Apple,2012-12-06 It is indeed a pleasure to write a foreword for this spectacular book which represents a landmark in the history of ocular pathology Not since the three volumes of the Henke Lubarsch handbook appeared forty years ago has anything like this come on the market This book represents a comprehensive thorough and up to date clinically oriented textbook on ocular pathology We are all indebted to the senior author who is now professor of ophthalmology at the University of Erlangen who presents us here with the fruit of decades of industrious endeavors We also have to be grateful to the American ophthalmic pathologist Dr David Apple who as one of the main collaborators of the German edition has now provided us with the English translation The book has a twofold purpose First it is meant to be a source of instruction for ophthalmologists and pathologists For that purpose it is beautifully illustrated both by clinical pictures and by excellent photomicrographs and electromicroscopic pictures Most valuable from a didactic point of view are the colored schematic drawings and the many tables These two features are practically unique and should help any neophyte in grasping the principles of ocular pathology *American Journal of Medical Genetics* ,1982

Heredity and Visual Development Joel B. Sheffield, S. Robert Hilfer, 2012-12-06 The eye has fascinated scientists from the earliest days of biological investigation The diversity of its parts and the precision of their interaction make it a favorite model system for a variety of developmental studies The eye is a particularly valuable experimental system not only because its tissues provide examples of fundamental processes but also because it is a prominent and easily accessible structure at very early embryonic ages In order to provide an open forum for investigators working on all aspects of ocular development a series of symposia on ocular and visual development was initiated in 1973 A major objective of the symposia has been to foster communication between the basic research worker and the clinician It is our feeling that much can be learned on both sides from community this interaction The idea for an informal meeting allowing maximum exchange of ideas originated with Dr Leon Candeub who supplied the necessary driving force that made the series a reality Each symposium has on a different aspect of ocular development Speakers have concentrated been selected to approach related topics from different perspectives
