determine extremely very good results **Simulated Annealing, Weighted Simulated Annealing and Genetic Algorithm at Work** Francois Bergeret,Philippe Besse,1998 Two well known stochastic optimization algorithms simulated annealing and genetic algorithm are compared when using a sample to minimize an objective function which is the expectation of a random variable Since they lead to minimum depending on the sample a weighted version of simulated annealing is proposed in order to reduce this kind of over fit bias The algorithms are implemented on an optimization problem related to quality control A design of experiment is used to get the best trade off between optimization and execution time Simulated annealing appears to be more efficient than the genetic algorithm With regard to the bias problem the randomly weighted version of simulated annealing allows to achieve a solution less dependent on the sample and thus less biased *Multiple Objective Step Function Maximization with Genetic Algorithms and Simulated Annealing* Guenther Grohall,Juergen Jung,2003 *Robotic Systems: Concepts, Methodologies, Tools, and Applications* Management Association, Information Resources,2020-01-03 Through expanded intelligence the use of robotics has fundamentally transformed a variety of fields including manufacturing aerospace medicine social services and agriculture Continued research on robotic design is critical to solving various dynamic obstacles individuals enterprises and humanity at large face on a daily basis *Robotic Systems Concepts Methodologies Tools and Applications* is a vital reference source that delves into the current issues methodologies and trends relating to advanced robotic technology in the modern world Highlighting a range of topics such as mechatronics cybernetics and human computer interaction this multi volume book is ideally designed for robotics
