Geological Highlights Of The West Countr:

Quaternary of South-West England S. Campbell,C.O. Hunt,James D. Scourse,D.H. Keen,N. Stephens,2012-12-06

STRUCTURE OF THE VOLUME AND TERMINOLOGY USED This book contains scientific descriptions of 63 localities Figure A of at least national importance for Quaternary geology geomorphology and environmental change in South West England These sites were selected by the Geological Conservation Review and are accordingly designated GCR sites Chapter 1 provides an introduction to the Quaternary Chapter 2 synthesizes the geomorphological development and Quaternary history of the region and outlines the principles involved in site selection The individual GCR site descriptions form the core of the book In the following chapters sites are arranged and described in broad geographic areas and by research topic This is necessitated by the widely disparate nature of the field evidence in South West England sites demonstrating the full range of Quaternary and geomorphological features are not evenly and conveniently dispersed throughout the region and some areas have significant gaps Neither do the individual chapters contain sites that necessarily equate with particular site selection networks Rather the chosen chapter headings provide the least repetitive means of describing the sites and background material Where possible a chronological approach from oldest to youngest has been used to describe sites within a given chapter Again this approach is not always possible and a group of sites may show variations on landform or Stratigraphic evidence broadly within one major time interval or chronostratigraphic stage inevitably there are many overlaps

Geological Hazards in the UK D.P. Giles, J.S. Griffiths, 2020-06-09 The UK is perhaps unique globally in that it presents the full spectrum of geological time stratigraphy and associated lithologies within its boundaries With this wide range of geological assemblages comes a wide range of geological hazards whether they be geophysical earthquakes effects of volcanic eruptions tsunami landslides geotechnical collapsible compressible liquefiable shearing swelling and shrinking soils geochemical dissolution radon and methane gas hazards or georesource related coal chalk and other mineral extraction An awareness of these hazards and the risks that they pose is a key requirement of the engineering geologist The Geological Society considered that a Working Party Report would help to put the study and assessment of geohazards into the wider social context helping the engineering geologist to better communicate the issues concerning geohazards in the UK to the client and the public This volume sets out to define and explain these geohazards to detail their detection monitoring and management and to provide a basis for further research and understanding **Short Reports** Southern Rhodesia Geological Survey, 1920 **Annual Report of the Geological Survey of Arkansas** Geological Survey of Arkansas, 1891
