Hardware/Software Architectures for Low-Power Embedded Multimedia Systems Muhammad Shafique,Jörg Henkel,2011-07-25 This book presents techniques for energy reduction in adaptive embedded multimedia systems based on dynamically reconfigurable processors The approach described will enable designers to meet performance area constraints while minimizing video quality degradation under various run time scenarios Emphasis is placed on implementing power energy reduction at various abstraction levels To enable this novel techniques for adaptive energy management at both processor architecture and application architecture levels are presented such that both hardware and software adapt together minimizing overall energy consumption under unpredictable design compile time scenarios

Embedded Computer Systems: Architectures, Modeling, and Simulation Timo D. Härmäläinen,Andy D. Pimentel,Jarmo Takala,Stamatis Vassiliadis,2005-07-11 The SAMOS workshop is an international gathering of highly qualified researchers from academia and industry sharing in a 3 day lively discussion on the quiet and spiring northern mountainside of the Mediterranean island of Samos As a tradition the workshop features workshop presentations in the morning while after lunch all kinds of informal discussions and nut cracking gatherings take place The workshop is unique in the sense that not only solved research problems are presented and discussed but also partly unsolved problems and in depth topical reviews can be

unleashed in the scientific arena. Consequently, the workshop provides the participants with an environment where collaboration rather than competition is fostered. The earlier workshops SAMOS I-IV (2001-2004) were composed only of invited presentations. Due to increasing expressions of interest in the workshop, the Program Committee of SAMOS V decided to open the workshop for all submissions. As a result, the SAMOS workshop gained an immediate popularity; a total of 114 submitted papers were received for evaluation. The papers came from 24 countries and regions: Austria 1, Belgium 2, Brazil 5, Canada 4, China 12, Cyprus 2, Czech Republic 1, Finland 15, France 6, Germany 8, Greece 5, Hong Kong 2, India 2, Iran 1, Korea 24, The Netherlands 7, Pakistan 1, Poland 2, Spain 2, Sweden 2, Taiwan 1, Turkey 2, UK 2, and USA 5. We are grateful to all of the authors who submitted papers to the workshop.

Digital Media Processing Hazarathaiah Malepati, 2010-06-25. Multimedia processing demands efficient programming in order to optimize functionality. Data image, audio, and video processing, some or all of which are present in all electronic devices today, are complex programming environments. Optimized algorithms, step by step directions, are difficult to create but can make all the difference when developing a new application. This book discusses the most current algorithms available that will maximize your programming, keeping in mind the memory and real-time constraints of the architecture with which you are working. A wide range of algorithms is covered, detailing basic and advanced multimedia implementations along with cryptography, compression, and data error correction. The general implementation concepts can be integrated into many architectures that you find yourself working with on a specific project. Analog Devices BlackFin technology is used for examples throughout the book. Discusses how to decrease algorithm development times to streamline your programming. Covers all the latest algorithms needed for constrained systems. Includes case studies on WiMAX, GPS, and portable media players.

Embedded Software: Know It All Jean J. Labrosse, 2007-09-14. Embedded software is present everywhere, from a garage door opener to implanted medical devices to multicore computer systems. This book covers the development and testing of embedded software from many different angles and using different programming languages.

Embedded Multimedia Security Systems Amit Pande, Joseph Zambreno, 2012-09-12. Opening with a detailed review of existing techniques for selective encryption, this text then examines algorithms that combine both encryption and compression. The book also presents a selection of specific examples of the design and implementation of secure embedded multimedia systems. Features reviews the historical developments and latest techniques in multimedia compression and encryption, discusses an approach to reduce the computational cost of multimedia encryption while preserving the properties of compressed video, introduces a polymorphic wavelet architecture that can make dynamic resource allocation decisions according to the application requirements, proposes a light-weight multimedia encryption strategy based on a modified discrete wavelet transform, describes a reconfigurable hardware implementation of a chaotic filter bank scheme with enhanced security features, presents an encryption scheme for image and video data based on chaotic arithmetic coding.
