Genetics And Ageing:

Genetics and Ageing F. A. Lints, 1978-10-10 **The Molecular Genetics of Aging** Siegfried Hekimi, 2012-12-06 The molecular genetics of aging or life span determination is an expanding field One reason is because many people would consider it desirable if human life span could be extended Indeed it is difficult not to be fascinated by tales of the life and death of people who have succeeded in living a very long life Because of this we have placed at the head of this book the chapter by Perls et al on Centenarians and the Genetics of Longevity Perls and his coauthors convincingly argue that while the average life expectancy might be mostly determined by environmental factors because the average person has an average genotype extremely long life spans are genetically determined Of course studying humans to uncover the genetics of aging is not ideal not so much because one cannot easily perform experiments as because they live such a long time This is why most of this book describes the current state of research with model organisms such as yeast worms flies and mice J aswinski focuses on yeast and how metabolic activity and stress resistance affect the longevity of *Saccharomyces cerevisiae* In the process he discusses the concept of aging as applied to a unicellular organism such as yeast and the importance of metabolism and stress resistance for aging in all organisms The Genetics of Aging Edward Schneider, 2013-11-11 The Genetics of Aging is divided into several sections in an attempt to provide a logical progression from the level of the genome to the realm of human genetics The relationship between the genetic material and aging will be thoroughly explored in the initial chapters These chapters discuss in depth the various theories that have been proposed for the mechanisms of aging at the molecular level and present data which either support or contradict these hypotheses Subsequent chapters will deal with the genetics of aging in organisms ranging from paramecium to mammals The largest section of this volume will be devoted to several important areas in human genetics human genetic disorders which feature premature aging the effect of human parental aging on the production of genetically abnormal offspring the genetics of human longevity and a review of studies on aging human twins Over the last few decades genetic technology has provided enormous insight into a number of disciplines Therefore in the last few chapters several genetic approaches to the study of aging are discussed somatic cell genetics immunogenetics and behavioral genetics As the goal of this volume is to present a comprehensive examination of the genetics of aging most chapters are oriented toward general review of their respective areas It is my hope that this volume will encourage clinical biological and behavioral investigators to turn their attention to the genetic aspects of aging as well as to employ genetic technology to obtain further insight into aging processes Genetics and Evolution of Aging Michael R. Rose, Caleb E. Finch, 2013-03-09 Aging is one of those subjects that many biologists feel is largely unknown Therefore they often feel comfortable offering extremely facile generalizations that are either unsupported or directly refuted in the experimental literature Despite this unfortunate precedent aging is a very broad phenomenon that calls out for integration beyond the mere collecting together of results from disparate laboratory organisms With this in mind Part One

offers several different synthetic perspectives The editors Rose and Finch provide a verbal synthesis of the field that deliberately attempts to look at aging from both sides the evolutionary and the molecular The articles by Charlesworth and Clark both provide population genetic perspectives on aging the former more mathematical the latter more experimental Bell takes a completely different approach arguing that aging may not be the result of evolutionary forces Bell s model instead proposes that aging could arise from the progressive deterioration of chronic host pathogen interactions This is the first detailed publication of this model It marks something of a return to the type of aging theories that predominated in the 1950 s and 1960 s theories like the somatic mutation and error catastrophe theories We hope that the reader will be interested by the contrast in views between the articles based on evolutionary theory and that of Bell MR Rose and C E Finch eds Genetics and Evolution of Aging 5 12 1994 1994 Kluwer Academic Publishers The J aniform genetics of aging 2 Michael R Rosel Caleb E

Clinical Genetics and Genomics of Aging Juan Carlos Gomez-Verjan,Nadia Alejandra Rivero-Segura,2020-04-13 The world population is rapidly aging it is estimated that by 1950 around 17% of the population will be elderly In this context aging involves several physiological psychological and highly complex social processes that vary from one person to another For a long time medical care for older adults has focused on treating chronic age related diseases and their associated consequences Recently biomedical research brings a novel point of view to develop more effective interventions by targeting the aging process itself rather than separate conditions There is a growing number of reports indicating that aging is driven by several interconnected mechanisms and biological components referred to as the molecular pillars of aging Interfering with these mechanisms could help to treat prevent and understand the development of age related diseases and associated syndromes This book provides a clinical perspective and general update on biomedical and genetic research in aging moving from an update in the molecular pillars of aging to a perspective of the most recent pharmacological clinical and diagnostic applications using genomic approaches and techniques While this book focuses on the specifics of genetics and genomics it also adopts a clinical perspective of geroscience which seeks to understand the genetic molecular and cellular mechanisms that make aging an important risk factor and sometimes a determining factor in the diseases and common chronic conditions of older people Additionally Clinical Genetics and Genomics of Aging is a significant contribution to support aging research as it shows that collaboration across disciplines is relevant to progress in the field As more and more people benefit from increased longevity clinician and researchers will be empowered by this knowledge to contribute to the progress of aging research

Longevity Genes Gil Atzmon, PhD,2015-04-27 The release of the complete version of the human genome sequence in 2003 has paved the way for defining gene function and genetic background for phenotypic variation in humans and allowed us to study the aging process in a new light This new volume results from that research and focuses on the genetic and epigenetic process of aging While the interpretation of the genome data is still in its initial stages this new volume looks at the evolving understanding of molecular mechanisms involved in cellular processes gene function associated

with complex traits epigenetic components involve in gene control and the creation of hypothesis free genome wide approaches Longevity Genes A Blueprint for Aging explores the genetic and genomic elements that can maintain a long life such as DNA damage mechanisms epigenetics and the way we can use this knowledge to generate customized treatments It touches on some of the multidisciplinary approaches as well as genomic wide association technology used to analyze complex traits This book describes the hunt for genes affecting complex traits using a high throughput technology with adequate consideration for the selection of an appropriate population applications of statistical genetics and computational biology and most importantly considering phenotype genotype association studies Longevity Genes provides coverage of not only established aspects of genetics and aging but also new approaches and perceptions in this important area of research

