## Geology Of Canadian Gold Deposits:

Geological Classification of Canadian Gold Deposits Knud Howard Poulsen, F. Robert, B. Dubé, Geological Survey of Canada, 2000 This bulletin proposes a geological classification of lode gold deposits based largely on the nature of the ore and on the geological settings of the deposits Sixteen common types of bedrock gold deposits are distinguished and their main geological attributes are summarized These do not correspond to an equal number of genetic types many of these deposit types represent different components of larger hydrothermal systems and are genetically related Most of the deposit types identified are represented by at least one large example containing over 100 tonnes of gold Descriptions are provided of Canadian gold deposits including Archean Proterozoic deposits in the Canadian Shield Late Proterozoic to Palaeozoic deposits in the Appalachian Orogen and Mesozoic to Cenozoic deposits in the Cordilleran Orogen The final section discusses the application of gold deposit models

*Geology of Canadian Gold Deposits* R. W. Hodder, W. Petruk, 1982 Papers of a symposium held at Val d'Or Quebec featuring gold deposits of the Abitibi Greenstone Belt from Val d'Or to Timmins and including some other gold deposits in Canada Current descriptions of the deposits with thoughts on their genesis and techniques used in exploration are presented

**The Metallogeny of Lode Gold Deposits** Ulrich Kretschmar, Derek McBride, 2015-11-24 The Metallogeny of Lode Gold Deposits A Syngenetic Perspective is a synthesis of lode gold vein forming processes addressing the commonality in similar worldwide deposits The book's empirical model incorporates widely known and accepted principles of ore deposition and shows how it applies in the volcanic sedimentary greenstone belt environment Several chapters detail outcrop maps and photos of field occurrences and textures The interpretations flow directly from the authors field work and are coupled with analyses of underlying physical processes Utilizing detailed geological mapping field work and chemical analyses as the basis of a syngenetic formation mode the text arms readers with the tools necessary to accurately analyze and interpret new data on the subject This includes information on decoding the significance of asymmetry in vein formation as well as the role of lamprophyres in gold camps how Archean geology requires integration into a lode vein formation model and how to develop an understanding of the worldwide applicability of gold cycles to lode vein formation and exploration and how it can be applied to deposits of all ages Presents the first book to galvanize lode gold research into a single authoritative reference Simplifies the complexity of lode gold's underlying processes and presents valid concepts surrounding the lode gold forming environment Features color figures illustrations and photos that enrich the content's focus and aid in the retention of key concepts
