

Wicksell tells a story of environmental change. Chicago business scientists study the chemical composition and structure of rocks to understand the conditions in which they formed. Many rocks contain fossils of organisms that were alive when the rock formed. The structure, position, and location of rock can reveal clues about glaciers, floods, animal tracks, and meteorological movements. Some rocks can even be dated.

**Abstract**

Investigations using the Results by Measurement (RBM) type of scale showed higher scores on the measures of interest that focused on the "what a world would be" and related conditions than a range of comparison scales. Because the scales were designed for such a specific purpose, the results confirmed the scale's use when the goal was to assess. However, it was anticipated, as the RBM-type comparison measures are the type of scale used in different areas.
