Geometric Curve Evolution And Image Procebing:

   Geometric Curve Evolution and Image Processing Frédéric Cao,2003-02-27 In image processing motions by curvature provide an efficient way to smooth curves representing the boundaries of objects In such a motion each point of the curve moves at any instant with a normal velocity equal to a function of the curvature at this point This book is a rigorous and self contained exposition of the techniques of motion by curvature The approach is axiomatic and formulated in terms of geometric invariance with respect to the position of the observer This is translated into mathematical terms and the author develops the approach of Olver Sapiro and Tannenbaum which classifies all curve evolution equations He then draws a complete parallel with another axiomatic approach using level set methods this leads to generalized curvature motions Finally novel and very accurate numerical schemes are proposed allowing one to compute the solution of highly degenerate evolution equations in a completely invariant way The convergence of this scheme is also proved   **Scale Space and Variational Methods in Computer Vision** Fiorella Sgallari,Almerico Murli,Nikos Paragios,2007-07-23 This book constitutes the refereed proceedings of the First International Conference on Scale Space Methods and Variational Methods in Computer Vision SSVM 2007 emanated from the joint edition of the 4th International Workshop on Variational Geometric and Level Set Methods in Computer Vision VLSM 2007 and the 6th International Conference on Scale Space and PDE Methods in Computer Vision Scale Space 2007 held in Ischia Italy May June 2007   *Handbook of Image and Video Processing* Alan C. Evans,2007-09-26 Random trees and tree valued stochastic processes are of particular importance in many fields Using the framework of abstract tree like metric spaces and ideas from metric geometry Evans and his collaborators have recently pioneered an approach to studying the asymptotic behavior of such objects when the number of vertices goes to infinity This publication surveys the relevant mathematical background and present some selected applications of the theory **Lectures on Probability Theory and Statistics** Amir Dembo,Tadahisa Funaki,2005-11-03 This volume contains two of the three lectures that were given at the 33rd Probability Summer School in Saint Flour July 6 23 2003 Amir Dembo s course

is devoted to recent studies of the fractal nature of random sets focusing on some fine properties of the sample path of random walk and Brownian motion In particular the cover time for Markov chains the dimension of discrete limsup random fractals the multi scale truncated second moment and the Ciesielski Taylor identities are explored Tadahisa Funaki s course reviews recent developments of the mathematical theory on stochastic interface models mostly on the so called nabla varphi interface model The results are formulated as classical limit theorems in probability theory and the text serves with good applications of basic probability techniques *Entropy Methods for the Boltzmann Equation* ,2007 **Mathematical Foundation of Turbulent Viscous Flows** P. Constantin,Giovanni Gallavotti,Alexandre V. Kazhikhov,Yves Meyer,Seiji Ukai,2006-01-10 Constantin presents the Euler equations of ideal incompressible fluids and the blow up problem for the Navier Stokes equations of viscous fluids describing major mathematical questions of turbulence theory These are connected to the Caffarelli Kohn Nirenberg theory of singularities for the incompressible Navier Stokes equations explained in Gallavotti s lectures Kazhikhov introduces the theory of strong approximation of weak limits via the method of averaging applied to Navier Stokes equations Y Meyer focuses on nonlinear evolution equations and related unexpected cancellation properties either imposed on the initial condition or satisfied by the solution itself localized in space or in time variable Ukai discusses the asymptotic analysis theory of fluid equations the Cauchy Kovalevskaya technique for the Boltzmann Grad limit of the Newtonian equation the multi scale analysis giving compressible and incompressible limits of the Boltzmann equation and the analysis of their initial layers *Statistical learning theory and stochastic optimization* Olivier Catoni,2004 **Weight Filtrations on Log Crystalline Cohomologies of Families of Open Smooth Varieties** Yukiyoshi Nakkajima,Atsushi Shiho,2008-09-15 In this volume the authors construct a theory of weights on the log crystalline cohomologies of families of open smooth varieties in characteristic p 0 by defining and constructing four filtered complexes Fundamental properties of these filtered complexes are proved in particular the p adic purity the functionality of three filtered complexes the weight filtered base change formula the weight filtered K nneth formula the weight filtered Poincar duality and the E2 degeneration of p adic weight spectral sequences In addition the authors state some theorems on the weight filtration and the slope filtration on the rigid cohomology of a separated scheme of finite type over a perfect field of characteristic p 0 Optimal Urban Networks via Mass Transportation Giuseppe Buttazzo,Aldo Pratelli,Sergio Solimini,Eugene Stepanov,2008-12-03 Recently much attention has been devoted to the optimization of transportation networks in a given geographic area One assumes the distributions of population and of services workplaces i e the network s sources and sinks are known as well as the costs of movement with without the network and the cost of constructing maintaining it Both the long term optimization and the short term who goes where optimization are considered These models can also be adapted for the optimization of other types of networks such as telecommunications pipeline or drainage networks In the monograph we study the most general problem settings namely when neither the shape nor even the

