Geological Disposal Of Radioactive Waste Review Of Developments In The Last Decade:

Geological Disposal of Radioactive Waste OECD Nuclear Energy Agency, 1999 This report is a review of developments in geological disposal of radioactive waste in the past decade The primary sources of information are the answers to a questionnaire provided by waste management organisations represented in the NEA Radioactive Waste Management Committee RWMC

Deep Geological Disposal of Radioactive Waste W. R. Alexander, Linda McKinley, 2011-07-29 Deep Geological Disposal of Radioactive Waste presents a critical review of designing siting constructing and demonstrating the safety and environmental impact of deep repositories for radioactive wastes It is structured to provide a broad perspective of this multi faceted multi disciplinary topic providing enough detail for a non specialist to understand the fundamental principles involved and with extensive references to sources of more detailed information Emphasis is very much on deep geological disposal at least some tens of metres below land surface and in many cases many hundred of metres deep Additionally only radioactive wastes are considered directly even though such wastes often contain also significant chemotoxic or otherwise hazardous components Many of the principles involved are generally applicable to other repository options e g near surface or on surface disposal and indeed to other types of hazardous waste Presents a current critical review in designing siting constructing and demonsrating the safety and environmental impact of deep repositories for radwaste Addresses the fundamental principles of radioactive waste with up to date examples and real world case studies Written for a multi disciplinary audience with an appropriate level of detail to allow a non specialist to understand

Disposition of High-Level Radioactive Waste Through Geological Isolation National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Board on Radioactive Waste Management, 1999-11-07 During the next several years decisions are expected to be made in several countries on the further development and implementation of the geological disposition option The Board on Radioactive Waste Management BRWM of the U S National Academies believes that informed and reasoned discussion of relevant scientific engineering and social issues can and should play a constructive role in the decision process by providing information to decision makers on relevant technical and policy issues A BRWM initiated project including a workshop at Irvine California on November 4 5 1999 and subsequent National Academies report to be published in spring 2000 are intended to provide such information to national policy makers both in the U S and abroad To inform national policies it is essential that experts from the physical geological and engineering sciences and experts from the policy and social science communities work together Some national programs have involved social science and policy experts from the beginning while other programs have only recently recognized the importance of this collaboration An important goal of the November workshop is to facilitate dialogue between these communities as well as to encourage the sharing of experiences from many national programs The workshop steering committee has prepared this discussion for participants at the workshop It should elicit critical comments

and help identify topics requiring in depth discussion at the workshop It is not intended as a statement of findings conclusions or recommendations It is rather intended as a vehicle for stimulating dialogue among the workshop participants Out of that dialogue will emerge the findings conclusions and recommendations of the National Academies report *The Future of Radioactive Waste Governance* Maarten Arentsen,Rinie van Est,2023-04-06 This Open Access book examines the radioactive waste management policies of ten European countries Belgium Finland France Germany Italy the Netherlands Spain Sweden Switzerland and the United Kingdom Most countries are in the process of planning and creating final storage solutions while none has yet finalized this process Over the past decades many countries have been renewing their decision making processes and the institutions that support them The book provides 16 lessons that may advance the future democratic decision making process around radioactive waste management Disposition of High-Level Waste and Spent Nuclear Fuel National Research Council,Division on Earth and Life Studies,Board on Radioactive Waste Management,Committee on Disposition of High-Level Radioactive Waste Through Geological Isolation,2001-06-05 Focused attention by world leaders is needed to address the substantial challenges posed by disposal of spent nuclear fuel from reactors and high level radioactive waste from processing such fuel The biggest challenges in achieving safe and secure storage and permanent waste disposal are societal although technical challenges remain Disposition of radioactive wastes in a deep geological repository is a sound approach as long as it progresses through a stepwise decision making process that takes advantage of technical advances public participation and international cooperation Written for concerned citizens as well as policymakers this book was sponsored by the U S Department of Energy U S Nuclear Regulatory Commission and waste management organizations in eight other countries Progress Towards Geologic Disposal of Radioactive Waste ,1999 *Principles and Standards for the Disposal of Long-lived Radioactive Wastes* N. Chapman,C. McCombie,2003-10-07 This handbook is concerned with developing principles and standards for the safe disposal of solid radioactive wastes by burial deep in the Earth s crust Radioactive wastes have focussed thinking on long term environmental protection issues in an unprecedented way Consequently the way in which principles and standards are set and the thinking behind this is of wider interest than to the nuclear field alone The issues are not just technical and scientific There is also a much wider philosophical context to the debate centering on ethics human values and the expectations of society In this handbook it is intended that all these issues are brought together suggesting appropriate ways forward in each area culminating in a proposed structure for safety regulations It also aims to provide a detailed discussion of some of the most difficult logical and ethical issues facing those wishing to dispose of long lived radioactive wastes **Geologic Disposal of Radioactive Waste in Perspective** OECD Nuclear Energy Agency,2000 This report reviews the progress to date in geological disposal of radioactive waste and the further steps that may be required to implement geologic disposal taking into account both the technical and regulatory requirements and the need to achieve an appropriate level of societal acceptance **Decision**

