The volumes of the series are published every three years in tandem with the conferences organised by the International Association of Structures and Architecture. They aim to reach a global audience of researchers, practitioners, and students, including architects, structural and construction engineers, builders, and building consultants, constructors, material suppliers, planners, urban designers, anthropologists, economists, sociologists, artists, product manufacturers, and other professionals involved in the design and realisation of architectural, structural, and infrastructural projects.

Wilken, 2014-02-07 Teletechnologies or technologies of distance cannot be ignored. Indeed the present electronic age is said to have wrought profound changes to how we think about and experience who we are where we are and how we relate with one another. Place and community have traditionally formed key concepts for thinking about these issues but what relevance do these concepts now hold for us? In this wide ranging study Wilken re-evaluates how ideas of place and community intersect with and help us make sense of a world transformed by information and communication technologies. This interdisciplinary investigation ranges across diverse textual and contextual terrain exploring approaches from media and communications architectural history and theory philosophy sociology geography literature and urban design. The rich analysis of these myriad texts reveals the complex and at times contradictory ways in which notions of place and community circulate in relation to these technologies of distance. Wilken's examination underscores both the enduring importance of ideas of place and community in the present age and the urgent need to continue to engage with think about and reconfigure these twin ideas.

Arquitectura biodigital Marcelo Fraile, 2021-06-17 La rápida e intensiva evolución que han experimentado las tecnologías biológicas y digitales a finales del siglo XX han producido importantes transformaciones en nuestros hábitos cotidianos y laborales. En el campo específico de la arquitectura se iniciaba con esto un universo de nuevos planteos que desafían las concepciones tradicionales del diseño dando lugar a una arquitectura con una expresión espacial germinal fluida en continuo proceso de cambio y de transformación hasta su concreta finalística final. Una arquitectura de modelos digitales producidas a través de una amplia gama de herramientas tecnológicas modelos paramétricos algoritmos genéticos tecnologías CAD/CAM

que permiten optimizar los recursos de un modo lógico más allá de la construcción gráfica o del discurso exclusivamente conceptual Revelando el peso de lo biológico y de lo digital en la práctica del arquitecto contemporáneo En este ámbito la presente investigación parte de la hipótesis de que un nuevo paradigma está surgiendo en el modo de concebir la arquitectura Dentro de la situación contemporánea donde los límites disciplinares parecieran ser difusos algunos afirman que la arquitectura biodigital es la nueva vanguardia otros que es una moda formalista pasajera que en muy poco tiempo será olvidada Hasta qué punto constituye dicho marco un nuevo paradigma es aún un tema sometido a debate Revolución científica o anomalía Esta dicotomía presenta un campo abierto que será objeto de esta investigación cuyos límites y consecuencias son impredecibles

ARQUITECTURA RELIGIOSA DEL SIGLO XXI EN ESPAÑA ESTEBAN FERNÁNDEZ-COBIÁN, 2022-09-23

Este libro presenta veinticuatro espacios para el culto realizados en España durante los primeros años del siglo XXI Durante las dos últimas décadas la arquitectura religiosa contemporánea ha gozado de una particular atención en nuestro país El foco se centra principalmente en los años cincuenta y sesenta del siglo XX cuando las iglesias se situaron por momentos propios en el primer plano del debate Sin embargo el periodo que siguió al Concilio Vaticano II 1962-65 todavía no ha sido estudiado en su conjunto Entre las obras seleccionadas para este volumen se encuentran veintidós iglesias católicas una iglesia evangélica y otra levemente interconfesional Es difícil saber si estos edificios son realmente significativos de la reciente arquitectura religiosa española en cualquier caso su selección responde a una elección personal del autor cuyo criterio se ha apoyado exclusivamente en valores arquitectónicos Y aunque no se hayan incluido mezquitas sinagogas o templos de religiones orientales podemos pensar que este conjunto de iglesias nos dice algo acerca de la situación actual de las religiones en España La arquitectura religiosa permite tomar el pulso de la sociedad en general ya que condensa en sí misma una serie de valores que la hacen especialmente sensible para captar las sinergias de cualquier tejido social Y esto por varios motivos por su escala singular porque apenas tiene programa y porque para mantenerla a lo largo del tiempo es necesaria la confluencia de muchas voluntades porque trabaja con grandes vacíos porque para formalizarla se requieren recursos constructivos no habituales y porque en ella la luz es el tema porque comunica y porque en definitiva aspira a ser sagrada Ahora bien Cabe hablar de edificios sagrados en la sociedad contemporánea Qué recursos utilizan los arquitectos para diseñarlos AGi architects Alejandro Beutell Chérrez y Cantera Eduardo Delgado Orusco y Javier Viver Elesio Gatón Elisa Valero Erithacus arquitectos Gimeno Guitart 1MB arquitectos OAB Office of Architecture in Barcelona Otxotorena arquitectos Pablo Guillón Pablo López Aguado Pablo Millón Rafael Moneo Rubén Labiano y Jesús Bazal Tabuenca y Leache Vicens Ramos VZ arquitectos

