## **Genetic Factors In Coronary Heart Disease:**

**Genetic factors in coronary heart disease** U. Goldbourt, U. de Faire, K. Berg, 2012-12-06 Incidence and mortality of atherosclerosis and coronary heart disease CHD vary considerably among races populations and ethnic groups Some individuals with low levels of risk factors succumb early to disease while many others with a high risk profile do not CHD clusters in families and is manyfold increased in first degree relatives of persons with an early onset of the disease Such studies provide compelling evidence of the high degree of heritability of CHD and its risk factors This book consolidates the available evidence for the roles of genetics in atherosclerosis its correlates and its sequelae It presents and discusses the methodology currently used to elucidate the role of genetics Separate parts focus on evidence of familial aggregation and ethnic variability of the disease and on monogenic and polygenic inheritance modes including all the recent findings and innovation The book also contains chapters on the genetic aspects of vessel wall processes such as early structural findings in histological studies and the variability of coronary anatomic patterns Polymorphisms at the DNA level RFLP are detailed and reviewed Directions for future research in the exciting and fast developing realm of genetic epidemiology are outlined and the major preventive and public health implications are discussed Genetic Factors in Coronary Heart Disease provides a systematic review of findings integrated to offer a comprehensive summary and stepping stone for future research It will be of interest to investigators in atherosclerosis genetics epidemiology biostatistics cardiology and public health Genetic Risk Factors of Coronary Heart Disease Justine Amanda Ellis, 1999

**Genetic Approaches to Coronary Heart Disease and Hypertension** Kare Berg, Victor Bulzhenkov, Pierre Corvol, 2012-12-06 Cardiovascular diseases are the principal cause of mortality in many developed countries and are increasing in importance in developing countries where communicable diseases are being brought under control It is estimated that coronary heart disease CRD and cerebrovascular diseases are responsible for between 40 50% of all deaths High blood pressure is common in all industrialized societies and contributes importantly to CRD It is well known that genetic factors play an important role in the etiology and pathogenesis of cardiovascular diseases and contribute to an individual's susceptibility or resistance to the disease The application of modern genetic techniques has resulted in the identification of polymorphic markers that are involved in the normal regulation and function of the cardiovascular system Many of these may contribute to the individual differences in the risk for CRD and hypertension It is now known that several risk factors or protective factors with respect to cardiovascular diseases are strongly influenced by genes and it is now possible to identify individual genes contributing to cardiovascular risk A large bank of genetic knowledge relevant to CRD and hypertension has become available during the past years As a result it is now believed that CRD for example could be a good model for a feasibility study to determine a way by which preventive measures can be applied Report by the Task Force on Genetic Factors in Atherosclerotic Diseases National Heart and Lung Institute. Division of Heart and Vascular Diseases, 1976 , **Cumulated Index Medicus** , 1975 *Coronary*

*Artery Diseases* Illya Chaikovsky, Nataliia Sydorova, 2012-03-07 This book has wide geography both literally and figuratively First of all this book brings together contributions from around the world both from post industrial countries and developing world This is natural because coronary artery disease is becoming pandemic worldwide CAD is the single most frequent cause of death in developed countries causes about 1 in every 5 deaths Mortality from cardiovascular disease is predicted to reach 23.4 million in 2030 Moreover in the developing world cardiovascular disease tends to affect people at a younger age and thus could negatively affect the workforce and economic productivity The morbidity mortality and socioeconomic importance of CAD make its diagnosis and management fundamental for all practicing physicians On another hand the book widely represents geography of CAD itself i.e. many various aspects of its pathophysiology epidemiology diagnosis treatment are touched in this book This book does not pretend on complete and integral description of the Coronary artery disease Rather it contains selected issues on this complex multifactorial disease Nevertheless we hope that readers will find

Coronary Artery Disease useful for clinical practice and further research **Genetics of Fitness and Physical**
