Geometric Aspects of Dwork Theory Alan Adolphson, Francesco Baldassarri, Pierre Berthelot (mathématicien.), François Loeser (mathématicien.), 2004 *Geometric Aspects of Dwork Theory* Alan Adolphson, 2004

Algebraic Theory of Differential Equations, **Commutative Algebra** Irena Peeva, 2013-02-01 This contributed volume brings together the highest quality expository papers written by leaders and talented junior mathematicians in the field of Commutative Algebra Contributions cover a very wide range of topics including core areas in Commutative Algebra and also relations to Algebraic Geometry Algebraic Combinatorics Hyperplane Arrangements Homological Algebra and String Theory The book aims to showcase the area especially for the benefit of junior mathematicians and researchers who are new to the field it will aid them in broadening their background and to gain a deeper understanding of the current research in this area Exciting developments are surveyed and many open problems are discussed with the aspiration to inspire the readers and foster further research *p-adic Differential Equations* Kiran S. Kedlaya, 2022-06-09 A detailed and unified treatment of p -adic differential equations from the basic principles to the current frontiers of research

Arakelov Geometry over Adelic Curves Huayi Chen, Atsushi Moriawaki, 2020-01-29 The purpose of this book is to build the fundament of an Arakelov theory over adelic curves in order to provide a unified framework for research on arithmetic geometry in several directions By adelic curve is meant a field equipped with a family of absolute values parametrized by a measure space such that the logarithmic absolute value of each non zero element of the field is an integrable function on the measure space In the literature such construction has been discussed in various settings which are apparently transversal to each other The authors first formalize the notion of adelic curves and discuss in a systematic way its algebraic covers which are important in the study of height theory of algebraic points beyond Weil Lang's height theory They then establish a theory of adelic vector bundles on adelic curves which considerably generalizes the classic geometry of vector bundles or that of Hermitian vector bundles over an arithmetic curve They focus on an analogue of the slope theory in the setting of adelic curves and in particular estimate the minimal slope of tensor product adelic vector bundles Finally by using the adelic vector bundles as a tool a birational Arakelov geometry for projective variety over an adelic curve is developed As an application a vast generalization of Nakai Moishezon's criterion of positivity is proven in clarifying the arguments of geometric nature from several fundamental results in the classic geometry of numbers Assuming basic knowledge of algebraic geometry and algebraic number theory the book is almost self contained It is suitable for researchers in arithmetic geometry as well as graduate students focusing on these topics for their doctoral theses **P-adic Aspects Of Modular Forms** Baskar Balasubramanyam, A Raghuram, Jacques Tilouine, Haruzo Hida, 2016-06-14 The aim of this book is to give a systematic exposition of results in some important cases where p -adic families and p -adic L -functions are studied We first look at p -adic families in the following cases general linear groups symplectic groups and definite unitary groups We also look at applications of this theory to modularity lifting

problems We finally consider p -adic L functions for GL_2 the p -adic adjoint L functions and some cases of higher GL_n

Intrinsic Approach to Galois Theory of q -Difference Equations Lucia Di Vizio, Charlotte Hardouin, 2022-08-31
View the abstract *Advances in the Theory of Numbers* Ayşe Alaca, Şaban Alaca, Kenneth S. Williams, 2015-10-28 The theory of numbers continues to occupy a central place in modern mathematics because of both its long history over many centuries as well as its many diverse applications to other fields such as discrete mathematics cryptography and coding theory The proof by Andrew Wiles with Richard Taylor of Fermat's last theorem published in 1995 illustrates the high level of difficulty of problems encountered in number theoretic research as well as the usefulness of the new ideas arising from its proof The thirteenth conference of the Canadian Number Theory Association was held at Carleton University Ottawa Ontario Canada from June 16 to 20 2014 Ninety nine talks were presented at the conference on the theme of advances in the theory of numbers Topics of the talks reflected the diversity of current trends and activities in modern number theory These topics included modular forms hypergeometric functions elliptic curves distribution of prime numbers diophantine equations L functions Diophantine approximation and many more This volume contains some of the papers presented at the conference All papers were refereed The high quality of the articles and their contribution to current research directions make this volume a must for any mathematics library and is particularly relevant to researchers and graduate students with an interest in number theory The editors hope that this volume will serve as both a resource and an inspiration to future generations of researchers in the theory of numbers **Integration of One-forms on p -adic Analytic Spaces. (AM-162)** Vladimir G. Berkovich, 2007 Among the many differences between classical and p -adic objects those related to differential equations occupy a special place For example a closed p -adic analytic one form defined on a simply connected domain does not necessarily have a primitive in the class of analytic functions In the early 1980s Robert Coleman discovered a way to construct primitives of analytic one forms on certain smooth p -adic analytic curves in a bigger class of functions Since then there have been several attempts to generalize his ideas to smooth p -adic analytic spaces of higher dimension but the spaces considered were invariably associated with algebraic varieties This book aims to show that every smooth p -adic analytic space is provided with a sheaf of functions that includes all analytic ones and satisfies a uniqueness property It also contains local primitives of all closed one forms with coefficients in the sheaf that in the case considered by Coleman coincide with those he constructed In consequence one constructs a parallel transport of local solutions of a unipotent differential equation and an integral of a closed one form along a path so that both depend nontrivially on the homotopy class of the path Both the author's previous results on geometric properties of smooth p -adic analytic spaces and the theory of isocrystals are further developed in this book which is aimed at graduate students and mathematicians working in the areas of non Archimedean analytic geometry number theory and algebraic geometry **Singularity Theory** Denis Chacón, 2007 The Singularity School and Conference took place in Luminy Marseille from January 24th to February 25th 2005 More than 180

mathematicians from over 30 countries converged to discuss recent developments in singularity theory The volume contains the elementary and advanced courses conducted by singularities specialists during the conference general lectures on singularity theory and lectures on applications of the theory to various domains The subjects range from geometry and topology of singularities through real and complex singularities to applications of singularities **Diophantine Geometry**

Umberto Zannier,2007-06-27 This book contains research articles on Diophantine Geometry written by participants of a research program held at the Ennio De Giorgi Mathematical Research Center in Pisa Italy between April and July 2005 The authors are eminent experts in the field and present several subfields of the main topic The volume provides a broad overview of recent research developments **Mathematical Reviews** ,2006 Annales scientifiques de l'École normale supérieure Ecole normale supérieure (France),2006 *Annales Scientifiques de L'École Normale Supérieure* ,2006

Applications of Curves over Finite Fields Michael D. Fried,1999 This volume presents the results of the AMS IMS SIAM Joint Summer Research Conference held at the University of Washington Seattle The talks were devoted to various aspects of the theory of algebraic curves over finite fields and its numerous applications The three basic themes are the following 1 Curves with many rational points Several articles describe main approaches to the construction of such curves the Drinfeld modules and fiber product methods the moduli space approach and the constructions using classical curves 2 Monodromy groups of characteristic p covers A number of authors presented the results and conjectures related to the study of the monodromy groups of curves over finite fields In particular they study the monodromy groups from genus 0 covers reductions of covers and explicit computation of monodromy groups over finite fields 3 Zeta functions and trace formulas To a large extent papers devoted to this topic reflect the contributions of Professor Bernard Dwork and his students This conference was the last attended by Professor Dwork before his death and several papers inspired by his presence include commentaries about the applications of trace formulas and L function The volume also contains a detailed introduction paper by Professor Michael Fried which helps the reader to navigate the material presented in the book **The Bulletin of Mathematics Books** ,1992 **Gazette des mathématiciens** ,2007 Whitaker's Book List ,1991 **Books in Print Supplement** ,2002
