**Geometric Modeling and Processing 2000** Ralph Martin,Wenping Wang,2000 Annotation The 39 papers anticipate the first in a series of biennial international conferences on solid modeling shape representation and geometric computation all of which are procedures important in a wide range of disciplines including computer graphics computer aided design computer vision medical imaging and scientific computation The largest number of them address various ideas in curve and surface modeling from long standing issues such as interpolation and approximation to recently popular ideas such as polyhedral and subdivision methods and more specific areas such as blending deformations implicitization and parametrized design Attracting the second most attention is solid modeling from such perspectives as inputting models from sketches and

from scanned data subdivision modeling and trimmed patches Discussions of applications include polygon mesh refinement in computer graphics modeling the draping of cloth generating moulds and watermarking polygon meshes for security There is no subject index Annotation copyrighted by Book News Inc Portland OR

**Meshless Methods for Volume Visualization** Christopher S. Co,2006 Modeling with Ambient B-Splines Nicole Lehmann,2014-01-17 The present thesis introduces a new approach for the generation of CK approximants of functions defined on closed submanifolds for arbitrary  $k, N$  In case a function on a surface resembles the three coordinates of a topologically equivalent surface in  $R^3$  we even obtain  $C_k$  approximants of closed surfaces of arbitrary topology The key idea of our method is a constant extension of the target function into the submanifold's ambient space In case the reference submanifolds are embedded and  $C_k$  the usage of standard tensor product B splines for the approximation of the extended function is straightforward We obtain a  $C_k$  approximation of the target function by restricting the approximant to the reference submanifold We illustrate our method by an easy example in  $R^2$  and verify its practicality by application oriented examples in  $R^3$  The first treats the approximation of the geoid an important reference magnitude within geodesy and geophysics The second and third example treat the approximation of geometric models The usage of B splines not only guarantees full approximation power but also allows a canonical access to adaptive refinement strategies We elaborate on two hierarchical techniques and successfully apply them to the introduced examples Concerning the modeling of surfaces by the new approach we derive numerically robust formulas for the determination of normal vectors and curvature information of a target surface which only need the spline approximant as well as the normal vectors and curvature information of the reference surface

Advances in Multiresolution for Geometric Modelling Neil Dodgson,Michael S. Floater,Malcolm Sabin,2006-05-24 Multiresolution methods in geometric modelling are concerned with the generation representation and manipulation of geometric objects at several levels of detail Applications include fast visualization and rendering as well as coding compression and digital transmission of 3D geometric objects This book marks the culmination of the four year EU funded research project Multiresolution in Geometric Modelling MINGLE The book contains seven survey papers providing a detailed overview of recent advances in the various fields within multiresolution modelling and sixteen additional research papers Each of the seven parts of the book starts with a survey paper followed by the associated research papers in that area

All papers were originally presented at the MINGLE 2003 workshop held at Emmanuel College Cambridge UK 9 11 September 2003

**Tutorials on Multiresolution in Geometric Modelling** Armin Iske, Ewald Quak, Michael S. Floater, 2013-03-09 Multiresolution methods in geometric modelling are concerned with the generation representation and manipulation of geometric objects at several levels of detail Applications include fast visualization and rendering as well as coding compression and digital transmission of 3D geometric objects This book is based on thirteen tutorials presented during the European Summer School Principles of Multiresolution in Geometric Modelling held at the Munich University of Technology Germany during August 22 30 2001 The book covers subdivision wavelets scattered data modelling and coding and data structures The tutorials are designed to be introductory in character and include supporting exercises Other supplementary material and software can be downloaded from the Web Site [www.ma.tum.de/primus](http://www.ma.tum.de/primus) 2001

**Topics in Algebraic Geometry and Geometric Modeling** Ron Goldman, Rimvydas Krasauskas, 2003 Algebraic geometry and geometric modeling both deal with curves and surfaces generated by polynomial equations Algebraic geometry investigates the theoretical properties of polynomial curves and surfaces geometric modeling uses polynomial piecewise polynomial and rational curves and surfaces to build computer models of mechanical components and assemblies for industrial design and manufacture The NSF sponsored the four day Vilnius Workshop on Algebraic Geometry and Geometric Modeling which brought together some of the top experts in the two research communities to examine a wide range of topics of interest to both fields This volume is an outgrowth of that workshop Included are surveys tutorials and research papers In addition the editors have included a translation of Minding's 1841 paper On the determination of the degree of an equations obtained by elimination which foreshadows the modern application of mixed volumes in algebraic geometry The volume is suitable for mathematicians computer scientists and engineers interested in applications of algebraic geometry to geometric modeling

