Geograficheskii Atlas Mira:

Mapping Europe's Borderlands Steven Seegel, 2012-05-14 The simplest purpose of a map is a rational one to educate to solve a problem to point someone in the right direction Maps shape and communicate information for the sake of improved orientation But maps exist for states as well as individuals and they need to be interpreted as expressions of power and knowledge as Steven Seegel makes clear in his impressive and important new book Mapping Europe's Borderlands takes the familiar problems of state and nation building in eastern Europe and presents them through an entirely new prism that of cartography and cartographers Drawing from sources in eleven languages including military historical pedagogical and ethnographic maps as well as geographic texts and related cartographic literature Seegel explores the role of maps and mapmakers in the East Central European borderlands from the Enlightenment to the Treaty of Versailles For example Seegel explains how Russia used cartography in the aftermath of the Napoleonic Wars and later formed its geography society as a cover for gathering intelligence He also explains the importance of maps to the formation of identities and institutions in Poland Ukraine and Lithuania as well as in Russia Seegel concludes with a consideration of the impact of cartographers regional and socioeconomic backgrounds educations families career options and available language choices **The Earth as Transformed by Human Action** B. L. Turner, William C. Clark, Robert W. Kates, John F. Richards, Jessica T.

Mathews, William B. Meyer, 1993-01-29 The Earth as Transformed by Human Action is the culmination of a mammoth undertaking involving the examination of the toll our continual strides forward technical and social take on our world The purpose of such a study is to document the changes in the biosphere that have taken place over the last 300 years to contrast global patterns of change to those appearing on a regional level and to explain the major human forces that have driven these changes The first section deals strictly with the major human forces of the past 300 years and the second is a detailed account of the transformations of the global environment wrought by human action The final section examines a range of perspectives and theories that purport to explain human actions with regard to the biosphere *Hydrocarbons in the Ocean*

Edward P. Myers, Charles G. Gunnerson, 1976 **Selected Aspects of Geology and Physiography of the Cold Regions** S. Russell Stearns, 1965 The purpose of this work is to provide those contemplating scientific or engineering activities in cold regions with a general picture of their geology and physiography The cold regions are the Arctic Alaska Canadian Arctic and subarctic Greenland Iceland Jan Mayen Svalbard Scandinavia U S S R and the Antarctica **Glaciers, Sea Ice, and Ice Formation** John P. Rafferty Associate Editor, Earth Sciences, 2010-08-15 Explores the frozen tundra of the Arctic and Antarctic as the complexities of water are revealed *Sea-Ice and Iceberg Sedimentation in the Ocean* Alexander P. Lisitzin, 2012-12-06 In many geological epochs glacial sediments are widespread This type of sedimentation results from the interaction between atmosphere cryosphere hydrosphere and biosphere under temperatures ranging from 0 to 80 Two types of glacial sediments exist those from sea ice and those from icebergs Both types can be subdivided into various subfacies

Most widespread in the Northern Hemisphere is the Siberian subfacies characterized by silt and clay and often misinterpreted as sediments of temperate zones This reference book for researchers working on this kind of sediments provides a complete overview of the various glacial deposits in the ocean **Global Ecosystems Database, Version 1.0 (on CD-ROM)** John J. Kineman,1992 **Ecosystem Geography** Robert G. Bailey,2014-07-08 and management is presently undergoing enormous change away from managing single resources to managing ecosystems From forest to tundra to desert to steppe the world's ecosystems vary vastly To manage them effectively we need to understand their geographic distribution better We need to do this at various levels of detail because ecosystems exist at multiple scales in a hierarchy from regional to local Maps are needed to display ecosystem distribution and hierarchy Until now information on defining ecosystem boundaries has been scarce This book is the first to clarify and systematize the underlying principles for their mapping It presents a synthesis of the knowledge in this field and provides a guide to its use I recommend this book to all who are involved in the study and management of ecosystems Chief USDA Forest Service Jack Ward Thomas v Preface to the Second Edition his book outlines a system that organizes the Earth into a hierarchy of increasingly finer scale ecosystems that can serve as a consistent framework for ecological analysis and management The system consists of a three level hierarchy of nested ecosystem units and their associated mapping criteria Delineation of units involves identifying the environmental factors controlling the spatial geography of ecosystems at various levels and establishing boundaries where these factors change significantly Macroscale units ecoregions are climatically controlled and delineated as Köppen Trewartha climate zones

Catalog of the United States Geological Survey Library U.S. Geological Survey Library,1972 **Ecoregions** Robert G. Bailey,2014-04-03 Global warming and human driven impacts are changing the World's ecological zones This book applies the principles described in Bailey's Ecosystem Geography From Ecoregions to Sites 2nd ed Springer 2009 1st ed 1996 to describe and characterize the major terrestrial and aquatic ecological zones of the Earth Bailey's system for classifying these zones has been adopted by major organizations such as the U S Forest Service and The Nature Conservancy and this book is a significant contribution to a long tradition of classifying and studying the world's ecological regions or ecoregions It includes two color maps that show the major ecoregions of the continents and oceans Also included are 106 illustrations with 55 in full color A new chapter on mountains is included There are new sections that address concerns about how ecoregions are changing under the relentless influence of humans and climate change Another new feature is the discussion of using ecoregional patterns to transfer research results and select sites for detecting climate change effects on ecosystem distribution Use of ecoregional patterns to design monitoring networks and sustainable landscapes Fire regimes in different regional ecosystems and their management implications **Staff Information Bulletin** Library of Congress,1965 OTS. Understanding the ebb and flow of materials on the earth s surface is vital to comprehending environmental change We need to differentiate between those that represent a progression of natural events from those that might be human induced The latter can be managed by changing policies the former probably cannot This volume presents what researchers know and do not know about the base or natural level of surficial fluxes and their dynamics Leading experts in the field offer a historical perspective on geofluxes and discuss the cycles of materials on the earth s surface from weathering processes to the movement of material through the river system and oceans to their deposition The committee sets research directions in five areas shallow water studies mapping rates of change sample dating and most critical understanding whether human influence can exceed the natural variability in geoflux processes This volume will be important reading for geophysical scientists researchers faculty and students as well as environmental policymakers Hearings, Reports and Prints of the Joint Economic Committee United States.
