S. Saklani, 2005 Contributed articles **Tectonics of the Himalaya** S. Mukherjee, R. Carosi, P.A. van der Beek, B.K. Mukherjee, D.M. Robinson, 2015-09-28 The Himalayan mountain belt which developed during the India Asia collision starting about 55 Ma ago is a dramatically active orogen and it is regarded as the classic collisional orogen. It is characterized by an impressively continuous 2500 km of tectonic units, thrusts and normal faults as well as large volumes of high grade metamorphic rocks and granites exposed at the surface. This constitutes an invaluable field laboratory where amazing crustal sections can be observed directly in very deep gorges. It is possible to unravel the tectonic and metamorphic evolution of litho units to observe the mechanisms of exhumation of deep seated rocks and the propagation of the deformation. Himalayan tectonics has been the target of many studies from numerous international researchers over the years. In the last 15 years there has been an explosion of data and theories from both geological and geophysical perspectives. This book presents the results of integrated multidisciplinary studies including geology, petrology, magmatism, geochemistry, geochronology and geophysics of the structures and processes affecting the continental lithosphere. These processes and their spatial and temporal evolution have major consequences on the geometry and kinematics of the India Eurasia collision zone.

Himalaya Khadg Singh Valdiya, 2001 Written For Those Who Are Not Familiar With Geological Jargon But Still Want To Know About The Amazing And Spectacular Mountain That Towers Over Our Nation. It Provides A Broad But Brief And Updated Coverage Of The History Of The Birth And The Development Of The Himalayas. It Is A Simplified Synthesis Of Geomorphological, Geological And Geophysical Data Leading To The Emergence And Rise Of The World S Highest But Youngest Mountain Presented In The Context Of The Wider Panorama Of The Evolution Of The Indian Subcontinent. The Book Highlights The Crucial Developments That Overtook The Northward Moving Land Mass Of India *Colliding Continents* M. P. Searle, 2013-03-28 Gargantuan geological forces created the spectacular mountain ranges of the Himalaya and Karakoram. Mike Searle, one of the world's most experienced field geologists, tells the scientific story illustrating it with his own

photographs and accounts of his mountaineering and research in the region Himalayan Tectonics P.J. Treloar, M.P. Searle, 2019-10-08 The Himalaya Karakoram Tibet mountain belt resulted from Cenozoic collision of India and Asia and is frequently used as the type example of a continental collision orogenic belt The last quarter of a century has seen the publication of a remarkably detailed dataset relevant to the evolution of this belt Detailed fieldwork backed up by state of the art structural analysis geochemistry mineral chemistry igneous and metamorphic petrology isotope chemistry sedimentology and geophysics produced a wide ranging archive of data rich scientific papers The rationale for this book is to provide a coherent overview of these datasets in addressing the evolution of the mountain ranges we see today This volume comprises 21 specially invited review papers on the Himalaya Kohistan arc Tibet the Karakoram and Pamir ranges These papers span the history of Himalayan research chronology of the collision stratigraphy magmatic and metamorphic processes structural geology and tectonics seismicity geophysics and the evolution of the Indian monsoon This landmark set of papers should underpin the next 25 years of Himalayan research **Geology of Western Himalaya** V. C. Thakur, 1992 Hardbound During the past two decades the pace of geological work in the Himalayas has considerably increased Of the different sectors the Western Himalaya has been studied more extensively than the other parts A fairly good amount of data on different aspects viz stratigraphy sedimentology geochemistry geochronology and structure has been generated from different tectonic zones of Western Himalaya This book compiles and synthesizes the post 1964 data of the Western Himalaya The geology of Western Himalaya is described under a tectonic zone framework and wherever necessary different regions are discussed separately under each tectonic zone A geological map of the Western Himalaya has been compiled on 1:1 000 000 scale