Making for Complex Socio-Technical Systems Thomas Flüeler, 2006-03-08 Waste management can be considered as a mirror of society In its our fluctuating definition besides conserving a supply of valuable materials and resources it acts as a fascinating expression for our throw away mentality Waste is inevitable but it nevertheless provides an opportunity a need and an incentive for society to pursue a more careful management of it If this is successfully carried out society may well find it possible to manage itself in an overall more careful and universal way The management or governance of radioactive waste particularly is determined by a complex constellation of individuals social aggregates and institutions A wealth of interconnected parts forms a complex and volatile system that is highly technical and explosively political in nature The problems inherent in this system must be managed so as to reach a safe acceptable responsible feasible and sustainable solution It is a system with an objective long term dimension with a hazard potential of in part hundreds of thousands of years and it has a long term institutional dimension insofar as its implementation must last for decades The very notion of risk extends from the long life of radionuclides over the perception of dread to the decisional risk of whether when and how to implement an agreed upon solution

Design Principles and Approaches for Radioactive Waste Repositories

IAEA, 2020-12-10 A considerable level of international experience has been gained over the last decades in designing radioactive waste disposal facilities This publication is intended to assist Member States in planning for the disposal of radioactive waste Specifically this publication describes the approaches and principles to be considered by the responsible organizations within a Member State involved in the planning and design of radioactive waste disposal facilities Examples are provided for all waste classes requiring disposal The examples are based on successfully implemented designs or on design concepts that are sufficiently advanced to demonstrate their overall feasibility for the safe disposal of radioactive waste Alternate disposal options are also discussed describing solutions that rely on the conversion of existing facilities such as mines or other underground openings as well as the potential for disposal in boreholes

Rock Mechanics and Engineering Volume 5 Xia-Ting Feng, 2017-07-20 Surface and Underground Projects is the last volume of the five volume set Rock Mechanics and Engineering and contains twenty one chapters from key experts in the following fields Slopes Tunnels and Caverns Mining Petroleum Engineering Thermo Hydro Mechanics in Gas Storage Loading and Radioactive Waste Disposal The five volume set Comprehensive Rock Engineering which was published in 1993 has had an important influence on the development of rock mechanics and rock engineering Significant and extensive advances and achievements in these fields over the last 20 years now justify the publishing of a comparable new compilation Rock Mechanics and Engineering represents a highly prestigious multi volume work edited by Professor Xia Ting Feng with the editorial advice of Professor John A Hudson This new compilation offers an extremely wideranging and comprehensive overview of the state of the art in rock mechanics and rock engineering and is composed of peer reviewed dedicated contributions by all the key experts worldwide Key features of this set are that it provides a systematic global summary of new developments in rock mechanics

and rock engineering practices as well as looking ahead to future developments in the fields Contributors are worldrenowned experts in the fields of rock mechanics and rock engineering though younger talented researchers have also been included The individual volumes cover an extremely wide array of topics grouped under five overarching themes Principles Vol 1 Laboratory and Field Testing Vol 2 Analysis Modelling and Design Vol 3 Excavation Support and Monitoring Vol 4 and Surface and Underground Projects Vol 5 This multi volume work sets a new standard for rock mechanics and engineering compendia and will be the go to resource for all engineering professionals and academics involved in rock mechanics and engineering for years to come

