Genetic Evaluation for Insect Resistance in Rice E. A. Heinrichs, 1985 Techniques for Evaluating Insect Resistance in Crop Plants Charles M. Smith, Z. R. Khan, Mano Dutta Pathak, 1993-12-17 This comprehensive book is the first illustrated volume to provide detailed discussions of all plant genera regarding techniques developed to evaluate plant resistance to insects Many of the book's references have never before appeared in a volume on this subject The authors systematically discuss techniques used to evaluate different types of insect behavior and plant morphological and phytochemical factors responsible for plant resistance and susceptibility to insects

Global Plant Genetic Resources for Insect-Resistant Crops Stephen L. Clement, 2019-04-23 An excellent reference book for plant breeders and entomologists Global Plant Genetic Resources for Insect Resistant Crops combines germplasm preservation with use in insect resistant crop development and basic research The contributions of the authors represent the efforts cooperation and understanding of world leaders in the conservation and use of global plant genetic resources for sustainable agricultural production Concepts addressed include dependency of modern agriculture on chemical pest control and applications of biotechnology in use of natural plant genes for insect resistant crops Marketing Class Code 1E 1G 9C

Breeding Insect Resistant Crops for Sustainable Agriculture Ramesh Arora, Surinder Sandhu, 2017-10-16 This book reviews and synthesizes the recent advances in exploiting host plant resistance to insects highlighting the role of molecular techniques in breeding insect resistant crops It also provides an overview of the fascinating field of insect plant relationships which is fundamental to the study of host plant resistance to insects Further it discusses the conventional and molecular techniques utilized useful in breeding for resistance to insect pests including back cross breeding modified population improvement methods for insect resistance marker assisted backcrossing to expedite the breeding process identification and validation of new insect resistance genes and their potential for utilization genomics metabolomics transgenesis and RNAi Lastly it analyzes the successes limitations and prospects for the development of insect resistant cultivars of rice maize sorghum and millet cotton rapeseed legumes and fruit crops and highlights strategies for management of insect biotypes that limit the success and durability of insect resistant cultivators in the field Arthropod pests act as major constraints in the agro ecosystem It has been estimated that arthropod pests may be destroying around one fifth of the global agricultural production potential production every year Further the losses are considerably higher in the developing tropics of Asia and Africa which are already battling severe food shortage Integrated pest management IPM has emerged as the dominant

paradigm for minimizing damage by the insects and non insect pests over the last 50 years Pest resistant cultivars represent one of the most environmentally benign economically viable and ecologically sustainable options for utilization in IPM programs Hundreds of insect resistant cultivars of rice wheat maize sorghum cotton sugarcane and other crops have been developed worldwide and are extensively grown for increasing and or stabilizing crop productivity The annual economic value of arthropod resistance genes developed in global agriculture has been estimated to be greater than US 2 billion Despite the impressive achievements and even greater potential in minimizing pest related losses only a handful of books have been published on the topic of host plant resistance to insects This book fills this wide gap in the literature on breeding insect resistant crops It is aimed at plant breeders entomologists plant biotechnologists and IPM experts as well as those working on sustainable agriculture and food security

Integrated management of insect pests: Current and future developments Emeritus Prof. Marcos Kogan, Emeritus Prof. E. A. Heinrichs, 2019-10-29 Particular focus on advances in understanding insect species and landscape ecology which provide the foundations for effective IPM Covers latest research on classical conservation and augmentative biological control Reviews key developments in use of entomopathogenic fungi viruses and nematodes

Instant Insights: Integrated pest management in cereal cultivation F. G. Horgan, Abie Horrocks, Melanie Davidson, Paul Horne, Jessica Page, Bonnie Pendleton, Emeritus Prof. E. A. Heinrichs, Dr John E. Foster, 2022-12-20 This collection features four peer reviewed reviews on integrated pest management IPM in cereal cultivation The first chapter describes a holistic approach to IPM using knowledge of the natural regulation of herbivore and weed populations and of natural succession in agricultural wetlands It also highlights the need for an improved understanding of rice ecosystems in a holistic manner to ensure the economic and environmental sustainability of rice production The second chapter provides a brief overview of IPM and reviews the range of control methods available to growers including biological cultural and chemical The chapter considers the implementation of IPM programmes in wheat production and utilises a case study from New Zealand to demonstrate a successful example of it The third chapter discusses key insect pests of sorghum their life cycles and their impact on crop productivity and performance The chapter reviews the use of IPM programmes as a sustainable alternative to controlling pest infestations without the need for insecticides The final chapter examines host plant resistance as an ecological approach to managing crop pests and considers the process of evaluating resistance on the basis of insect behavior The chapter also looks at breeding rice for resistance to insect pests and considers the constraints on the development and deployment of insect resistant plant technology
