Embedding Education Into Diabetes Practice M. Porta, V. Miselli, Massimo Porta, M. Trento, V. Jorgens, 2005 The current epidemics of diabetes obesity and related disorders makes lifestyle modification paramount in preventive and therapeutic interventions This volume describes the rationale history methodologies and current international recommendations that make education an integral part of modern diabetes care It also contains updated reports of results of clinical trials and or practical experiences in North America the Netherlands Germany and Italy Descriptions are given of the methods used both in general practice and in the hospital setting to train patients on among others nutrition self care and prevention of disease complications Studies on the economic impact of patient education have until now been conspicuously missing and a cost efficacy analysis of the Group Care approach developed in Italy is presented here The last chapter offers a look into the future describing how similar principles could also be embedded successfully in the care of people suffering from chronic diseases other than diabetes The present volume of *Frontiers in Diabetes* will be of particular interest to all health care providers involved in the daily management of patients with diabetes or other chronic diseases

Proteins, Pathologies and Politics David Gentilcore, Matthew Smith, 2018-12-13 *Proteins Pathologies and Politics* presents an international and historical approach to dietary change and health contrasting current concerns with how issues such as diabetes cancer vitamins sugar and fat and food allergies were perceived in the 19th and 20th centuries Though what we eat and what we shouldn't eat has become a topic of increased scrutiny in the current century the link between dietary innovation and health disease is not a new one From new fads in foodstuffs through developments in manufacturing and production processes to the inclusion of additives and evolving agricultural practices changing diet changes often promised better health only to become associated with the opposite With contributors including Peter Scholliers Francesco Buscemi Clare Gordon Bettencourt and Kirsten Gardner this collection comprises the best scholarship on how we have perceived diet to affect health The chapters consider the politics and economics of dietary change the historical actors involved in dietary innovation and the responses to it the extent that our dietary health itself a cultural construct or even a product of history This is a fascinating and varied study of how our diets have been shaped and influenced by perceptions of health and will be of great value to students of history food history nutrition science politics and sociology

Monogenic Hyperinsulinemic Hypoglycemia Disorders C. A. Stanley, D. D. De León, 2012-02-16 In this volume of *Frontiers in Diabetes* dealing with the molecular basis of monogenic disease of beta cell insulin regulation world renowned experts provide in depth descriptions of the many recent advances in genetic defects that cause hyperinsulinemic hypoglycemia These disorders comprise the most

important form of hypoglycemia in infants and children and are associated with a high risk of morbidity including seizures and severe brain injury The discovery of eight different genetic loci involved in congenital hyperinsulinism has led to greatly improved methods of diagnosis and treatment New approaches to diagnosis are highlighted such as 18F DOPA PET scans for preoperative localization of focal hyperinsulinism as well as potential new treatments such as green tea polyphenols for GDH HI and GLP receptor antagonists for SUR1 and Kir6.2 hyperinsulinism Practitioners including pediatricians and specialists in endocrinology surgery genetics pathology and radiology will find important up to date information for clinical diagnosis management and new treatments for infants and children with congenital hyperinsulinism Researchers will discover how genetic hyperinsulinism disorders provide novel insights into the basic mechanisms regulating insulin secretion not only in diabetics but also in healthy humans

Experimental Approaches to Diabetic Retinopathy H. -P. Hammes, M.

Porta, 2009-11-24 This volume sets the stage for clinical experts working with diabetic patients as well as for researchers by describing the clinical presentations of retinopathy and their anatomical and functional correlates It reviews currently available experimental models in animals The impact of retinal pericytes neuroglia and specifically Müller cells are discussed in detail The volume addresses a variety of current scientific discussions about mechanisms of damage such as growth factors and the VEGF/PEDF balance in the diabetic eye the ocular renin-angiotensin system and leukocyte interactions with the microvasculature among others Stem and progenitor cells in the retina are discussed as potential directions for future investigation The final chapters return to emerging clinical aspects including current approaches to retinopathy as a predictor of cardiovascular risk and how knowledge can be translated from bench to bedside Bridging a widening gap in medical research between basic scientists who may lose sight of the clinical presentations and clinical researchers who may grow unaware of the limits of experimental models this volume serves as a reference platform for endocrinologists diabetologists ophthalmologists as well as for scientists involved in clinical and basic research in diabetic retinopathy and other vascular complications of diabetes
