Genetic Engineering And In Vitro Culture Of Crop Legumes:

Genetic Engineering and In Vitro Culture of Crop Legumes Paul Christou,1992-10-20 An introductory chapter provides an up to date review of biotechnology and genetic engineering for crop legumes strategy techniques and goals Following chapters examine each of major category economic and nutritional importance applicable genetic engineering techniques and feasible objectives for improvement Special attention is given to soybeans the most important of the legumes The text is well illustrated and carefully organized for easy reference [Applied Genetics of Leguminosae Biotechnology](#)

Pawan K. Jaiwal,Rana P. Singh,2013-06-29 Legumes include many very important crop plants that contribute very critical protein to the diets of both humans and animals around the world Their unique ability to fix atmospheric nitrogen in association with Rhizobia enriches soil fertility and establishes the importance of their niche in agriculture Divided into two volumes this work presents an up to date analysis of in vitro and recombinant DNA technologies for the improvement of grain forage and tree legumes Volume 10B presents the current state and future prospects of in vitro regeneration and genetic transformation expression and stability of transgenes modification of traits in almost all the important legumes for example soybean peanut pea french bean chick pea pigeon pea cowpea mung bean black gram azuki bean lentil Lathyrus lupinus Lotus spp Medicago spp Trifolium spp Winged bean Guar and tree legumes for their improvement *Handbook of New Technologies for Genetic Improvement of Legumes* P. B. Kirti,2008-05-13 A comprehensive and groundbreaking collection of ideas for plant improvement Most of the world s supply of legumes is cultivated under adverse conditions that make this commercially important crop susceptible to the vagaries of nature and damaging stresses Genetic manipulation has become a proven way for cultivators to battle these pro **History of Soybean Variety Development, Breeding and Genetic Engineering (1902-2020)** William Shurtleff; Akiko Aoyagi,2020-06-25 The world s most comprehensive well documented and well illustrated book on this subject With extensive subject and geographic index 152 photographs and illustrations mostly color Free of charge in digital format on Google Books *Advances in Cowpea Research* B. L. Hedley,2001 The compounds making up the dry weight of seeds play a major role in determining the nutritional quality and ultimately the uses of the economic value of the seed The carbohydrate fraction can be divided into starch fibre and soluble carbohydrates This book covers the chemistry nutritional value physiology processing and breeding biotechnology of carbohydrates in grain legume seeds There is currently no book available which covers the strategies for improving carbohydrates in grain legumes which takes into account both nutritional

and agricultural requirements This books fills that gap Challenges and opportunities for enhancing sustainable cowpea production: proceedings of the World Cowpea Conference III held at IITA, 4-8 September 2000 , **Plant Protoplasts and Genetic Engineering I** Y. P. S. Bajaj, 2012-12-06 Isolated protoplasts are a unique tool for genetic manipulation of plants Since the discovery of a method for the enzymatic isolation of pro toplasts by Professor E C Cocking in 1960 tremendous progress has been made in this very fascinating area of research I have witnessed the struggle in the 1960 s and early 1970 s when obtaining a clean prepara tion of protoplasts was considered an achievement I also shared the pioneering excitement and enthusiasm in this field during the 2nd Inter national Congress of Plant Tissue Culture held at Strasbourg in 1970 where Dr I Thkebe of Japan presented his work on the induction of division in tobacco protoplasts This was followed by my participation in three international conferences devoted to plant protoplasts held in 1972 in Salamanca Spain and Versailles France and then in 1975 in Nottingham England The enthusiasm shown by plant scientists at these meetings was ample proof of the bright future of protoplast technology and it became evident that protoplasts would play a major role in plant biotechnology especially in genetic engineering Since then we have never looked back and now the methods for isolation fusion and culture as well as regeneration of somatic hybrids have become routine laboratory procedures for most plant species Currently the focus is on cereal and tree protoplasts In order to bring about any genetic manipulation through fusion in corporation of DNA and transformation the regeneration of the entire plant through manipulation of protoplasts is a prerequisite **Somatic Hybridization in Crop Improvement I** Y. P. S. Bajaj, 2012-12-06 Thirty five chapters on various aspects of fusion of plant protoplasts and somatic hybridization deal with the regeneration of interspecific and intergeneric somatic hybrids and cybrids in various plants cereals grasses legumes potato tomato eggplant lettuce Brassica Datura Hyoscyamus Nicotiana Catharanthus Rauwolfia Citrus Poncirus Prunus Pyrus Populus algae bryophytes and ferns The implications of somatic hybridization in gene transfer in wide crosses and for the induction of genetic variability in various crops are discussed The book is an invaluable source of information for advanced students teachers and research scientists in the field of plant breeding genetic engineering plant tissue culture and general plant biotechnology Advances in Plant Breeding Strategies: Legumes Jameel M. Al-Khayri, Shri Mohan Jain, Dennis V. Johnson, 2019-10-08 This book examines the development of innovative modern methodologies towards augmenting conventional plant breeding in individual crops for the production of new crop varieties under the increasingly limiting environmental and cultivation factors to achieve sustainable agricultural production enhanced food security in addition to providing raw materials for innovative industrial products and pharmaceuticals This is Vol 7 subtitled Legumes focuses on advances in breeding strategies using both traditional and modern approaches for the improvement of individual legume crops Included in this volume are Adzuki bean Black gram Chickpea Cluster bean Common bean Cowpea Faba bean Hyacinth bean Lentil Mung bean Pigeonpea and Soybean This volume is contributed by 57 internationally reputable scientists from 9 countries Each chapter comprehensively

reviews the modern literature on the subject and reflects the authors own experience

Improvement Strategies of Leguminosae Biotechnology Pawan K. Jaiwal, Rana P. Singh, 2013-03-09 Legumes include many very important crop plants that contribute critical protein to the diets of many around the world Many important forages and green manure crops are legumes Legumes are also large contributors to the vegetable oil and animal feed protein sectors One characteristic of legumes that could become even more important as world energy sources decline and nitrogen fertilizer prices increase is nitrogen fixation something few other plants can do Thus legumes have a unique and important niche in agriculture While some of the small seeded forage legumes have been relatively easy to work with in tissue culture as far as culture initiation plant regeneration and transformation are concerned most large seeded legumes like soybean have been recalcitrant Today however many laboratories are inserting genes into soybean and producing unique plants for both commercial and scientific uses These advancements have taken a large amount of research effort and still require time and labour
