Knowledge Generation and

Technical Change Steven Wolf, David Zilberman, 2012-12-06 Knowledge generation and transfer mechanisms are being transformed in important and controversial ways Investment in research and development has increased in response to recognition that scientific productivity is tightly connected to economic dynamism Patent protection has been expanded in order to stimulate higher levels of private investment Intellectual property rights held by public organizations and researchers are now increasingly transferred to private organizations to accelerate the diffusion and enhance the value of knowledge produced by public agencies and universities Additionally new institutions such as university offices of technology transfer venture capital markets and a variety of consortia in knowledge intensive industries are being established throughout the United States and in other parts of the world These changes have led to a repositioning of the state in systems of innovation and an increase in the proprietary character of technical information The purpose of this book is to review and analyze i contemporary transitions in agricultural knowledge generation and extension arrangements from an empirical perspective and ii emerging and contradictory perspectives as to how knowledge systems can be assessed effectively The authors aim to provide the reader with a better understanding of the implications of new biotechnologies and new intellectual property rights regimes on public private relations in science the extent to which benefits from scientific knowledge are being appropriated by private sector actors the diversity and possible outcomes of privatization initiatives in extension and prospects for public goods production and ecological sustainability given contemporary trends The book presents contrasting views on the degree of complementarity and substitution between private and public sector investments in research and extension Recognizing that the labels public and private are incomplete and at times misleading descriptions of the structure and function of coordinating bodies in social systems the analyses highlight ways in which public and private spaces and modes of functioning combine In addition to illustrating a broad range of analytic methodologies useful for studying organizational questions in knowledge systems the authors identify the implications of a range of past and potential institutional innovations

Biotechnology has not stood still since 1991 when the first edition of Biotechnology The Science and the Business was published It was the first book to treat the science and business of technology as an integrated subject and was well received by both students and business professionals All chapters in this second edition have been updated and revised and some new chapters have been introduced including one on the use of molecular genetic techniques in forensic science Experts in the field discuss a range of biotechnologies including pesticides the flavor and fragrance industry oil production fermentation and protein engineering On the business side subjects include managing financing and regulation of biotechnology Some knowledge of the science behind the technologies is assumed as well as a layperson's view of buying and selling As with the first edition it is expected that this book will be of interest to biotechnology undergraduates postgraduates and those working in the industry along with students of business economics intellectual property law and communications Biodiversity and Traditional Knowledge Sarah A Laird,2010-09-23 Biodiversity research and prospecting are long standing activities taking place in a new legal and ethical environment Following entry into force of the Convention on Biological Diversity in 1993 and other recent policy developments expectations and obligations for research and prospecting partnerships have changed However to date there are few guides to integrating these concepts with practice This book offers practical guidance on how to arrive at equitable biodiversity research and prospecting partnerships Drawing on experience and lessons learned from around the world it provides case studies analysis and recommendations in a range of areas that together form a new framework for creating equity in these partnerships They include researcher codes of ethics institutional policies community research agreements the design of more effective commercial partnerships and biodiversity prospecting contracts the drafting and implementation of national access and benefit sharing laws and institutional tools for the distribution of financial benefits As part of the People and Plants initiative to enhance the role of communities in efforts to conserve biodiversity and use natural resources sustainably Biodiversity and Traditional Knowledge will be invaluable to students researchers and local communities academic institutions international agencies government bodies and companies involved in biodiversity research prospecting and conservation *The Commercialization of Genetic Research* Timothy A. Caulfield,Bryn Williams-Jones,1999-12-31 The rapid advances made in genetic research and technology over the last few decades have led to a host of important discoveries that have allowed for the detection and hopefully soon the treatment of a number of genetic conditions and diseases Not surprisingly these advances have also raised numerous ethical concerns about how resulting technologies will be implemented and the impact they will have on different communities One particular concern is the enormous costs involved in conducting genetic research and the fact that the private sector has become heavily

involved the desire to commercialize the results and technology derived from genetic research is considered problematic In September 1998 the Second International Conference on DNA Sampling titled The Commercialization of Genetic Research Ethical Legal and Policy Issues was held of the conference and of this book was to in Edmonton Alberta Canada The goal facilitate an interdisciplinary discussion of the legal ethical and policy implications arising from the commercialization of genetic research We solicited contributions for the book from authors in fields as diverse as ethics law medicine health policy and the social sciences The papers included while based on presentations given at the conference have been substantially expanded and enhanced by the commentary received and discussions held at the conference *The Emergence of Entrepreneurship Policy* David M. The United States Department of State's Biosecurity Engagement Program sponsored the workshop which was held in partnership with the Turkish Academy of Sciences. The international workshop examined biosafety and biosecurity issues related to the design, construction, maintenance, and operation of high-containment biological laboratories equivalent to United States Centers for Disease Control and Prevention biological safety level 3 or 4 labs. Although these laboratories are needed to characterize highly dangerous human and animal pathogens, assist in disease surveillance, and produce vaccines, they are complex systems with inherent risks. *Biosecurity Challenges of the Global Expansion of High-Containment Biological Laboratories* summarizes the workshop discussion which included the following topics: Technological options to meet diagnostic research and other goals; Laboratory construction and commissioning; Operational maintenance to provide sustainable capabilities; safety and security; and Measures for encouraging a culture of responsible conduct. Workshop attendees described the history and current challenges they face in their individual laboratories.
