Kazarinoff, 1961 Anybody who liked their first geometry course and some who did not will enjoy the simply stated geometric problems about maximum and minimum lengths and areas in this book Many of these already fascinated the Greeks for example the problem of enclosing the largest possible area by a fence of given length and some were solved long ago but others remain unsolved even today Some of the solutions of the problems posed in this book for example the problem of inscribing a triangle of smallest perimeter into a given triangle were supplied by world famous mathematicians other by high school students Analytic and Geometric Inequalities and Applications Themistocles RASSIAS, Hari M. Srivastava, 2012-12-06 Analytic and Geometric Inequalities and Applications is devoted to recent advances in a variety of inequalities of Mathematical Analysis and Geometry Subjects dealt with in this volume include Fractional order inequalities of Hardy type differential and integral inequalities with initial time difference multi dimensional integral inequalities Opial type inequalities Gruss inequality Furuta inequality Laguerre Samuelson inequality with extensions and applications in statistics and matrix theory distortion inequalities for analytic and univalent functions associated with certain fractional calculus and other linear operators problem of infimum in the positive cone α quasi convex functions defined by convolution with incomplete beta functions Chebyshev polynomials with integer coefficients extremal problems for polynomials Bernstein's inequality and Gauss Lucas theorem numerical radii of some companion matrices and bounds for the zeros of polynomials degree of convergence for a class of linear operators open problems on eigenvalues of the Laplacian fourth order obstacle boundary value problems bounds on entropy measures for mixed populations as well as controlling the velocity of Brownian motion by its terminal value A wealth of applications of the above is also included We wish to express

Arnold,2010-11-25 This book s first edition has been widely cited by researchers in diverse fields The following are excerpts from reviews Inequalities Theory of Majorization and its Applications merits strong praise It is innovative coherent well written and most importantly a pleasure to read This work is a valuable resource Mathematical Reviews The authors present an extremely rich collection of inequalities in a remarkably coherent and unified approach The book is a major work on inequalities rich in content and original in organization Siam Review The appearance of Inequalities in 1979 had a great impact on the mathematical sciences By showing how a single concept unified a staggering amount of material from widely diverse disciplines probability geometry statistics operations research etc this work was a revelation to those of us who had been trying to make sense of his own corner of this material Linear Algebra and its Applications This greatly expanded new edition includes recent research on stochastic multivariate and group majorization Lorenz order and applications in physics and chemistry in economics and political science in matrix inequalities and in probability and statistics The reference list has almost doubled *Selected Topics in Geometry with Classical Vs. Computer Proving* Pavel Pech,2007 This textbook presents various automatic techniques based on Gr bner bases elimination to prove well known geometrical theorems and formulas Besides proving theorems these methods are used to discover new formulas solve geometric inequalities and construct

objects which cannot be easily done with a ruler and compass Each problem is firstly solved by an automatic theorem proving method Secondly problems are solved classically without using computer where possible so that readers can compare the strengths and weaknesses of both approaches

Spectral Geometry of Partial Differential Operators

Michael Ruzhansky, Makhmud Sadybekov, Durvudkhan Suragan, 2020-02-07 The aim of Spectral Geometry of Partial Differential Operators is to provide a basic and self contained introduction to the ideas underpinning spectral geometric inequalities arising in the theory of partial differential equations Historically one of the first inequalities of the spectral geometry was the minimization problem of the first eigenvalue of the Dirichlet Laplacian Nowadays this type of inequalities of spectral geometry have expanded to many other cases with number of applications in physics and other sciences The main reason why the results are useful beyond the intrinsic interest of geometric extremum problems is that they produce a priori bounds for spectral invariants of partial differential operators on arbitrary domains Features Collects the ideas underpinning the inequalities of the spectral geometry in both self adjoint and non self adjoint operator theory in a way accessible by anyone with a basic level of understanding of linear differential operators Aimed at theoretical as well as applied mathematicians from a wide range of scientific fields including acoustics astronomy MEMS and other physical sciences Provides a step by step guide to the techniques of non self adjoint partial differential operators and for the applications of such methods Provides a self contained coverage of the traditional and modern theories of linear partial differential operators and does not require a previous background in operator theory