topology of the network to be constructed is known a priori **Scale Space and Variational Methods in Computer Vision** Xue-Cheng Tai,Knut Morken,Marius Lysaker,Knut-Andreas Lie,2009-05-25 This book constitutes the refereed proceedings of the Second International Conference on Scale Space Methods and Variational Methods in Computer Vision SSVM 2009 emanated from the joint edition of the 5th International Workshop on Variational Geometric and Level Set Methods in Computer Vision VLSM 2009 and the 7th International Conference on Scale Space and PDE Methods in Computer Vision Scale Space 2009 held in Voss Norway in June 2009 The 71 revised full papers presented were carefully reviewed and selected numerous submissions The papers are organized in topical sections on segmentation and detection image enhancement and reconstruction motion analysis optical flow registration and tracking surfaces and shapes scale space and feature extraction **Calculus of Variations and Nonlinear Partial Differential Equations** Luigi Ambrosio,E. Mascolo,2008-01-02 With a historical overview by Elvira Mascolo Stable Approximate Evaluation of Unbounded Operators C. W. Groetsch,2007 Spectral theory of bounded linear operators teams up with von Neumann s theory of unbounded operators in this monograph to provide a general framework for the study of stable methods for the evaluation of unbounded operators An introductory chapter provides numerous illustrations of unbounded linear operators that arise in various inverse problems of mathematical physics Before the general theory of stabilization methods is developed an extensive exposition of the necessary background material from the theory of operators on Hilbert space is provided Several specific stabilization methods are studied in detail with particular attention to the Tikhonov Morozov method and its iterated version **Local and Semi-Local Bifurcations in Hamiltonian Dynamical Systems** Heinz Hanßmann,2006-10-18 This book demonstrates that while elliptic and hyperbolic tori determine the distribution of maximal invariant tori they themselves form n parameter families Therefore torus bifurcations of high co dimension may be found in a single given Hamiltonian system absent untypical conditions or external parameters The text moves logically from the integrable case in which symmetries allow for reduction to bifurcating equilibria to non integrability where smooth parametrisations must be replaced by Cantor sets **Stochastic Geometry** W. Weil,A. Baddeley,I. Bárány,R. Schneider,2006-10-26 Stochastic Geometry is the mathematical discipline which studies mathematical models for random geometric structures This book collects lectures presented at the CIME summer school in Martina Franca in September 2004 The main lecturers covered Spatial Statistics Random Points Integral Geometry and Random Sets These are complemented by two additional contributions on Random Mosaics and Crystallization Processes The book presents a comprehensive and up to date description of important aspects of Stochastic Geometry **Inverse Problems and Imaging** Ana Carpio,Oliver Dorn,Miguel Moscoso,Frank Natterer,George C. Papanicolaou,2008-04-17 In the CIME Summer School on Imaging experts in mathematical techniques and applications presented useful introductions to many aspects of the field This volume contains updated lectures as well as additional contributions on other related topics **The Art of Random Walks** Andras Telcs,2006-05-17 Einstein proved that the mean

square displacement of Brownian motion is proportional to time He also proved that the diffusion constant depends on the mass and on the conductivity sometimes referred to Einstein s relation The main aim of this book is to reveal similar connections between the physical and geometric properties of space and diffusion This is done in the context of random walks in the absence of algebraic structure local or global spatial symmetry or self similarity The author studies the heat diffusion at this general level and discusses the following topics The multiplicative Einstein relation Isoperimetric inequalities Heat kernel estimates Elliptic and parabolic Harnack inequality
