Geographical Data Acquisition:

Geographical Data Acquisition Yong-Qi Chen, Yuk-Cheung Lee, 2012-12-06 This book presents the theory and methodology of geographical data acquisition providing comprehensive coverage ranging from the definition of geo referencing systems and transformation between these systems to the acquisition of geographical data using different methods The material provides readers with a good understanding of the nature of spatial data the accuracy of spatial data and the theory behind various data acquisition methodologies

Data Acquisition and Analysis for Multimedia GIS L. Mussio, G. Forlani, F. Crosilla, 2014-05-04 The book contains 31 papers on different fields of application and the problems of modelling and organizing data in structures the processing techniques of GIS data for queries to the system and the so called Dynamic GIS have been reported in detail A final paper on Computer Graphics principles is included Its contents can be ideally collected in five chapters in the first one some experiences on data acquisition with low cost DGPS for road survey and overview on Vehicle Navigation Systems VNS are shown The second on GIS data acquisition and evaluation collects a sort of papers treating robust statistical techniques applied to pre processing analysis and testing for different kinds of GIS data Within the topic on image acquisition and preprocessing in particular some experiences on test and calibration of different scanners for GIS data acquisition are reported as well as some original approaches to the automatic DTM generation for cartographic and close range applications Finally some applications to the environmental monitoring and to the use of different kinds of geodetic data in multipurpose regional GIS together with some examples of the applicability of multimedia technology to architecture and civil engineering is shown

Geographical Information Systems in Hydrology V.P. Singh, M. Fiorentino, 2013-03-09 The last few years have witnessed an enormous interest in application of GIS in hydrology and water resources This is partly evidenced by organization of several national and international symposia or conferences under the sponsorship of various professional organizations This increased interest is in a large measure in response to growing public sensitivity to environmental quality and management The GIS technology has the ability to capture store manipulate analyze and visualize the diverse sets of geo referenced data On the other hand hydrology is inherently spatial and distributed hydrologic models have large data requirements The integration of hydrology and GIS is therefore quite natural The integration involves three major components 1 spatial data construction 2 integration of spatial model layers and 3 GIS and model interface GIS can assist in design calibration modification and comparison of models This integration is spreading worldwide and is expected to accelerate in the foreseeable future Substantial opportunities exist in integration of GIS and hydrology We believe there are enough challenges in use of GIS for conceptualizing and modeling complex hydrologic processes and for globalization of hydrology The motivation for this book grew out of the desire to provide under one cover a range of applications of GIS technology in hydrology It is hoped that the book will stimulate others to write more comprehensive texts on this subject of growing importance
