ElMaraghy, 2006 Advances in Design examines recent advances and innovations in product design paradigms methods tools and applications It presents fifty two selected papers which were presented at the 14th CIRP International Design Seminar held in May 2004 This book will be bought by postgraduate and senior undergraduate students studying product design It will also be of interest to researchers and practitioners working in the field of product design

The Configuration Space Method for Kinematic Design of Mechanisms Elisha Sacks, Leo Joskowicz, 2010 A novel algorithmic approach to mechanism design based on a geometric representation of kinematic function called configuration space partitions This book presents the configuration space method for computer aided design of mechanisms with changing part contacts Configuration space is a complete and compact geometric representation of part motions and part interactions that supports the core mechanism design tasks of analysis synthesis and tolerancing It is the first general algorithmic treatment of the kinematics of higher pairs with changing contacts It will help designers detect and

correct design flaws and unexpected kinematic behaviors as demonstrated in the book's four case studies taken from industry. After presenting the configuration space framework and algorithms for mechanism kinematics, the authors describe algorithms for kinematic analysis, tolerancing, and synthesis based on configuration spaces. The case studies follow, illustrating the application of the configuration space method to the analysis and design of automotive micro-mechanical and optical mechanisms. Appendixes offer a catalog of higher pair mechanisms and a description of HIPAIR, an open source C mechanical design system that implements some of the configuration space methods described in the book, including configuration space visualization and kinematic simulation. HIPAIR comes with an interactive graphical user interface and many sample mechanism input files. *The Configuration Space Method for Kinematic Design of Mechanisms* will be a valuable resource for students, researchers, and engineers in mechanical engineering, computer science, and robotics.

Global Product Development Alain Bernard, 2011-05-05 This book of proceedings is the synthesis of all the papers, including keynotes, presented during the 20th CIRP Design conference. The book is structured with respect to several topics; in fact, the main topics that serve at structuring the program. For each of them, high quality papers are provided. The main topic of the conference was Global Product Development. This includes technical, organizational, informational, theoretical, environmental, performance, evaluation, knowledge management, and collaborative aspects. Special sessions were related to innovation in particular: extraction of knowledge from patents.

The Design Guidelines Collaborative Framework Stefano Filippi, Ilaria Cristofolini, 2009-12-04 In the industrial design and engineering field, product lifecycle, product development, design process, Design for X, etc., constitute only a small sample of terms related to the generation of quality products. Current best practices cover widely different knowledge domains; in trying to exploit them to the best advantage, individually and in synergy. Moreover, standards become increasingly more helpful in interfacing these domains, and they are enlarging their coverage by going beyond the single domain boundary to connect closely different aspects of the product lifecycle. The degree of complexity of each domain makes impossible the presence of multipurpose competencies and skills; there is almost always the need for interacting and integrating people and resources in some effective way. These are the best conditions for the birth of theories, methodologies, models, architectures, systems, procedures, algorithms, software packages, etc., in order to help in some way the synergic work of all the actors involved in the product lifecycle. This brief introduction contains all the main themes developed in this book, starting from the analysis of the design and engineering scenarios to arrive at the development and adoption of a framework for product design and process reconfiguration. In fact, the core consists of the description of the Design GuideLines Collaborative Framework (DGLs CF), a methodological approach that generates a collaborative environment where designers, manufacturers, and inspectors can find the right and effective meeting point to share their knowledge and skills in order to contribute to the optimum generation of quality products.

AMST'02 Advanced Manufacturing Systems and Technology Elso Kuljanic, 2014-05-04 The work contains the results of the Sixth International Conference on

Advanced Manufacturing Systems and Technology AMST 02 which was held in Udine in June 2002 It presents up to date information on the latest developments research results and experience in the field of machining of conventional and advanced materials machine tools and flexible manufacturing systems forming nonconventional processes robotics measurement and control quality design and ecodesign rapid prototyping rapid tooling and manufacturing materials and mechanics

Smart Product Engineering Michael Abramovici, Rainer Stark, 2013-03-14 The collection of papers in this book comprises the proceedings of the 23rd CIRP Design Conference held between March 11th and March 13th 2013 at the Ruhr University Bochum in Germany The event was organized in cooperation with the German Academic Society for Product Development WiGeP The focus of the conference was on Smart Product Engineering covering two major aspects of modern product creation the development of intelligent smart products as well as the new smart approach of engineering explicitly taking into account consistent systems integration Throughout the 97 papers contained in these proceedings a range of topics are covered amongst them the different facets and aspects of what makes a product or an engineering solution smart In addition the conference papers investigate new ways of engineering for production planning and collaboration towards Smart Product Engineering The publications provide a solid insight into the pressing issues of modern digital product creation facing increasing challenges in a rapidly changing industrial environment They also give implicit advice how a smart product or engineering solution processes methods and tools needs to be designed and implemented in order to become successful
