Genetic Library Construction And Screening Advanced Techniques And Applications:

Genetic Library Construction and Screening R.C. Bird, Bruce F. Smith, 2012-12-06 Designed as an introductory text the authors cover all core strategies in the application of modern recombinant DNA technology The first chapters directly address the applications of polymerase chain reaction to a variety of problems in DNA cloning that are or have been extremely challenging using more traditional approaches and technologies These include cDNA cloning and transcript mapping mutagenesis as well as the cloning of very long transcripts and protocols using limiting amounts of total RNA Further chapters describe approaches to subtractive cloning technologies as well as novel specialized expression cloning and library screening strategies The handbook contains detailed step by step protocols and extensive hands on advice *Tissue Engineering* John P. Fisher, Antonios G. Mikos, Joseph D. Bronzino, Donald R. Peterson, 2012-12-11 Tissue engineering research continues to captivate the interest of researchers and the general public alike Popular media outlets like The New York Times Time and Wired continue to engage a wide audience and foster excitement for the field as regenerative medicine inches toward becoming a clinical reality Putting the numerous advances in the fi

Molecular Marker Applications for Improving Sugar Content in Sugarcane SWAPNA M, Sangeeta Srivastava, 2012-03-08 Sugarcane an important source of sugar plays a substantial role in world economy As a C4 plant this has very efficient system for carbohydrate metabolism through photosynthesis Crop improvement efforts have concentrated mainly on improving quality traits mainly sugar content This being a complex trait involves a large number of target genes in the metabolic pathway The complex polyploid nature of the crop makes it more difficult to pin point the key players in this complex pathway Despite its importance little is known about the exact mechanism of sucrose accumulation and its regulation in sugarcane Many enzymes have been proposed to have a key role in determining the ultimate sucrose content in sugarcane There are evidences to show that some of these like Sucrose Phosphate Synthase SPS and Sucrose Synthase SuSy are encoded by multiple genes that show organ specificity in sugarcane Especially in a crop like sugarcane where the classical techniques are of limited help in elucidating various genetic complexities molecular techniques can be of help in throwing some light on the grey areas Molecular marker strategies will be of help in understanding some aspects of sucrose metabolism and its regulation in this crop thus complementing the ongoing crop improvement programmes
