**Good Toys, Bad Toys** Andrew McClary, 2015-02-18 In early America most children had only a few toys and parents received advice from family and friends on the best ways to make and use toys By the early 1900s the Industrial Revolution was producing a new world of toys and giving more parents the wealth to buy them Mass media also sang the praises of these new factory made store bought toys but that began to change as early as the mid 1900s when the mass media was used to inform parents of the many dangers of children s toys Many encourage violence sexism racism and some are actually unsafe and unhealthy The development of children s toys from early America to the present time and the shifting opinions of them expressed by parents and the mass media throughout this time are the main subjects of this book The first section discusses the many problems with toys while the second puts these problems in historical perspective How have these problems changed and are still changing today Might today s toys be about to enter a time when they will be better than ever The third section argues that many media toy watchers are biased toward the negative giving toys more of a black eye than they deserve and considers the challenges that face today s parents as they try to choose the best toys for their children

**Space Structures** A. Loeb, 2012-12-06 xiv aggregates this touches on the very nature of things The concept of statistical symmetry which Loeb develops is particularly important it emphasizes the limitations in seemingly random aggregates and for permits general statements of which the crystallographer s sym metries are only special cases The reductionist and holistic approaches to the world have been at war with each other since the times of the Greek philosophers and before In nature parts clearly do fit together into real structures and the parts are affected by their

environment The problem is one of understanding The mystery that remains lies largely in the nature of structural hierarchy for the human mind can examine nature on many different scales sequentially but not simultaneously Arthur Loeb's monograph is a fundamental one but one can sense a development from the relations between his zero and three dimensional cells to the far more complex world of organisms and concepts It is structure that makes the difference between a cornfield and a cake between an aggregate of cells and a human being between a random group of human beings and a society We can perceive anything only when we perceive its structure and we think by structural analogy and comparison Several books have been published showing the beauty of form in nature This one has the beauty of a work of art but it grows out of rigorous mathematics and from the simplest of bases dimensionality extent and valency **Official Gazette of the United States Patent and Trademark Office**, 1997 Constructions of Childhood in Ancient Greece and Italy Ada Cohen, Jeremy B. Rutter, 2007 These 20 papers explore ancient notions and experiences of childhood around the Mediterranean from prehistory to late antiquity They are grouped into sections on Families Socialization and Enculturation Rituals and Life Transitions Gender and Representation Burial Commemoration and Childhood and the Classical Tradition The contributors come from a range of different disciplines including art history archaeology classical philology and physical anthropology OE [publication], 1970 **Childhood by Design** Megan Brandow-Faller, 2018-04-19 Informed by the analytical practices of the interdisciplinary material turn and social historical studies of childhood *Childhood By Design Toys and the Material Culture of Childhood* offers new approaches to the material world of childhood and design culture for children This volume situates toys and design culture for children within broader narratives on history art design and the decorative arts where toy design has traditionally been viewed as an aberration from more serious pursuits The essays included treat toys not merely as unproblematic reflections of socio cultural constructions of childhood but consider how design culture actively shaped commodified and materialized shifting discursive constellations surrounding childhood and children Focusing on the new array of material objects designed in response to the modern invention of childhood what we might refer to as objects for a childhood by design *Childhood by Design* explores dynamic tensions between theory and practice discursive constructions and lived experience as embodied in the material culture of childhood Contributions from and between a variety of disciplinary perspectives including history art history material cultural studies decorative arts design history and childhood studies are represented critically linking historical discourses of childhood with close study of material objects and design culture Chronologically the volume spans the 18th century which witnessed the invention of the toy as an educational plaything and a proliferation of new material artifacts designed expressly for children's use through the 19th century expansion of factory based methods of toy production facilitating accuracy in miniaturization and a new vocabulary of design objects coinciding with the recognition of childhood innocence and physical separation within the household towards the intersection of early 20th century child centered pedagogy and modernist approaches to nursery and

furniture design through the changing consumption and sales practices of the postwar period marketing directly to children through television film and other digital media and into the present where the line between the material culture of childhood and adulthood is increasingly blurred Mathematics Education in the Early Years Tamsin Meaney, Ola Helenius, Maria L. Johansson, Troels Lange, Anna Wernberg, 2016-01-22 This book presents chapters based on papers presented at the second POEM conference on early mathematics learning These chapters broaden the discussion about mathematics education in early childhood by exploring the debate about construction versus instruction Specific sections investigate the teaching and learning of mathematical processes and mathematical content early childhood teacher development transitions for young children between home and preschool between home and school and between preschool and school The chapters use a range of innovative theoretical and methodological approaches which will form an interesting basis for future research in this area
