## **Genitourinary Cancer Management:**

**Genitourinary Cancer 1** D.F. Paulson, 2012-12-06 Malignant disease of the genitourinary tract continues to provide a major health hazard. The study of these disease processes has been hampered at the clinical level as there has been a serious lack of reasonably controlled treatment trials and at the basic science level as many of the animal model systems do not compare favorably with the human tumor situation. This volume defines current cancer treatment and research and its application to the control of human genitourinary malignancy. The authors have developed their chapters in such a way as to provide an up to date resource for the clinician who is involved in day to day patient care problems for the clinician investigator who is attempting to construct programs designed to evaluate the impact of current treatments and for the clinician scientist who is seeking to apply basic research technology and skills to understanding and control in this disease area. This book does not attempt to cover the entire breadth of urinary malignant disease but focuses in depth on specific problem areas. It provides the reader with sufficient background and understanding for him to be able to evaluate future studies in the areas addressed or even to develop his own projects. A reasonable balance has been established between clinical and basic research problems recognizing that the two disciplines truly are not separable. The book serves to define the state of the art and as such will be of urologic oncology.

*Therapy for Genitourinary Cancer* Herbert Lepor, Russell K. Lawson, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in depth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes that aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date and easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion first by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc and second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more
