Morange,2000 Every day it seems the media focus on yet another new development in biology gene therapy the human genome project the creation of new varieties of animals and plants through genetic engineering These possibilities have all emanated from molecular biology A History of Molecular Biology is a complete but compact account for a general readership of the history of this revolution Michel Morange himself a molecular biologist takes us from the turn of the century convergence of molecular biology s two progenitors genetics and biochemistry to the perfection of gene splicing and cloning techniques in the 1980s Drawing on the important work of American English and French historians of science Morange describes the major discoveries the double helix messenger RNA oncogenes DNA polymerase but also explains how and why these breakthroughs took place The book is enlivened by mini biographies of the founders of molecular biology Delbr ck Watson and Crick Monod and Jacob Nirenberg This ambitious history covers the story of the transformation of biology over the last one hundred years the transformation of disciplines biochemistry genetics embryology and evolutionary biology and finally the emergence of the biotechnology industry An important contribution to the history of science A History of Molecular Biology will also be valued by general readers for its clear explanations of the theory and practice of molecular biology today Molecular biologists themselves will find Morange s historical perspective critical to an understanding of what is at stake in current biological research

A Cultural History of Heredity Staffan Müller-Wille,Hans-Jörg

Rheinberger,2020-03-04 Thought provoking any scientist interested in genetics will find this an enlightening look at the history of this field Quarterly Review of Biology It was only around 1800 that heredity began to enter debates among physicians breeders and naturalists Soon thereafter it evolved into one of the most fundamental concepts of biology Here Staffan Muller Wille and Hans Jorg Rheinberger offer a succinct cultural history of the scientific concept of heredity They outline the dramatic changes the idea has undergone since the early modern period and describe the political and technological developments that brought about these changes They begin with an account of premodern theories of generation showing that these were concerned with the procreation of individuals rather than with hereditary transmission and reveal that when hereditarian thinking first emerged it did so in a variety of cultural domains such as politics and law medicine natural history breeding and anthropology The authors then track theories of heredity from the late nineteenth century when leading biologists considered it in light of growing societal concerns with race and eugenics through the rise of classical and molecular genetics in the twentieth century to today as researchers apply sophisticated information technologies to understand heredity What we come to see from this exquisite history is why it took such a long time for heredity to become a prominent concept in the life sciences and why it gained such overwhelming importance in those sciences and the broader culture over the last two centuries

The Black Box of Biology Michel Morange,2020-06-09 In this masterful account a historian of science surveys the molecular biology revolution its origin and continuing impact Since the 1930s a molecular vision has been transforming biology Michel Morange provides an incisive and overarching history of this

transformation from the early attempts to explain organisms by the structure of their chemical components to the birth and consolidation of genetics to the latest technologies and discoveries enabled by the new science of life Morange revisits A History of Molecular Biology and offers new insights from the past twenty years into his analysis The Black Box of Biology shows that what led to the incredible transformation of biology was not a simple accumulation of new results but the molecularization of a large part of biology In fact Morange argues the greatest biological achievements of the past few decades should still be understood within the molecular paradigm What has happened is not the displacement of molecular biology by other techniques and avenues of research but rather the fusion of molecular principles and concepts with those of other disciplines including genetics physics structural chemistry and computational biology This has produced decisive changes including the discoveries of regulatory RNAs the development of massive scientific programs such as human genome sequencing and the emergence of synthetic biology systems biology and epigenetics Original persuasive and breathtaking in its scope The Black Box of Biology sets a new standard for the history of the ongoing molecular revolution

Agri food bio technology policy and regulation is transitioning from an early period focused on genetic engineering technologies to next generation rules and regulatory processes linked to challenges originating in a wide variety of new technological processes and applications Can lessons learned from past and current regulatory oversights of agricultural biotechnology and other high technology sectors help us address new and emerging regulatory challenges in the agri food genetics sector The expert contributors in this volume discuss the experiences of a wide range of North American European and Asian countries with high technology regulation to address four key questions related to the past and future development of agri food genomics regulation across the globe how unique is agri food biotechnology regulation and how can it be evaluated using the existing tools of regulatory analysis developed in examinations of other sectors is a government to governance model of regulatory regime development found in many other sectors relevant in this rapidly evolving sphere of activity is a stages model of regulatory regime development accurate And if so at which stage are we currently positioned in the regulation of agri food genomics products and technologies what drives movement between stages in different countries and sectors In assessing such drivers what are the key links between sectoral meso developments and more general macro and micro developments such as international relations and administrative behaviour By updating extending and challenging earlier empirical and theoretical social science perspectives on agricultural bio technological regulation this volume helps to inform future policy formulation It will be of interest to practitioners and students of biotechnology agriculture and science and technology policy and regulatory processes more generally

A Culture of Improvement

Robert Friedel,2010-02-26 How technological change in the West has been driven by the pursuit of improvement a history of technology from plows and printing presses to penicillin the atomic bomb and the computer Why does technology change over time how does it change and what difference does it make In this

sweeping ambitious look at a thousand years of Western experience Robert Friedel argues that technological change comes largely through the pursuit of improvement the deep rooted belief that things could be done in a better way What Friedel calls the culture of improvement is manifested every day in the ways people carry out their tasks in life from tilling fields and raising children to waging war Improvements can be ephemeral or lasting and one person's improvement may not always be viewed as such by others Friedel stresses the social processes by which we define what improvements are and decide which improvements will last and which will not These processes he emphasizes have created both winners and losers in history Friedel presents a series of narratives of Western technology that begin in the eleventh century and stretch into the twenty first Familiar figures from the history of invention are joined by others the Italian preacher who described the first eyeglasses the dairywomen displaced from their control over cheesemaking and the little known engineer who first suggested a grand tower to Gustav Eiffel Friedel traces technology from the plow and the printing press to the internal combustion engine the transistor and the space shuttle Friedel also reminds us that faith in improvement can sometimes have horrific consequences as improved weaponry makes warfare ever more deadly and the drive for improving human beings can lead to eugenics and even genocide The most comprehensive attempt to tell the story of Western technology in many years engagingly written and lavishly illustrated A Culture of Improvement documents the ways in which the drive for improvement has shaped our modern world
