Emergence Of Ecological Modernisation Integrating The Environment And Economy:

The Emergence of Ecological Modernisation Mr Stephen C Young, 2018-10-24 The Emergence of Ecological Modernisation offers a wealth of empirical research material from an international perspective bringing together previously scattered sources for the first time. It addresses a series of theoretical issues that are of key contemporary relevance such as the relationship between ecological modernisation and sustainable development strategies for promoting ecological modernisation and the extent to which it is possible to green contemporary capitalism. *Ecological Modernisation and Environmental Compliance* Shahpar Selim, 2013-02-01 Economic development that is environmentally socially and ethically sound is at the forefront of contemporary debates all over the world. This is especially relevant to international trade where goods manufactured in least developed countries (LDCs) are being exported to developed countries (DCs) via international supply chains. This book looks at Bangladesh's ready-made garments (RMG) industry, the seventh largest in the world, facing demands for environmental and social management according to standards set by consumers in environmentally progressive societies. Apart from these concerns, not having found cultural or institutional resonance in Bangladesh, the pressures for cost reduction on time delivery and cheap labour in a highly competitive international market make the problem that much more complex. In this book, Selim uses the analytical framework provided by the ecological modernisation theory to examine the economic, communicative and social-political aspects of ethical trade and argues that the economy-ecology relationship can indeed be a positive-sum game if nation-states and economic actors change their policymaking styles and greening behaviour to take advantage of scientific evidence and green technological opportunities. **Environment, Modernization and Development in East Asia** Ts'ui-jung Liu, James Beattie, 2016-04-08 Environment Modernization and Development in East Asia critically examines modernization's long-term environmental history. It suggests new frameworks for understanding as inter-related processes environmental, social and economic change across China and Japan. *International Encyclopedia of Environmental Politics* John Barry, E. Gene Frankland, 2014-02-25 Why care about the environment? Is the earth's climate really changing for the worse? What are CFCs exactly? And who or what is the WTO? What are the causes of environmental problems? Who are the main actors and what are the main ideas and issues in international environmental politics? Which countries have the best/worst environmental record and policies? The International Encyclopedia of Environmental Politics is the essential reference source to enable all those with an interest in the politics of the environment, particularly students and academics working within political science, to answer these questions and to explore many other related topics in international environmental politics. as reforms to the system of prudential regulation that currently governs this sector Beyond the focus on the financial services sector the book raises complex questions regarding the relationship between the state and market institutions in environmental policy and will appeal to scholars from a wide range of disciplines interested in problems of environmental governance

Ideology, Social Theory, and the Environment William D. Sunderlin, 2003 Does human population growth threaten the environment or does it guarantee we will safeguard it Is economic growth the key ecological problem or is it in fact the solution What will be the leading force to save the planet civil society government or private enterprise This book shows that these polemical debates are governed not so much by access to facts as they are by the political ideology of the expert advancing a particular argument Moreover the thoughts of these experts tend to be based largely in just one of three competing streams of political thought the left the center or the right Drawing on social theory the author explains the philosophical origins of this tendency to rely on just one of three traditions and why this poses a serious obstacle to conceptualizing the cause nature and resolution of environmental problems Sunderlin argues that laying the foundation for a livable world involves giving conscious and dedicated attention to the core tenets of all three political traditions action against class inequality and advocacy of social justice within and among countries reformation of laws and policies emanating from the halls of power and technological innovation in centers of research and wholesale cultural change and promotion of individual initiative responsibility and creativity

The Green State Robyn Eckersley, 2004-03-05 What would constitute a definitively green state In

this important new book Robyn Eckersley explores what it might take to create a green democratic state as an alternative to the classical liberal democratic state the indiscriminate growth dependent welfare state and the neoliberal market focused state seeking she writes to navigate between undisciplined political imagination and pessimistic resignation to the status quo In recent years most environmental scholars and environmentalists have characterized the sovereign state as ineffectual and have criticized nations for perpetuating ecological destruction Going consciously against the grain of much current thinking this book argues that the state is still the preeminent political institution for addressing environmental problems States remain the gatekeepers of the global order and greening the state is a necessary step Eckersley argues toward greening domestic and international policy and law The Green State seeks to connect the moral and practical concerns of the environmental movement with contemporary theories about the state democracy and justice Eckersley s proposed critical political ecology expands the boundaries of the moral community to include the natural environment in which the human community is embedded This is the first book to make the vision of a good green state explicit to explore the obstacles to its achievement and to suggest practical constitutional and multilateral arrangements that could help transform the liberal democratic state into a postliberal green democratic state Rethinking the state in light of the principles of ecological democracy ultimately casts it in a new role that of an ecological steward and facilitator of transboundary democracy rather than a selfish actor jealously protecting its territory