Policy Capacity, Design and the Sustainable Development Goals Andrea Lippi, Theodore N. Tsekos, 2024-07-24 Providing a cross cutting contribution for the achievement of the 2030 Goals this edited collection offers essential guidance for transforming the SDGs from agenda to reality *Fuel Cycle to Nowhere* Richard B. Stewart, Jane B. Stewart, 2011 The origins of the current nuclear waste disposal crisis and directions for future policy Numerical Models in Geomechanics G.N. Pande, S. Pietruszczak, 2002-01-01 The papers in this volume reflect the current research and advances made in the application of numerical methods in geotechnical engineering Topics include instabilities in soil behaviour environmental geomechanics and hydro mechanical coupling in problems of engineering

Nuclear Safety Gianni Petrangeli, 2006-05-30 Nuclear Safety provides the methods and data needed to evaluate and manage the safety of nuclear facilities and related processes using risk based safety analysis and provides readers with the techniques to assess the consequences of radioactive releases The book covers relevant international and regional safety criteria US IAEA EUR PUN URD INI The contents deal with each of the critical components of a nuclear plant and provide an analysis of the risks arising from a variety of sources including earthquakes tornadoes external impact and human factors It also deals with the safety of underground nuclear testing and the handling of radioactive waste Covers all plant components and potential sources of risk including human technical and natural factors Brings together information on nuclear safety for which the reader would previously have to consult many different and expensive sources Provides international design and safety criteria and an overview of regulatory regimes

Features, Events and Processes (FEPs) for Geologic Disposal of Radioactive Waste OECD Nuclear Energy Agency, 2000 This report provides an international compilation of Features Events and Processes FEPs as well as a basis for selecting the FEPs that should be included in safety analyses of radioactive waste disposal sites

Rock Characterisation, Modelling and Engineering Design Methods Xia-Ting Feng, John A. Hudson, Fei Tan, 2013-05-17 Rock Characterisation Modelling and Engineering Design Methods contains the contributions presented at the 3rd ISRM SINOROCK Symposium Shanghai China 1820 June 2013 The papers contribute to the further development of the overall rock engineering design process through the sequential linkage of the three themes of rock characterisation model

Radionuclide Retention in Geologic Media Svensk kärnbränslehantering AB., OECD Nuclear Energy Agency, NEA Project on Radionuclide Migration in Geologic, Heterogeneous Media, Organisation for Economic

Co-operation and Development, 2002 GEOTRAP is the OECD NEA Project on Radionuclide Migration in Geologic Heterogeneous Media carried out in the context of site evaluation and safety assessment of deep repository systems for long lived radioactive waste Retention of radionuclides within the geosphere for prolonged periods is an important safety function of deep geologic disposal concepts for radioactive waste The extent to which retention processes can be relied upon in repository performance assessment depends upon the existence of well established theoretical bases for the processes It also depends on support for the opera

Regulation and Guidance for the Geological Disposal of Radioactive Waste

OECD Nuclear Energy Agency. Organisation for Economic Co-operation and Development, 2010 *One Step at a Time* National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Principles and Operational Strategies for Staged Repository Systems, 2003-03-10 Compared to other large engineering projects geologic repositories for high level waste present distinctive challenges because 1 they are first of a kind complex and long term projects that must actively manage hazardous materials for many decades 2 they are expected to hold these hazardous materials passively safe for many millennia after repository closure and 3 they are widely perceived to pose serious risks As is the case for other complex projects repository programs should proceed in stages One Step at a Time focuses on a management approach called adaptive staging as a promising means to develop geologic repositories for high level radioactive waste such as the proposed repository at Yucca Mountain Nevada Adaptive staging is a learn as you go process that enables project managers to continuously reevaluate and adjust the program in response to new knowledge and stakeholder input Advice is given on how to implement staging during the construction operation closure and post closure phases of a repository program

Getting the books **Geological Disposal Of Radioactive Waste Review Of Developments In The Last Decade** now is not type of inspiring means.
