The Scientific Sublime Alan G. Gross, 2018-06-01 The sublime evokes our awe our terror and our wonder Applied first in ancient Greece to the heights of literary expression in the 18th century the sublime was extended to nature and to the sciences enterprises that viewed the natural world as a manifestation of God's goodness power and wisdom In *The Scientific Sublime* Alan Gross reveals the modern day sublime in popular science He shows how the great popular scientists of our time Richard Feynman Stephen Hawking Steven Weinberg Brian Greene Lisa Randall Rachel Carson Stephen Jay Gould Steven Pinker Richard Dawkins and E O Wilson evoke the

**Ferocious Minds** Damien Broderick,2005-01-01 Two centuries ago the first Enlightenment failed when its dream of reason smashed into the passions and fury of stubborn humans Without a deep broad understanding of the world the emerging Enlightenment was left floundering its best impulses perverted into the bloody excess of the French Revolution Arguably its idealism and noble goals led directly and shockingly to the 20th century s totalitarian nightmares Now the 21st century is learning anew the Faustian hunger to know everything that can be known But Enlightenment values of reason and tolerance enriched by new knowledge face a complex world no less eager to embrace medieval terrorism and ancient superstitions a world bizarrely denying itself many of the fresh opportunities and insights availed by science Can we find cures for poverty unhappiness ignorance the ruination of the planet aging and perhaps for death itself If so should we Damien Broderick s own ferocious mind invites you to explore today s unexpected treasure house of understanding and provides enticing glimpses of tomorrow s

*Interference Patterns* Jon Adams,2007 The story of twentieth century literary criticism can be told as a story about methodological anxieties anxieties fostered by the success of the sciences and enacted by critics who have tried to set the study of literary texts on a more scientific basis At the macrostructural level were taxonomists Northrop Frye attempted to locate literature s conceptual center and organize Ptolemaic satellite myths around it inferring the existence of literature from the possibility of criticism linguistic microstructure seeking and finding unsuspected levels of complexity first in Baudelaire and Shakespeare then in lesser poets then in advertising slogans After the collapse of the structuralist project calls for the scientization of literary study have increasingly come from outside the humanities where despairing of criticism s native efforts cognitive scientists and

*Knowing and the Mystique of Logic and Rules* P. Naur, 2013-03-14 Human knowing is examined as it emerges from classical empirical psychology with its ramifications into language computing science and scholarship While the discussion takes empirical support from a wide range claims for the significance of logic and rules are challenged throughout Highlights of the discussion knowing is a matter of habits or dispositions that guide the person s stream of consciousness rules of language have no significance in language production and understanding being descriptions of linguistic styles statements that may be true or false enter into ordinary linguistic activity not as elements of messages but merely as summaries of situations with a view to action in computer programming the significance of logic proof and formalized description is incidental and subject to the programmer s personality analysis of computer modelling of the mental activity shows that in describing human knowing the computer is irrelevant in accounting for the scholarly scientific activity logic and rules are impotent a novel theory scholarship and science have coherent descriptions as their core The discussion addresses questions that are basic to advanced applications of computers and to students of language and science
