The Rural Richard Munton, 2017-05-15 The rural has long been regarded as an important site of geographical inquiry even if our understanding of it has not always been treated as conceptually different from the urban That said rural research has pursued a number of distinct empirical agendas ranging from the operation and impacts of agribusiness to local resistance to global food supply chains to differing representations of the rural In doing so rural geographers have critically examined the relevance and significance of ideas drawn from numerous traditions including political economy ecological modernization and cultural theory amending them as appropriate in their search to understand the nature and trajectory of rural areas Up until the 1980s attention remained largely focused upon agriculture as the primary land use but increasingly new forms of rural consumption housing recreation nature conservation have taken centre stage as the primacy of local agricultures has been undermined by reduced state protection and new rural populations which have migrated out from the city More recently research has been dominated by the cultural turn with particular emphases upon society nature relations interpretations of landscape marginalised others and analyses of the relations between representation and practice In the last decade a more holistic view of the rural bringing together different aspects of the two previous themes has emerged through more politically oriented studies of rural governance concerned with the functioning of interest groups participation protest and the allocation and management of resources The volume is thus structured into three sections concerned with agriculture and food the rural and rural governance The great majority of the selected papers combine both empirical material often highly informative case studies and important conceptual arguments about change in the rural condition that can be linked to ideas being employed elsewhere in Geography and the Social Sciences more generally These critical reflections have been drawn very largely from research conducted in advanced economies which at least provide some commonality of experience allowing the transfer of ideas between what otherwise might be seen as very differing

Constructing The Countryside Terry Marsden, 1993-03-25 As the first book in the Restructuring Rural Areas series Constructing the countryside presents a new methodological approach to the analysis of rural change The authors seek to link wider developments in the global political economy to the behaviour of local actors and in so doing they place research into rural studies much more firmly than hitherto in the mainstream of social science enquiry The outcome is a book that promotes a truly interdisciplinary approach through which the constant reconstruction of the countryside can be properly understood This holistic perspective sustained by an historical analysis of rural change has been made possible by the extensive research experience of the authors The book is a product of the work done at the London Countryside Research Centre which was set up in 1989 by the Economic and Social Research Council The Centre's research has focused upon the social and political forces for change in rural areas and how these relate to rapid alterations in national economic circumstances and to public policies affecting the countryside for example the Common Agricultural Policy of the EC On the one hand the book provides a set of insights into the trends that will guide rural change in advanced economies into the next century on the other it offers a challenging account of how they can be investigated Constructing the countryside will appeal to both students and staff in a wide range of social science disciplines including agricultural economics environmental management planning land economy geography and rural sociology and to all those concerned with the future development of rural areas This book is intended for students and researchers in rural planning and environmental geographical studies whether within a geographical or a sociological milieu

Geography in America at the Dawn of the 21st Century Gary L. Gaile, Cort J. Willmott, 2005 Geography in America at the Dawn of the 21st Century surveys American geographers current

research in their specialty areas and tracks trends and innovations in the many subfields of geography. As such, it is both a state of the discipline assessment and a topical reference. It includes an introduction by the editors and 47 chapters, each on a specific specialty. The authors of each chapter were chosen by their specialty group of the American Association of Geographers (AAG). Based on a process of review and revision, the chapters in this volume have become truly representative of the recent scholarship of American geographers. While it focuses on work since 1990, it additionally includes related prior work and work by non-American geographers. The initial *Geography in America* was published in 1989 and has become a benchmark reference of American geographical research during the 1980s. This latest volume is completely new and features a preface written by the eminent geographer Gilbert White. [Economic Development in Rural Areas](#) Prof. Dr. Elmar Kulke, Prof. Dr. Peter Dannenberg, 2015-06-28. Analysing the ongoing changes and dynamics in rural development from a functional perspective through a series of case studies from the global north and south, this volume deepens our understanding of the importance of new functional and multifunctional approaches in policy practice and theory. In rural areas of industrialized societies, food production as a basis for growth and employment has been declining for many decades. In the Global South, on the other hand, food production is still often the most important factor for socio-economic development. However, rural areas both in the industrialized north and in the global south are facing new challenges which lead to significant changes and threats to their development. New forms of food production but also new functional e.g. housing or business parks and often multifunctional approaches are being discussed and practiced, yet it remains unclear the extent to which these result in better or more sustainable development of rural areas.