Lifespan David A. Sinclair, Matthew D. LaPlante, 2019-09-10 A NEW YORK TIMES BESTSELLER Brilliant and enthralling The Wall Street Journal A paradigm shifting book from an acclaimed Harvard Medical School scientist and one of Time s most influential people It s a seemingly undeniable truth that aging is inevitable But what if everything we ve been taught to believe about aging is wrong What if we could choose our lifespan In this groundbreaking book Dr David Sinclair leading world authority on genetics and longevity reveals a bold new theory for why we age As he writes Aging is a disease and that disease is treatable This eye opening and provocative work takes us to the frontlines of research that is pushing the boundaries on our perceived scientific limitations revealing incredible breakthroughs many from Dr David Sinclair s own lab at Harvard that demonstrate how we can slow down or even reverse aging The key is activating newly discovered vitality genes the descendants of an ancient genetic survival circuit that is both the cause of aging and the key to reversing it Recent experiments in genetic reprogramming suggest that in the near future we may not just be able to feel younger but actually become younger Through a page turning narrative Dr Sinclair invites you into the process of scientific discovery and reveals the emerging technologies and simple lifestyle changes such as intermittent fasting cold exposure exercising with the right intensity and eating less meat that have been shown to help us live younger and healthier for longer At once a roadmap for taking charge of our own health destiny and a bold new vision for the future of humankind Lifespan will forever change the way we think about why we age and what we can do about it **LIFESPAN** DAVID. SINCLAIR, 2020 **Aging** Cindy S.

Bergeman, 1997-04-30 Why do people age differently Research in the field of gerontology has indicated that there are large individual differences in personality cognitive functioning physical health and psychological well being as well as in the quality of life in the later years It is this variability and the reasons why people age differently that this book explores Thoughtfully written Aging presents an overview of what is known about genetic and environmental influences on aging Beginning with an overview of family adoption and twin designs author Cindy S Bergeman examines such topics as the research in the area of longevity and health cognitive functioning personality and psychopathology and social support life events and measures of the family environment The book concludes with a summary of the field of gerontological behavioral

genetics This book will stimulate discussion and future work about the origins of individual differences in later life and will be invaluable to professionals and practitioners in the fields of developmental psychology psychology aging family studies and nursing

Genes, Aging, and Immortality Charlotte Spencer, 2006 This booklet answers questions about the mysteries of aging and the search for immortality It describes some of the current progress in the scientific study of aging and explores social and ethical questions surrounding the real possibility of human lifespan extension

Biochemistry and Cell Biology of Ageing: Part II Clinical Science J. Robin Harris, Viktor I. Korolchuk, 2019-03-19 This volume of the subcellular Biochemistry series will attempt to bridge the gap between the subcellular events that are related to aging as they were described in the first volume of this set of two books and the reality of aging as this is seen in clinical practice All chapters will start from the biochemistry or cell biology where the data is available and work up towards the understanding that we have of aging in the various areas that are related to the subject Key focus points for this volume are nutrition external factors and genetics on aging There will also be chapters that will focus on various organs or tissues in which aging has been well studied like the eyes the muscles the immune system and the bones The aim of the book project and the book project that is published in concert with this volume is to bring the subcellular and clinical areas into closer contact

Redox Signaling and Biomarkers in Ageing Ufuk Çakatay, 2021-12-02 This book aims to present the age related alterations in redox signaling networks and their diagnostic biomarkers in aging cells using multidisciplinary approach Establishing sensitive and specific biomarkers of dynamic redox homeostasis is crucially important in the development of effective antiaging and senolytic interventions Recent years have seen tremendous advances in the understanding of redox signaling events which highlight the process of aging and age related pathologies A major challenge in biological aging research is developing reliable biomarkers to determine the consequences of disrupted redox signaling networks long before the clinical diagnosis of age related diseases is made Therefore we have chosen to concentrate on aging induced aberrant redox signaling networks their biomarkers and pathological consequences in this book Although oxidation is a natural metabolic process the imbalance in the level of oxidants and antioxidants causes oxidative stress and eventually leads to inflammatory conditions diabetes neurodegenerative diseases and cancer Novel redox sensitive biomarkers for the evaluation of aging induced proteinopathies such as amyloid and tau proteins in Alzheimer s disease synuclein in Parkinson s disease and islet amyloid polypeptides in type 2 diabetes mellitus recently drew the attention of researchers Inside this textbook readers will find comprehensive perspectives on the association between redox homeostasis and the aging process both at the molecular and clinical levels Due to the inherent relationship between impaired metabolic activities and oxidative stress

the temporal interaction between intermediary metabolism and disturbed redox status can lead to greater susceptibility to aging induced diseases and disorders such as cardiovascular diseases hypertension and diabetes This knowledge could be a key to continued research toward improving medication regimens such as in cancer and cardiovascular therapies and procedural outcomes for patients This book brings together current research evidence and knowledge on redox signaling and biomarkers in aging in chapters written by leading global experts in this rapidly evolving field We hope that this textbook is of interest to a wide group of researchers advanced students scientifically curious non specialist readers and clinicians alike