Topics in Numerical Analysis G. Alefeld, Xiaojun Chen, 2001-09-11 This collection of papers on numerical analysis with special emphasis on nonlinear problems covers a broad spectrum of fields Several papers are involved in applying numerical methods for proving the existence of solutions of nonlinear problems e.g. of boundary problems or of obstacle problems Naturally the solution of linear and nonlinear problems by iterative methods is the subject of a couple of papers Here topics like the fast verification of solutions of monotone matrix equations the convergence of linear asynchronous iteration with spectral radius of modulus one or aggregation and disaggregation methods for p cyclic Markov chains are treated On the other hand papers involved in optimization problems can be found Nearly all fields of modern numerical analysis are touched by at least one paper

*Knowledge Acquisition, Modeling and Management* Dieter Fensel, Rudi Studer, 1999-06-22 This book constitutes the refereed proceedings of the 11th European Workshop on Knowledge Acquisition Modeling and Management EKAW 99 held at Dagstuhl Castle Germany in May 1999 The volume presents 16 revised full papers and 15 revised short papers were carefully reviewed and selected from a high number of

submissions Also included are two invited papers The papers address issues of knowledge acquisition i e the process of extracting creating structuring knowledge etc of knowledge level modeling for knowledge based systems and of applying and redefining this work in a knowledge management and knowledge engineering context

**Meshing, Geometric Modeling and Numerical Simulation, Volume 2** Paul Louis George,Houman Borouchaki,Frederic Alauzet,Patrick Laug,Adrien Loseille,Loic Marechal,2019-01-25 Triangulations and more precisely meshes are at the heart of many problems relating to a wide variety of scientific disciplines and in particular numerical simulations of all kinds of physical phenomena In numerical simulations the functional spaces of approximation used to search for solutions are defined from meshes and in this sense these meshes play a fundamental role This strong link between meshes and functional spaces leads us to consider advanced simulation methods in which the meshes are adapted to the behaviors of the underlying physical phenomena This book presents the basic elements of this vision of meshing These mesh adaptations are generally governed by a posteriori error estimators representing an increase of the error with respect to a size or metric Independently of this metric of calculation compliance with a geometry can also be calculated using a so called geometric metric The notion of mesh thus finds its meaning in the metric of its elements

*Knowledge Acquisition, Modeling and Management* Rudi Studer,2003-06-29 Past Present and Future of Knowledge Acquisition This book contains the proceedings of the 11th European Workshop on Knowledge Acquisition Modeling and Management EKAW 99 held at Dagstuhl Castle Germany in May of 1999 This continuity and the high number of submissions reflect the mature status of the knowledge acquisition community Knowledge Acquisition started as an attempt to solve the main bottleneck in developing expert systems now called knowledge based systems Acquiring knowledge from a human expert Various methods and tools have been developed to improve this process These approaches significantly reduced the cost of developing knowledge based systems However these systems often only partially fulfilled the task they were developed for and maintenance remained an unsolved problem This required a paradigm shift that views the development process of knowledge based systems as a modeling activity Instead of simply transferring human knowledge into machine readable code building a knowledge based system is now viewed as a modeling activity A so called knowledge model is constructed in interaction with users and experts This model need not necessarily reflect the already available human expertise Instead it should provide a knowledge level characterization of the knowledge that is required by the system to solve the application task Economy and quality in system development and maintainability are achieved by reusable problem solving methods and ontologies The former describe the reasoning process of the knowledge based system i e the algorithms it uses and the latter describe the knowledge structures it uses i e the data structures Both abstract from specific application and domain specific circumstances to enable knowledge reuse

*Reliable Implementation of Real Number Algorithms: Theory and Practice* Peter Hertling, Christoph

M. Hoffmann, Wolfram Luther, Nathalie Revol, 2008-08-06 A large amount of the capacity of today's computers is used for computations that can be described as computations involving real numbers. In this book the focus is on a problem arising particularly in real number computations: the problem of verified or reliable computations. Since real numbers are objects containing an infinite amount of information they cannot be represented precisely on a computer. This leads to the well-known problems caused by unverified implementations of real number algorithms using finite precision. While this is traditionally seen to be a problem in numerical mathematics there are also several scientific communities in computer science that are dealing with this problem. This book is a follow-up of the Dagstuhl Seminar 06021 on Reliable Implementation of Real Number Algorithms: Theory and Practice which took place January 8-13, 2006. It was intended to stimulate an exchange of ideas between the different communities that deal with the problem of reliable implementation of real number algorithms either from a theoretical or from a practical point of view. Forty-eight researchers from many different countries and many different disciplines gathered in the castle of Dagstuhl to exchange views and ideas in a relaxed atmosphere. The program consisted of 35 talks of 30 minutes each and of three evening sessions with additional presentations and discussions. There were also lively discussions about different theoretical models and practical approaches for reliable real number computations.
