Wright, Darius J. Barlett, 1999-12-23 Marine and coastal applications of GIS are finally gaining wide acceptance in scientific as well as GIS communities and cover the fields of deep sea geology chemistry and biology and coastal geology biology engineering and resource management

Comprising rigorous contributions from a group of leading scholars in marine and coastal GIS this book will inspire and stimulate continued research in this important new application domain Launched as a project to mark the UN International Year of the Ocean 1998 and supported by the International Geographical Union's Commission on Coastal Systems this book covers progress and research in the marine and coastal realms in the areas of theory applications and empirical results It is the first book of its kind to address basic and applied scientific problems in deep sea and coastal science using GIS and remote sensing technologies It is designed for GIS and remote sensing specialists but also for those with an interest in oceans lakes and shores Coverage ranges from seafloor spreading centres to Exclusive Economic Zones to microscale coastal habitats and techniques include submersibles computer modelling image display 3 D temporal data visualization and development and application of new algorithms and spatial data structures It illustrates the broad usage of GIS image processing and computer modelling in deep sea and coastal environments and also addresses important institutional issues arising out of the use of these technologies

Handbook, 1994 Item no 0431 K Introduction To Geographical Information Systems Prithvish Nag And Smita Sengupta, Prithvish Nag, 2008 In Indian context Life and Motion of Socio-Economic Units Andrew Frank, Jonathan Raper, J. P. Cheylan, 2003-09-02 One of the ongoing problems researchers in geography and GIS have is studying data that is inherently spatial over a long period of time One of the main hurdles they have to overcome is the study of groups of people classified by their socio economic status one of the main means for governments companies and research organisations to group together segments of the population The amount of data collected by governments business and research organisations has increased markedly in recent years Geographic Information Systems have been more widely used than ever before for the storage and analysis of this information Most GIS can handle this information spatially rather than temporally and have difficulty with the management of socio economic time series which relate to spatial units Accordingly this book covers the issues ranging from the formal model to differentiate aspects of spatio temporal data through philosophical and fundamental reconsideration of time and space to the development of practical solutions to the problem This book draws together an interdisciplinary group of scientists in the field of geography computing surveying and philosophy It presents the definitive sourcebook on temporal GIS as applied to socio economic units

An Introduction to Geographical Information Systems D. Ian Heywood, Sarah Cornelius, Steve Carver, 1998 This introductory text to the world of geographical information systems is aimed at students at all levels from undergraduates to professionals retraining in GIS

Geographical Information Systems and Computer Cartography Chris B. Jones, 2014-05-01 A concise text presenting the fundamental concepts in Geographical Information Systems GIS emphasising an understanding of techniques in management analysis and graphic display of spatial information Divided into five parts the first part reviews the development and application of GIS followed by a summary of the characteristics and representation of geographical information It concludes with an overview of the functions provided by typical GIS systems

Part Two introduces co ordinate systems and map projections describes methods for digitising map data and gives an overview of remote sensing Part Three deals with data storage and database management as well as specialised techniques for accessing spatial data Spatial modelling and analytical techniques for decision making form the subject of Part Four while the final part is concerned with graphical representation emphasising issues of graphics technology cartographic design and map generalisation

Geographic Objects with Indeterminate Boundaries Peter A. Burrough, A. Frank, 2020-11-25 Current geographical information systems GIS deal almost exclusively with well defined static geographical objects ranging from physical landscapes to towns and transport systems Such objects exactly located in space can easily be handled by modern GIS yet form only a small proportion of all the possible geographical objects This book challenges the assumption that the world is compsed of exactly defined and bounded geographic objects such as land parcels rivers and countries ignoring the essential complexity of the world current GIS do not adequately address problems as diverse as the resolution of crime between national boundaries or the interpretation of views of people from different cultures This work bringing together a range of specialists from fields such as linguistics computer science land surveying cartography and soil science examines current research into the challenges of dealing with geographical phenomena that cannot easily be forced into one of the two current standard data models *City Competitiveness and Improving Urban Subsystems: Technologies and Applications*

Bulu, Melih, 2011-10-31 Cities are becoming the wealth producing centers of national economies Increasing the operational efficiency of the city will bring a competitive edge to the whole system Yet many city subsystems cannot work together creating significant problems and inefficiencies City Competitiveness and Improving Urban Subsystems Technologies and Applications uses information science perspectives to improve working subsystems in transportation sewage electricity water communication education health governance and infrastructure since their efficient and synchronized operation is vital for a competitive city This pioneering approach will interest researchers professionals and policymakers in urban economy regional planning and information science disciplines who wish to improve the competitiveness of their cities

Geographical Information Systems in Hydrology V.P. Singh, M. Fiorentino, 2013-03-09 The last few years have witnessed

an enormous interest in application of GIS in hydrology and water resources This is partly evidenced by organization of several national and international symposia or conferences under the sponsorship of various professional organizations This increased interest is in a large measure in response to growing public sensitivity to environmental quality and management The GIS technology has the ability to capture store manipulate analyze and visualize the diverse sets of geo referenced data On the other hand hydrology is inherently spatial and distributed hydrologic models have large data requirements The integration of hydrology and GIS is therefore quite natural The integration involves three major components 1 spatial data construction 2 integration of spatial model layers and 3 GIS and model interface GIS can assist in design calibration modification and comparison of models This integration is spreading worldwide and is expected to accelerate in the foreseeable future Substantial opportunities exist in integration of GIS and hydrology We believe there are enough challenges in use of GIS for conceptualizing and modeling complex hydrologic processes and for globalization of hydrology The motivation for this book grew out of the desire to provide under one cover a range of applications of GIS technology in hydrology It is hoped that the book will stimulate others to write more comprehensive texts on this subject of growing importance

Encyclopedia of Geographic Information Science Karen Kemp, 2008 Geographic information science GIScience is an emerging field that combines aspects of many different disciplines Spatial literacy is rapidly becoming recognized as a new essential pier of basic education alongside grammatical logical and mathematical literacy By incorporating location as an essential but often overlooked characteristic of what we seek to understand in the natural and built environment geographic information science GIScience and systems GISystems provide the conceptual foundation and tools to explore this new frontier The Encyclopedia of Geographic Information Science covers the essence of this exciting new and expanding field in an easily understood but richly detailed style In addition to contributions from some of the best recognized scholars in GIScience this volume contains contributions from experts in GIS supporting disciplines who explore how their disciplinary perspectives are expanded within the context of GIScience what changes when consideration of location is added what complexities in analytical procedures are added when we consider objects in 2 3 or even 4 dimensions what can we gain by visualizing our analytical results on a map or 3D display Key Features Brings together GIScience literature that is spread widely across the academic spectrum Offers details about the key foundations of GIScience no matter what their disciplinary origins Elucidates vocabulary that is an amalgam of all of these fields Key Themes Conceptual Foundations Cartography and Visualization Design Aspects Data Manipulation Data Modeling Geocomputation Geospatial Data Societal Issues Spatial Analysis Organizational and Institutional Aspects The Encyclopedia of Geographic Information Science is an important resource for academic and corporate libraries
