Moulay Aziz-Alaoui, Cyrille Bertelle, 2009-08-07 Emergence and complexity refer to the appearance of higher level properties and behaviours of a system that obviously comes from the collective dynamics of that system s components These properties are not directly deducible from the lower level motion of that system Emergent properties are properties of the whole that

are not possessed by any of the individual parts making up that whole Such phenomena exist in various domains and can be described using complexity concepts and thematic knowledges This book highlights complexity modelling through dynamical or behavioral systems The pluridisciplinary purposes developed along the chapters are able to design links between a wide range of fundamental and applicative Sciences Developing such links instead of focusing on specific and narrow researches is characteristic of the Science of Complexity that we try to promote by this contribution Intelligent Decision Making: An AI-Based Approach Gloria Phillips-Wren, Nikhil Ichalkaranje, 2008-02-27 Intelligent Decision Support Systems have the potential to transform human decision making by combining research in artificial intelligence information technology and systems engineering The field of intelligent decision making is expanding rapidly due in part to advances in artificial intelligence and network centric environments that can deliver the technology Communication and coordination between dispersed systems can deliver just in time information real time processing collaborative environments and globally up to date information to a human decision maker At the same time artificial intelligence techniques have demonstrated that they have matured sufficiently to provide computational assistance to humans in practical applications This book includes contributions from leading researchers in the field beginning with the foundations of human decision making and the complexity of the human cognitive system Researchers contrast human and artificial intelligence survey computational intelligence present pragmatic systems and discuss future trends This book will be an invaluable resource to anyone interested in the current state of knowledge and key research gaps in the rapidly developing field of intelligent decision support Research Developments in Computer Vision and Image Processing: Methodologies and Applications Srivastava, Rajeev, 2013-09-30 Similar to the way in which computer vision and computer graphics act as the dual fields that connect image processing in modern computer science the field of image processing can be considered a crucial middle road between the vision and graphics fields Research Developments in Computer Vision and Image Processing Methodologies and Applications brings together various research methodologies and trends in emerging areas of application of computer vision and image processing This book is useful for students researchers scientists and engineers interested in the research developments of this rapidly growing field Metaheuristic Procedures for Training Neural Networks Enrique Alba, Rafael Martí, 2006-08-25 Metaheuristic Procedures For Training Neural Networks provides successful implementations of metaheuristic methods for neural network training Moreover the basic principles and fundamental ideas given in the book will allow the readers to create successful training methods on their own Apart from Chapter 1 which reviews classical training methods the chapters are divided into three main categories The first one is devoted to local search based methods including Simulated Annealing Tabu Search and Variable Neighborhood Search The second part of the book presents population based methods such as Estimation Distribution algorithms Scatter Search and Genetic Algorithms The third part covers other advanced techniques such as Ant Colony Optimization Co evolutionary methods GRASP and Memetic algorithms

Overall the book's objective is engineered to provide a broad coverage of the concepts, methods, and tools of this important area of ANNs within the realm of continuous optimization.

Evolutionary Computation and Optimization Algorithms in Software Engineering: Applications and Techniques Chis, Monica, 2010-06-30

Evolutionary Computation and Optimization Algorithms in Software Engineering: Applications and Techniques lays the foundation for the successful integration of evolutionary computation into software engineering. It surveys techniques ranging from genetic algorithms to swarm optimization theory to ant colony optimization, demonstrating their uses and capabilities. These techniques are applied to aspects of software engineering such as software testing, quality assessment, reliability assessment, and fault prediction models, among others, to providing researchers, scholars, and students with the knowledge needed to expand this burgeoning application.

Particle Swarm Optimization with Applications Pakize Erdoğmus, 2018-05-30 This book is intended to gather recent studies on particle swarm optimization (PSO). In this book, readers can find the recent theoretical developments and applications on the PSO algorithm. From the theoretical aspect, PSO has preserved its popularity because of the fast convergence rate, and a lot of hybrid algorithms have recently been developed in order to increase the performance of the algorithm. At the same time, PSO has also been used to solve different kinds of engineering optimization problems. In this book, a reader can find engineering applications of PSO such as environmental economic dispatch and grid computing.

Evolutionary Algorithms for Solving Multi-Objective Problems Carlos Coello Coello, David A. Van Veldhuizen, Gary B. Lamont, 2013-03-09 Researchers and practitioners alike are increasingly turning to search optimization and machine learning procedures based on natural selection and natural genetics to solve problems across the spectrum of human endeavor. These genetic algorithms and techniques of evolutionary computation are solving problems and inventing new hardware and software that rival human designs. The Kluwer Series on Genetic Algorithms and Evolutionary Computation publishes research monographs, edited collections, and graduate-level texts in this rapidly growing field. Primary areas of coverage include the theory, implementation, and application of genetic algorithms, GAs, evolution strategies, ESs, evolutionary programming, EP, learning classifier systems, LCSs, and other variants of genetic and evolutionary computation, GEC. The series also publishes texts in related fields such as artificial life, adaptive behavior, artificial immune systems, agent-based systems, neural computing, fuzzy systems, and quantum computing, as long as GEC techniques are part of or inspiration for the system being described. This encyclopedic volume on the use of the algorithms of genetic and evolutionary computation for the solution of multi-objective problems is a landmark addition to the literature that comes just in the nick of time. Multi-objective evolutionary algorithms (MOEAs) are receiving increasing and unprecedented attention. Researchers and practitioners are finding an irresistible match between the population available in most genetic and evolutionary algorithms and the need in multi-objective problems to approximate the Pareto trade-off curve or surface.

Artificial Intelligence in Logic Design Svetlana N. Yanushkevich, 2013-03-19 There are three outstanding points of this book. First, for the first time, a collective point

of view on the role of artificial intelligence paradigm in logic design is introduced Second the book reveals new horizons of logic design tools on the technologies of the near future Finally the contributors of the book are twenty recognizable leaders in the field from the seven research centres The chapters of the book have been carefully reviewed by equally qualified experts All contributors are experienced in practical electronic design and in teaching engineering courses Thus the book's style is accessible to graduate students practical engineers and researchers
