professional experience      The 'Resource' Approach to Mathematics Education Luc Trouche, Ghislaine Gueudet, Birgit Pepin, 2019-11-29 This edited volume will help educators better analyze methodological and practical tools designed to aid classroom instruction. It features papers that explore the need to create a system in order to fully meet the uncertainties and developments of modern educational phenomena. These have emerged due to the abundance of digital resources and new forms of collective work. The collected papers offer new perspectives to a rising field of research known as the Documentational Approach to Didactics. This framework was first created by the editors of this book. It seeks to develop a deeper understanding of mathematics teaching expertise. Readers will gain insight into how to meet the theoretical questions brought about by digitalization. These include how to analyze teachers' work when they prepare for their teaching, how to conceptualize the relationships between individual and collective work, and how to follow the related processes over the long term. The contributors also provide a comparative view in terms of contrasting selected phenomena across different educational cultures and education systems. For instance, they consider how differences in curriculum resources are available to teachers and how teachers make use of them to shape instruction. Coverage also considers the extent to which teachers make use of additional material, particularly those available through the global marketplace on the Internet. This book builds on works from the Resources 2018 Conference. Understanding teachers' work through their interactions with resources for teaching held in Lyon, France.

**Visual Thinking in Mathematics** Marcus Giaquinto, 2007-07-05 Drawing from philosophical work on the nature of concepts and from empirical studies of visual perception, mental imagery, and numerical cognition, Giaquinto explores a major source of our grasp of mathematics using examples from basic geometry, arithmetic, algebra, and real analysis.

The Tragic Science George F. DeMartino, 2024-05-31 A forceful critique of the social science that has ruled and damaged the modern world. The practice of economics as economists will tell you is a powerful force for good. Economists are the guardians of the world's economies and financial systems. The applications of economic theory can alleviate poverty, reduce disease, and promote sustainability. While this narrative has been successfully propagated by economists, it belies a more challenging truth: economic interventions, including those economists deem successful, also cause harm. Sometimes the harm is manageable and short-lived. But just as often the harm is deep, enduring, and even irreparable. And too often the harm falls on those least able to survive it. In *The Tragic Science*, George F. DeMartino says what economists have too long repressed: that economists do great harm even as they aspire to do good. Economist-induced harm, DeMartino shows, results in part from economists' irreparable ignorance from the fact that they know far less than they tend to believe they know, and from disciplinary training that treats the human tolls of economic policies and interventions as simply the costs of promoting social betterment. DeMartino details the complicated nature of economic harm, explores economists' frequent failure to recognize it,

and makes a sobering case for professional humility and for genuine respect for those who stand to be harmed by economists practice At a moment in history when the economics profession holds enormous power DeMartino s work demonstrates the downside of its influence and the responsibility facing those who practice the tragic science     Shading, Lighting, and Rendering with Blender EEVEE Sammie Crowder,2022-04-25 Get to grips with new real time animation techniques and tricks to improve your artistic and technical skills in shading 3D rendering and scene creation using Blender 3 0 Key Features Learn real time rendering engine concepts by creating three projects Understand how to update workflows to Blender 3 0 Explore intermediate to advanced level tutorials on creating art inside Blender Book DescriptionBlender is the most important up and coming 3D software package in the world EEVEE a state of the art real time rendering engine is a fairly new addition to Blender and provides the capacity to create artwork at blazing speed almost 12 times faster than Cycles Lighting Shading and Rendering with Blender s EEVEE provides a high level overview of what EEVEE is capable of then teaches users about Geometry Nodes Rendering Techniques using shortcuts like Kitbashing and Alphas to speed up scene creation volumetrics reflections adding lights cameras and even special effects like fire and smoke all in EEVEE All of this is in the context of creating actual scenes that readers will work through from start to finish By the time a Blender Artist completes the book they will have created three separate works that have challenged them to iterate and design with the full power of Blender s EEVEE What you will learn Explore EEVEE Render Properties for optimal outcomes Focus on shading processes including those that are both traditional and more cutting edge Understand composition and create effective concept art inside Blender Discover procedural workflows to shorten the artistic process instead of getting mired in details Understand intermediate Blender workflows for working in a professional environment Develop art in different styles and learn why each style has different workflows and conventions Create interactive rapid changes in Blender s EEVEE engine Who this book is for This book is for 3D animators sculptors modelers and concept artists who want to use EEVEE to speed up their work in movies TV and game design Readers are expected to have a basic to intermediate level understanding of 3D programs and ray tracing engines
