Genetic Engineering Man And Nature In Transition:

Genetic Engineering Carl Heintze,1974-07-30 *Less Is More* Donna J. Baumbach,Linda L. Miller,2006-06-05

Contains practical advice for updating a school library collection describing why it is important and how to use automation tools to make the job easier *The Christian Religion and Biotechnology* George P. Smith,2005-03-21 Religion is a dominant force in the lives of many Americans It animates challenges directs and shapes as well the legal political and scientific agendas of the new Age of Biotechnology In a very real way religion biomedical technology and law are epistemologically different Yet they are equal vectors of force in defining reality and approaching an understanding of it Indeed all three share a synergetic relationship for they seek to understand and improve the human condition This book strikes a rich balance between thorough analysis in the body anchored in sound references to religion law and medical scientific analysis and a strong scholarly direction in the end notes It presents new insights into the decision making processes of the new Age of Biotechnology and shows how religion law and medical science interact in shaping directing and informing the political processes This volume will be of interest to both scholars and practitioners in the fields of religion and theology philosophy ethics family law science medicine political science and public policy and gender studies It will serve as a reference source and can be used in graduate and undergraduate courses in law medicine and religion Human Rights and Biomedicine

George P. Smith II,2021-08-04 The eight chapters within this volume are structured around an exploration of the fundamental issues in the field of biomedical human rights dignity and autonomy in not only procreative liberties but throughout the complete cycle of life and death the freedom of scientific inquiry into the new biotechnological methods of collaborative reproduction the right to genetic integrity at birth and throughout life and the equitable right to health or access to health care benefits during life and old age All these central issues are tested of necessity but utilitarian principles which in turn force the templates for decision making evaluate the gravity of harm deriving from a particular human right and its recognition and enforcement measured against the utility of the social economic or cultural good accruing from recognition of such a right in the first instance Ultimately cultural relativism will be seen more often than universality as the determinative point of balance This volume not only informs the ongoing debate on the role of human rights in biomedicine but will also provide enlightened responses to the troublesome issues presented in this new age of biotechnology

Pragmatism and Human Genetic Engineering Glenn McGee,1994 William James and John Dewey insisted that pragmatic philosophy finds meaning in its struggle to deal with emergent social problems Ironically few have attempted to use pragmatism to articulate methods for ameliorating social difficulties This dissertation attempts to do just that by putting James and Dewey s philosophy to work on the moral and scientific problems associated with genetic engineering and the Human Genome Project The intention is to demonstrate the usefulness of a pragmatic approach to applied ethics and philosophy of biology The work of proponents and critics of genetic engineering is examined including LeRoy Hood Hans

Jonas Leon Kass Robert Nozick Jeremy Rifkin Robyn Rowland and Paul Ramsey It is concluded that excessive optimism and pessimism about genetic engineering rests primarily on two errors The first basic to the Genome Project is that organisms are essentially determined by their genes and that the expression of genes is identical across human populations I draw both on Richard Lewontin and on Dewey s Logic The Theory of Inquiry to argue that the formation of human natures is instead the result of a fluid and interpenetrative relationship between hereditary information and varying environmental conditions Organisms express DNA in different ways under different circumstances and DNA itself is modified by exposure to mutagens The second error prevalent in the literature is the belief that genetic engineering is uniquely problematic requiring a new kind of ethics To counter the received view I detail numerous cases in the history of biology and philosophy in which humans have faced moral choices similar to those present in the new genetics In addition I resituate new reproductive decisions in the context of everyday problems faced by parents in society arguing that the hopes and choices of parents provide a matrix within which genetic decisions can be made I caution against the expansion of genetic diagnosis and detail some of the greatest real dangers present in positive genetic engineering Finally I suggest pragmatic alternatives to positive genetic engineering including education and health care reform

Genetic Engineering, DNA, and Cloning Joseph Menditto,Debbie Kirsch,1983 Over 8000 entries to scholarly and popular journal articles books essays government documents and newspaper items published from 1970 to the present Major indexes and databases were consulted as sources Broad arrangement by form of literature and then by topic Each entry gives bibliographical information Author index

Genetics, Ethics and the Law George Patrick Smith,1981 This book explores the legal ethical and social issues surrounding genetic engineering The Publishers Weekly ,1974 Postcolonial Ecocriticism Graham Huggan,Helen Tiffin,2015-04-17 This second edition of Postcolonial Ecocriticism a book foundational for its field has been updated to consider recent developments in the area such as environmental humanities and animal studies Graham Huggan and Helen Tiffin examine transverse relations between humans animals and the environment across a wide range of postcolonial literary texts and also address key issues such as global warming food security human over population in the context of animal extinction queer ecology and the connections between postcolonial and disability theory Considering the postcolonial first from an environmental and then a zoocritical perspective the book looks at Narratives of development in postcolonial writing Entitlement belonging and the pastoral Colonial asset stripping and the Christian mission The politics of eating and the representation of cannibalism Animality and spirituality Sentimentality and anthropomorphism The changing place of humans and animals in a posthuman world With a new preface written specifically for this edition and an annotated list of suggestions for further reading Postcolonial Ecocriticism offers a comprehensive and fully up to date introduction to a rapidly expanding field

Asma, 2003-05-01 The natural history museum is a place where the line between high and low culture effectively vanishes where our awe of nature our taste for the bizarre and our thirst for knowledge all blend happily together But as Stephen Asma shows in Stuffed Animals and Pickled Heads there is more going on in these great institutions than just smart fun Asma takes us on a wide ranging tour of natural history museums in New York and Chicago London and Paris interviewing curators scientists and exhibit designers and providing a wealth of fascinating observations We learn how the first museums were little more than high toned side shows with such garish exhibits as the pickled head of Peter the Great s lover In contrast today s museums are hot beds of serious science funding major research in such fields as anthropology and archaeology Rich in detail lucid explanation telling anecdotes and fascinating characters Asma has rendered a fascinating and credible account of how natural history museums are conceived and presented It s the kind of book that will not only engage a wide and diverse readership but it should best of all send them
