## Global Warming: A Geological Perspective

**John P. Blumie**  
*State Geologist and Director*  
North Dakota Geological Survey

The average surface temperature of Earth is increasing. Continued increase could cause profound impacts on Earth and its inhabitants (Figure 1).

Figure 1. Many glaciers in North America and Scandinavia, including the two in this photograph (Jostedalsglaciären and Storglaciären in the Torfjella Valley in Sweden), have receded since the early eighteenth century. If global warming continues, glaciers and ice caps will melt, sea level will rise, and many population centers will be submerged. There would likely be an increase in icebergs, which would endanger maritime commerce. The list of possible effects of continued global warming is long and uncertain.
