Environmental Archaeology: Meaning and Purpose Umberto Albarella, 2013-04-17 Despite the fact that the human life of the past cannot be understood without taking into account its ecological relationships environmental studies are often marginalised in archaeology This is the first book that by discussing the meaning and purpose we give to the expression environmental archaeology investigates the reasons for such a problem This is achieved through the use of theoretical considerations and the aid of a number of case studies which by taking us from Anglo Saxon England to pre Columbian Venezuela and from Classical Greece to late Antique Egypt emphasise the potential of an integrated approach The book is written by archaeologists with different backgrounds and is addressed to all researchers who care about the past relationship between people and the rest of Nature Despite the complexity of some of the issues tackled the book is written in an accessible manner and should be of interest to all students who want to understand the essence of archaeology beyond the boundary of the individual sub disciplines

artifact conservation and laboratory safety Part II offers brief surveys of the analysis of lithics and ground stone pottery metal artifacts bone and shell artifacts animal and plant remains and sediments as well as dating by stratigraphy seriation and chronometric methods It concludes with a chapter on archaeological illustration and publication A new feature of the book is illustration of concepts through case studies from around the world and from the Palaeolithic to historical archaeology The text is appropriate for senior undergraduate students and will also serve as a useful reference for graduate students and professional archaeologists

The Geohistorical Approach Silvia Elena Piovan, 2020-05-14 This book gives a comprehensive view of the strengths and limits of the interdisciplinary methods that work together to form the geohistorical approach to geographical and geological sciences The geohistorical approach can be synthetically defined as a multi and interdisciplinary approach that uses techniques and perspectives mainly from geography history and natural sciences to examine topics that inform the space time knowledge of environment territory and landscape The boundary between the application of physical and human science methods is large and hazy This volume exists at this boundary and offers an approach that utilizes both historical data from both physical and human records and GIScience e g GIS cartography GPS remote sensing to investigate the evolution of the environment territory and landscape through both space and time The first objective of this volume is to define the term geohistorical approach An entire chapter focuses on a review of the main disciplines that connect geography and history a review of the terms environment territory and landscape as objects of study of this approach and the definition and importance of the geohistorical approach The second goal is to describe the methods used in the geohistorical approach Eight chapters present the key methods also using examples of applications from the international context offering an awareness of the potentials limitations and accuracy of each method with particular focus on the integration of methods The third goal is to provide case studies to demonstrate the use and integration of geohistorical methods from both original material and published research A final chapter is dedicated to an interdisciplinary case study from the Venetian Plain Italy providing an example of the integration of almost all methods described in the book

Handbook of Pleistocene Archaeology of Africa Amanuel Beyin, David K. Wright, Jayne Wilkins, Deborah I. Olszewski, 2023-08-17 This handbook showcases an Africa wide compendium of Stone Age archaeological sites and methodological advances that have improved our understanding of hominin lifeways and biogeography in the continent The focal time spans the Pleistocene Epoch c 2 5 million 11 700 years ago during which important human traits such as obligate bipedalism that freed the hands to engage in creative activities a large brain relative to body size language and social complexity developed in the general forms that they are found today The handbook is the first of its kind and it is expected to play a significant role in human evolutionary research by Collating the African Stone Age record which exists in a fragmented state along the lines of national boundaries and colonial experiences Showcasing emerging conceptual and methodological advances in African Pleistocene archaeology Providing reference datasets for teaching and researching African prehistory

Making Africa's Stone Age record accessible to researchers and students based in Africa who may not have access to journal publications where most new field discoveries are published. The Handbook features 128 chapters of which 116 are site entries grouped by the host countries and presented in an alphabetical order. A number of those site-related entries examine multiple archaeological localities lumped under specific projects or study areas. The rest of the contributions deal with methodological topics such as luminescence and radiocarbon dating, field data recovery, lithic analysis, micromorphology and hominin fossil and zooarchaeological records of Pleistocene Africa. The introductory chapter provides an historical overview of the development of Stone Age/Paleolithic archaeology in Africa beginning in the mid 19th century and paleoenvironmental and chronological frameworks commonly used to structure the continent's Pleistocene record. By making a good amount of African Stone Age literature accessible to researchers and the public, we wish to promote interest in human evolutionary research in the continent and elsewhere. Awarded the 2025 The Best Book Award by The Society of Africanist Archaeologists.

Digital Geoarchaeology Christoph Siart, Markus Forbriger, Olaf Bubbenzer, 2017-12-03. This book focusses on new technologies and multi-method research designs in the field of modern archaeology which increasingly crosses academic boundaries to investigate past human environmental relationships and to reconstruct palaeolandscapes. It aims at establishing the concept of Digital Geoarchaeology as a novel approach of interdisciplinary collaboration situated at the scientific interface between classical studies, geosciences and computer sciences. Among others, the book includes topics such as geographic information systems, spatiotemporal analysis, remote sensing applications, laser scanning, digital elevation models, geophysical prospecting, data fusion and 3D visualisation, categorized in four major sections. Each section is introduced by a general thematic overview and followed by case studies which vividly illustrate the broad spectrum of potential applications and new research designs. Mutual fields of work and common technologies are identified and discussed from different scholarly perspectives. By stimulating knowledge transfer and fostering interdisciplinary collaboration, Digital Geoarchaeology helps generate valuable synergies and contributes to a better understanding of ancient landscapes along with their forming processes. Chapters 1, 2, 6, 8 and 14 are published open access under a CC BY 4.0 license at link.springer.com.

Landscape Archaeology between Art and Science Sjoerd Kluiving, Erika Guttman-Bond, 2025-10-01. Researchers in landscape archaeology use two different definitions of landscape. One definition, landscape as territory, is used by the processual archaeologists, earth scientists and most historical geographers within this volume. By contrast, post-processual archaeologists, new cultural geographers and anthropologists favour a more abstract definition of landscape based on how it is perceived by the observer. Both definitions are addressed in this book with 35 papers that are presented here and that are divided into six themes: 1. How did landscape change? 2.

Improving temporal chronological and transformational frameworks 3 Linking landscapes of lowlands with mountainous areas 4 Applying concepts of scale 5 New directions in digital prospection and modelling techniques and 6 How will landscape archaeology develop in the future This volume demonstrates a worldwide interest in landscape archaeology and the research presented here draws upon and integrates the humanities and sciences This interdisciplinary approach is rapidly gaining support in new regions where such collaborations were previously uncommon **Boom and Bust in**

intention is to present a basic handbook of good practice with case studies and examples that any archaeologist or aspiring geoarchaeologist can use

Soils in Archaeological Research Vance T. Holliday, 2004-08-19 Soils invaluable indicators of the nature and history of the physical and human landscape have strongly influenced the cultural record left to archaeologists Not only are they primary reservoirs for artifacts they often encase entire sites And soil forming processes in themselves are an important component of site formation influencing which artifacts features and environmental indicators floral faunal and geological will be destroyed and to what extent and which will be preserved and how well In this book Holliday will address each of these issues in terms of fundamentals as well as in field case histories from all over the world The focus will be on principles of soil geomorphology soil stratigraphy and soil chemistry and their applications in archaeological research