ARQUITECTURA SIGLO XXI Fraile Marcelo, 2022-09-23 Como diseñadores durante siglos hemos intentado humanizar el espacio de la naturaleza geometrizando a esta por la fuerza hemos cortado cepillado y desbastado todo lo natural para encasillar nuestras obras en banales

estructuras de vigas y columnas ortogonales A comienzos del siglo XXI es tiempo de dejar las ef meras discusiones del pasado y concentrar nuestras energías en el futuro Nos encontramos en los albores de una nueva Revolución un quiebre un cambio de concavidad de la curva donde el papel de lo digital y de lo biológico es predominante Los nuevos diseños deben despojarse de esa mirada nostálgica hacia el ayer para adaptarse al devenir Nuestra supervivencia como especie depende de ello En este sentido abogamos por a través de la tecnología redescubrir los complejos teoremas de la vida buscando emular la naturaleza de un modo superador crear del mismo modo en que esta lo hace Como diseñadores debemos establecer una nueva estética expresivamente superior que explorar nuevos campos del conocimiento y fragmentar por fin a la caja decimonónica fractalizándola diluirla bajo las leyes de una geometría topológica de mallas y líneas NURBS Nuevas formas nacerán ante nuestros ojos formas complejas dinámicas precisas eficaces matemáticas Formas diseñadas utilizando visores de realidad virtual y algoritmos de inteligencia artificial formas construidas mediante robot voladores provistos de inyectores que imprimirán tridimensionalmente nuestras ciudades augurándonos un futuro fantástico **Genetics Abstracts** ,1995

Toward a Living Architecture? Christina Cogdell, 2019-01-01 A bold and unprecedented look at a cutting edge movement in architecture Toward a Living Architecture is the first book length critique of the emerging field of generative architecture and its nexus with computation biology and complexity Starting from the assertion that we should take generative architects rhetoric of biology and sustainability seriously Christina Cogdell examines their claims from the standpoints of the sciences they draw on complex systems theory evolutionary theory genetics and epigenetics and synthetic biology She reveals significant disconnects while also pointing to approaches and projects with significant potential for further development Arguing that architectural design today often only masquerades as sustainable Cogdell demonstrates how the language of some cutting edge practitioners and educators can mislead students and clients into thinking they are getting something biological when they are not In a narrative that moves from the computational toward the biological and from current practice to visionary futures Cogdell uses life cycle analysis as a baseline for parsing the material energetic and pollution differences between different digital and biological design and construction approaches Contrary to green tech sustainability advocates she questions whether quartzite based silicon technologies and their reliance on rare earth metals as currently designed are sustainable for much longer challenging common projections of a computationally designed and manufactured future Moreover in critiquing contemporary architecture and science from a historical vantage point she reveals the similarities between eugenic design of the 1930s and the aims of some generative architects and engineering synthetic biologists today Each chapter addresses a current architectural school or program while also exploring a distinct aspect of the corresponding scientific language theory or practice No other book critiques generative architecture by evaluating its scientific rhetoric and disjunction from actual scientific theory and practice Based on the author's years of field research in architecture studios and biological labs this rare field building book does no less than definitively unsparingly
