KAPG GEOPHYSICAL MONOGRAPH

Editor-in-Chief: A. ADAM

Physical studies of the Earth, and especially of its upper parts, considerably meet problems which implicitly or explicitly to which the distribution of thermal energy has a dominant role. Therefore, the knowledge of the amount of heat flowing through the Earth's surface is of fundamental importance to geophysics. The very strong dependence of electrical conductivity on temperature makes the electric resistance technique studies a very important tool for the investigation of geothermal activity in the depth.

This monograph contains the results made by geoelectric and geothermics in the socialist (so-called KAPG) countries during the last ten years. The monograph brings together in a series of articles comprehensive presentation of both theoretical and practical aspects of these geophysical disciplines and their cooperation.
